An experimental relation between soil emittance (E) at L-band and soil surface moisture content (M) is compared with a theoretical one. In order to convert emittance values, as derived from remote sensing, into water content values it does not seem necessary to determine the E-M relation experimentally for all soil types. An estimate of the clay percentage of the soil within 10 percent should suffice to calculate the volumetric moisture content of the top 0-2 cm with 0.02 cu m per cu m accuracy. If the estimated values of M are used in a hydrological model, in which the soil hydraulic properties also have to be known or estimated, the requirement of knowing the clay fraction within 10 percent is not restrictive. The soil dielectric constant is a function of both soil moisture content and of soil texture. (Peters-PTT)

SATELLITE THERMAL OBSERVATION OF OIL SLICKS ON THE PERSIAN GULF,
Japan Marine Science and Technology Center, Yokosuka.
I. Asanuma, K. Muneyama, Y. Sasaki, J. Lisaka, and Y. Yasuda.
Remote Sensing of Environment RSEEA7, Vol. 19, No. 2, p 171-186, April 1986. 3 tab, 3 fig, 17 ref.

Descriptors: *Remote sensing, *Oil slicks, *Satellite technology, *Radiometry, *Persian Gulf, Seawaters, Thermal channel, Thermal inertia, Sea surface temperature, Diurnal variation.

The images of the Advanced Very High Resolution Radiometer (AVHRR) carried on the NOAA-7 were collected from the end of March 1983 to the beginning of July 1983 for the detection of oil slicks on the Persian Gulf. The visible channels showed the possibility of detecting smog from the Nowruz oil fields. The thermal channel showed the distribution of sea surface temperature obtained after the atmospheric correction using the empirical equation by two thermal channels. The apparent thermal inertia, computed from the difference of sea surface temperature between the daytime and the nighttime, showed the possibility of oil slick detection, where it was difficult to detect oil slicks from the temperature difference between oil slicks and sea water in one observation. The apparent thermal inertia was computed on several points which may correspond to the same target among continuous observations. As a result, oil slicks showed a small apparent thermal inertia and sea water showed a large one. This means that oil slicks have smaller resistance to thermal change than sea water. Sea surface temperature used for computing the apparent thermal inertia was obtained through an atmospheric correction with an empirical equation which uses an energy difference between two thermal channels of the AVHRR.

Although there was an ambiguity on the selection of the same object on a water body, the computed apparent thermal inertia showed the possibility of oil slick detection from sea water. (Peters-PTT)

METHOD FOR USING COMPUTERIZED CUSTOMER INFORMATION IN WATER DISTRIBUTION NETWORK MODELS,

Newcastle and Gateshead Water Co., Newcastle-upon-Tyne (England).
D. G. Shore.
Institute of Water Engineers and Scientists, Journal, Vol. 40, No. 2, p 131-138, April 1986. 1 fig, append.

Descriptors: *Networks, *Computer models, *Metered consumption, *Water company, *England, Watnet simulation program, Computer programs, Urban areas, Rural areas.

The Watnet Simulation Program was developed by the Newcastle and Gateshead Water Company (United Kingdom), for determining and maintaining base load information used in the network analysis of water distribution systems. The method utilizes customer records to assess the number of unmetered connections and annual metered consumption within load areas defined by network models. The postal code of each customer is used as the geographical reference between network models and the customer data base. In an urban area examined, the number of open connections within the area was found to be within 1% of that determined by traditional physical counting of houses. In a rural area, the computerized system produced a lower number of unmetered connections than a physical count. An appendix lists the computer programs developed by the water company, including their language, purpose, input, output, and operation. (Rochester-PTT)

ADVANCES IN HYDROMETRY.

Institute of Hydrology, Wallingford (England).
Available from the IAHS, 2000 Florida Ave., NW, Washington, DC. 20009, Price: $30.00. IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. Edited by J.A. Cole. 359 p.

Descriptors: *Hydrometry, *Hydrometers, *Tracers, *Discharge measurement, *Networks, Gages, Flowmeters, Flow velocity, Mathematical models, Satellite technology, Bubble gages.

This symposium was organized by the International Association of Hydrological Sciences' International Commission on Surface Water and sponsored by the World Meteorological Organization (WMO). WMO is concerned with the establishment of hydrometric networks and the collection and application of hydrometric data, in particular in relation to its Hydrological Operation Multipurpose Sub-program (HOMS). The symposium presents 32 papers covering the following six topics: discharge measurement by the current metering and by gauging structures, discharge measurement by the moving boat and related techniques, float and tracer techniques, discharge measurement by ultrasonic and electromagnetic techniques, hydrometry in the electronic age, and regional hydrometry. HYDROMETRIC CABLEWAYS IN THE YANGTZE VALLEY,

Yangtze Valley Planning Office, Wuhan (China).
C. Youlie, and Z. Guozhen.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 7-17, 7 fig, 2 tab, 3 ref.

Descriptors: *Stream discharge, *Discharge measurement, *Stream gages, *Flashy streams, *Hydrometric cableways, Flow discharge, Hydrometry, Sediment discharge, Remote sensing, Measuring instruments, Yangtze Valley.

The hydrometric cableway is the principal measuring device in the Yangtze Valley for the gaging of discharge in deep, swiftly flowing, and violently fluctuating streams. This paper describes technical problems which have to be studied and resolved when the cableway is used. Topics covered are the layout of the cable, principles and methods of depth measurement using a sounding weight, methods for eliminating the effects of cable vibration, signal transmission and remote operation for velocity, depth, and sediment measurements. Correction for oblique angle of suspension of the cable takes into consideration the droop of the main cable, the rise of the hanging point, and the variation of curve length. Use of the powered winch and silicon controlled speed regulator eliminates cable oscillation and increases accuracy of positioning and measuring. In order to apply the ultrasonic sounding method to cableways, some problems need to be recognized. The insulated wire used for conducting sound impulses suffers extraneous influences of water flowing past it. The echo sounder can be used for both measuring water depth of verticals and positioning observation points. It is also difficult to position observation points in shallow streams. To solve the above problems, water body and steel cable are used as the conducting circuit. (See also W86-04785) (Geiger - PTT)
W86-04786

FLOW MEASUREMENT IN OPEN AND CLOSED CONDUITS OF GRAVITATIONAL URBAN STORM SEWER NETWORKS,

Vizgazdalkodasi Tudomanyos Kutato Intezet, Budapest (Hungary).
A. Borzsonyi.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-20, 1982, Exeter, England. p 19-23, 2 fig, 2 ref.

Descriptors: *Unsteady flow, *Storm sewers, *Flow measurement, *Flowmeters, *Telemetry, Sewers, Sewer systems, Flow rates, Flow discharge, Conduits, Hydrometers, Hydrometry, Hydrometric equipement.

The analytical investigation of unsteady flow phenomena in gravitational urban sewer networks is essential for the proper dimensioning, hydraulic analysis and operation of the network. Regular records of measurement data form the basis of such investigations. The construction and functions of a computer-based automatic data collection system installed along a selected section of the storm sewer network at Pecs in South-Hungary are described. The system involves the telemetry of water levels, pressure heads and flow rates at specific points of the network, as well as of precipitation at six points in the basin. A structure of special design involving lateral constriction has been developed for the measurement of levels, heads and flow rates, which is equally suited to measurement in open and closed conduits. Provision had to be made for passing sediments and solid pollutants as well. The technique and evaluation of flow measurement in open and closed conduits are described. The data are computer-processed on the basis of calibrated rating curves. (See also W86-04785) (Author's abstract)

CURRENT METER CALIBRATION - INDIVIDUAL RATING VERSUS GROUP RATING,

Department of the Environment, Reading (England). Water Data Unit.
R. W. Herschy.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-20, 1982, Exeter, England. p 25-36, 3 tab, 10 ref, 3 append.

Descriptors: *Water metering, *Cost analysis, *Calibrations, *Water costs, Gages, Performance evaluation, Comparison studies, Error analysis, Hydrometric equipment.

The cost of the individual rating of current meters is expensive and is likely to increase substantially in the future. Both International and British standards make provision for current meters to be used with either an individual rating or a group rating. Previous work in this field by Lambie, Smoot, Carter, and Grindley are summarized. Joint conclusions confirm that the use of an individual rating for each meter, changing every time the meter is rated, cannot be justified, and the use of a rating derived from the mean of a fairly large group of ratings of different meters of the same type is preferred. Strict control of manufacturer's tolerances would be an essential requirement for the implementation of a group rating. The adoption of a group rating need not reduce the accuracy or current meter gagings; the cost saving of a group rating however is significant. (See also W86-04785) (Geiger - PTT)
W86-04788

UP-DATING OF DISCHARGE RATING CURVES BY MEANS OF MATHEMATICAL MODELS,

Institut fuer Wasserwirtschaft, Berlin (German D.R.).
A. Becker, M. Melcher, and G. Kose.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 37-48, 4 fig, 8 ref.

Descriptors: *Mathematical models, *Discharge measurement, *Flow discharge, *Streamflow forecasting, *Mathematical studies, Models, Flow measurement, Discharge hydrographs, Gages, Streamflow, Rivers, Running waters, Routing.

A centralized computerized streamflow forecasting system was developed for the River Elbe and for the downstream reaches of its main tributaries in the GDR to provide daily streamflow forecasts for up to 23 gaging stations. An appropriate combination of precise flow measurements at selected well-established river gaging stations with flow computations along the river by means of mathematical models (streamflow routing techniques) aided in monitoring and up-dating discharge rating curves at all gaging stations along the river. It also allowed for extrapolation of results of precise flow measurements performed at one or a few selected stations, under critical flood conditions, to neighboring stations, and helped to avoid water balance discrepancies along the river. W86-04789

METHOD FOR UNIFORMIZING THE STAGE-DISCHARGE RELATIONS OF STABLE RIVER BEDS AND ITS APPLICATION,

Yangtze Valley Planning Office, Wuhan (China).
G. Weiya, L. Xueqi, and T. Peiwen.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 49-61, 1 fig, 4 tab.

Descriptors: *Discharge hydrographs, *Discharge measurement, *River beds, *Mathematical models, *Uniformity coefficient, Hydrometry, Gaging stations, Gaging, Regression analysis, Mathematical studies, Automation, Data processing, Computers, Stage-discharge relations, Stages.

A parabolic optimum mathematical model for uniformizing the stage-discharge relations of stable river beds is presented and applied to methods of automatic processing and simplification of data collection at gaging stations. A hyperbolic simulation model and a multivariate linear stepwise regression optimum model for performing the same functions are also described. The objects of uniformizing the complex rating curves for stable river beds are those of giving a clear conception, of providing a simple appropriate adjusting method, and of taking this method as a basis for solving the principle problems concerned in automatic processing. Uniformization provides a basis for reducing the number of measurements and makes continuous-record stations obsolete, or changes them into

record stations where data at yearly intervals are collected. Uniformization makes it possible to improve the measurement of discharge and allows gaging stations to be visited only periodically in sequence. It also privdes a new way of simplifying the complex loop rating for hydrological design and forecasting. (See also W86-04785) (Geiger - PTT)

MULTILAYER WIDTH-INTEGRATED VELOCITY MEASUREMENT METHOD,

Fujian Provinicial Hydrometric Station, Fuzhou (China).
C. Rihua.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 75-85, 3 fig, 2 tab.

Descriptors: *Flow velocity, *Flow measurement, *Hydrometry, *Mathematical studies, Flow profiles, Flow characteristics, Mathematical models, Flowmeters, Gages, Running waters, Rivers.

The multilayer width-integrated velocity measurement method (MVIVMM) is an innovation in current meter design. The cross section of the river is divided into 4 or 5 layers: the meter (which is suspended from a cable) is drawn across each layer at a constant rate while it makes continuous with-integrated velocity measurements. This contrasts with the standard method in which velocities are determined at fixed points along a series of verticals. The MWIVMM has the advantage of measuring the mean velocity of each individual layer of the cross section: since the operation saves about two-thirds of the time needed for the standard method it may prove an attractive competitor, especially on rivers with rapidly changing stages. MOVING BOAT DISCHARGE MEASUREMENTS USING ACOUSTIC DOPPLER TECHNIQUES,

Geological Survey, NSTL Station, MS. Gulf Coast Hydroscience Center.
V. R. Schneider, and R. H. Billings.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 87-92, 5 ref.

Descriptors: *Acoustics, *Flow discharge, *Flow measurement, *Boats, *Flow velocity, Hydrometry, Discharge hydrographs, Discharge measurement, Flowmeters, Rivers, Running waters.

Moving-boat techniques using conventional equipment have been tested and established. Discharge is computed on the basis of cross-section geometry, current meter readings, and flow angles relative to shrore-based targets. Recent developments in acoustic Doppler technology promise a new and potentially superior approach. The acoustic system uses a single transducer array to probe the water column beneath a moving boat and processes echoes from the water mass and bottom into sectional area and velocity measurements. Total discharge across a straight line between the starting and ending points of the boat travel is computed by integration. Feasibility tests are being conducted in the Mississippi River near Baton Rouge, Louisiana. Discharge measurements will be independently made with current meter, conventional moving boat, and acoustic Doppler techniques. (See also W86-04785) (Author's abstract)

DEVELOPMENTS IN HYDROMETRY IN INDIA,

Central Water Commission, New Delhi (India).
S. K. Haldar.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 93-100, 4 fig, 1 tab.

Descriptors: *Flood discharge, *Flood hydrographs, *Flow discharge, *India, *Indirect flood measurement, *Discharge measurement, Discharge hydrographs, Hydrometry, Flowmeters, Flow measurement, Flood profiles, Flow velocity, Mannings equation, Chezy equation, Running waters, Manning's equation.

Measurement of high flood discharge in India is subject to many complications. The most difficult operation while observing high discharge is: the accurate positioning of the boat at the point of measurement, accurate determination of depth, and placing the current meter at the point of measurement in the vertical. A high-powered motor launch has been provided at almost all the important measurement sites. Fish weights are used whenever it is possible to measure the depth by suspension cable and weights. Correction factors are used to compensate for drift of the boat. Discharge measurements by the moving-boat method are conducted at some of the important sites during flood periods and experience has shown that this method is both quick and reliable. When the river is in high flood and it is extremely difficult to enter the river either with the held of motor launch or cable-way, the velocity is measured with the help of floats. Indirect peak discharge estimation is usually carried out by the slope-area method. In India, Manning's equation is used for estimation of discharge on account of its simplicity. DESIGN AND STUDY OF THE INSTRUMENTATION REQUIRED FOR THE MEASUREMENT OF DISCHARGE BY THE MOVING BOAT METHOD,

Water Conservancy Hydroelectric Power Scientific Research Inst., Beijing (China).
W. Hongli.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 101-108, 3 fig, 1 ref, 1 append.

Descriptors: *Discharge measurement, *Flow discharge, *Flow measurement, *Flow velocity, *Flowmeters, Discharge hydrographs, Hydrometry, Design criteria, Gages.

The instruments and equipment developed for the measurement of discharge by the moving boat method are described and compared with those in ISO-4369; future development is also discussed. The basic equipment consists of a propeller-type current meter with a photo-electric velocity sensor which generates 24 pulse signals for a turn, an angle indicator with a magnetic synchronous inductor, and an improved echo sounder. The remaining instrumentation is automatic, and includes simultaneous operation and synchronous recording. (See also W86-004785) (Author's abstract)

FLOOD FLOW GAUGING WITH TRITIUM IN SOUTHERN AFRICA,

Ministry of Water Development, Salisbury (Zimbabwe). Hydrological Branch.
P. Wurzel, and P. R. B. Ward.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 119-128, 3 fig, 2 tab, 11 ref.

Descriptors: *Tritium, *Radioactive tracers, *Flood hydrographs, *Rivers, *Flood profiles, Hydrometry, Gages, Flood forecasting, Tracers, Running waters, Ward's equation.

Tritiated water has been in routine use for a number of years in Zimbabwe for measuring flood flows by the dilution method. The advantages of using the dilution method instead of current meter gagings in the kinds of ephemeral rivers, with difficult access that exist in Zimbabwe, are the availability of a liquid scintillation counter and a trained technician for carrying out the measurements, and the low cost of the tritiated water compared to other chemicals. Tritiated water ampules, housed in a small cartridge, are shot into midstream by the use of a mortar. Samples are taken at regular intervals at predetermined sampling stations. Approximate rules for forecasting tracer arrival times and tracer transit durations are useful in planning the execution of the measurements. Ward's equation is used to compute mixing distances and is found to give good approximate predictions of desirable injection point to sampling point distances. (See also W86-04785) (Geiger - PTT)

TRACER MEASUREMENTS IN LOWLAND RIVERS,

Vrije Univ., Brussels (Belgium). Lab. of Hydrology.
W. Bauwens, J. Bellon, and A. van der Beken.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 129-139, 5 fig, 2 tab, 12 ref.

Descriptors: *Tracers, *Dye releases, *Adsorption, *Alluvium, *Organic matter, *Rivers, Sediments, Fluvial sediments, Flow discharge, Flow velocity, Discharge measurement, Mathematical equations, Hydrometry, Running waters.

Comparative travel time measurements were carried out in a river with alluvial sediment and organic material to study the influence of adsorption of fluorescent tracers on the travel time determination. Three types of dyes were used: rhodamine B, rhodamine WT and sulpho-rhodamine B. The results show that adsorption can influence the travel time derived from the concentration curve, especially if the centroid of this curve is used. The relationship between discharge and velocity was examined. For higher discharges the velocity tends to a limit. Measured and calculated values of effective dispersion coefficients are compared. TWO LESS CONVENTIONAL METHODS OF FLOW-GAUGING,

Leicester Univ. (England). Dept. of Engineering.
P. H. John, F. A. Johnson, and P. Sutcliffe.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 141-152, 2 fig, 2 tab, 22 ref.

Descriptors: *Gaging, *Flow measurement, *Automation, *Flowmeters, *Flow velocity, Hydrometry, Gages, Floats, Bubble gages, Streamflow, Running waters.

The recent development of the integrating float and salt-velocity flow-gaging methods is discussed. The results of tests relating to precalibration of plastic floats and of field trials using both the single and two-float techniques are presented. It is concluded that if solid floats are used, precalibration may be employed with confidence, integrating float gagings comparing favorably with those obtained by current meter. However, in view of some problems associated with the application of this technique in natural channels, the use of air bubbles is examined. This method has considerable potential but requires some further investigation. Two new automated forms of the salt-velocity technique are described and the results of laboratory tests presented. These show that although slightly less accurate than some other salt-velocity techniques, these automated methods have the advantage of being portable and giving velocity data quickly. RISING AIR FLOAT TECHNIQUE FOR THE MEASUREMENT OF STREAM DISCHARGE,

Lancaster Univ., Bailrigg (England). Dept. of Environmental Sciences.
D. M. Sargent.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 153-164, 3 fig, 1 tab, 4 ref.

Descriptors: *Streamflow, *Flow measurement, *Gaging, *Floats, *Bubbles, Discharge measurement, Discharge, Flow discharge, Flowmeters, Automation, Gages, Flow velocity.

A simple, practical method of stream flow measurement has been developed that is based on the integrating float technique using air bubbles as rising integrating floats. The field equipment consists of a flexible rubber air supply pipe fitted with nozzles. The photographic method of data capture for subsequent analysis using a micro-computer is described. Field use and a number of field applications ranging from rivers of 20 m to 100 m width, slow moving canals, and concrete channels are considered. Current work on the method includes the possibility of automation using a television camera. Some advantages and limitations of the technique are discussed. The present method offers a real alternative to the velocity area method, particularly as it produces measurements of instantaneous discharge, and it can be used in some situations in which gaging is not possible using traditional techniques. INSTALLATION AND OPERATION OF A BUBBLE GAUGE NETWORK IN THE MAHAKAM RIVER BASIN, EAST KALIMANTAN, INDONESIA,

German Agency for Technical Cooperation, Frankfurt am Main (Germany, F.R.).
T. N. Woods, and E. Wachjan.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 165-172, 3 fig, 4 ref.

Descriptors: *Bubble gages, *Water level recorders, *Gages, *River basins, *Automation, Hydrometry, Hydrologic data collections, Networks, Water resources development, Hydrometric equipment, Hydraulic equipment.

A network of automatic water level recording stations has been installed in the Mahakam River Basin to provide water resources data for planning of Transmigration (Resettlement) and Area Development Programs and to monitor the environmental problems of flooding, erosion and sedimentation associated with large scale clearing of primary forests. The topography and instability of the river sections led to the selection of bubble gage recorders and the use of piled timber supports for staff gages at 13 locations. The SEBA Bubbler Gage Omega with a modified chart recorder was selected. This instrument was housed in wood and mounted on stilts on the top of the bank. The instrument casing was secured to the inside wall of the house by means of a clamp. The orifice was generally placed at a minimum depth of 0.5 m below the estimated lowest water level. In the absence of any main supply, 5 volt DC batteries were used to power the instrument at each location. The feed pressure to the instrument is controlled by a reducing valve. The thirteen stations equipped with bubble gages were manned by field observers and visited monthly by hydrological technicians. The network was administered from a project office at Kotabangun in the mid-catchment area. (See also W86-04785) (Geiger - PTT)

DETERMINATION OF THE ACCURACY OF WATER LEVEL OBSERVATION,

Rijkswaterstaat, The Hague (Netherlands).
J. W. Made van der.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England, p 173-184, 12 fig, 1 ref.

Descriptors: *Water level recorders, *Water level, *Multiple regression analysis, *Error analysis, *Rivers, Water level equipment, Hydrometry, Mathematical studies, Gages, Gaging, Hydrometric equipment, Statistical analysis.

The accuracy of a water level observation, expressed by its standard deviation, is influenced not only by the recording instrument itself but also by the situation and the conditions at and around the station. Some external factors affecting the results are: levelling errors; differences in level between the open water and the stilling well; influences of observation time; instrumental inaccuracies; influences of the situation of the gaging station; errors due to observation and digitizing; processing errors; and unclear definitions of the concept of true water level. The standard deviation cannot be derived from local observations only, because of the real movements of the water stage. Methods of deriving the standard deviation (inaccuracy) from neighboring stations, using simple multiple regression, are described. It appears that the standard deviation of water level observations in rivers can amount to several centimeters. (See also W86-04785) (Geiger - PTT)

IMPROVEMENT OF ULTRASONIC FLOWMETER IN RIVERS IN JAPAN,

National Research Center for Disaster Prevention, Sakura (Japan).
T. Kinosita.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 187-202, 12 fig, 6 ref.

Descriptors: *Flowmeters, *Flow measurement, *Ultrasonics, *Japan, *Stage-discharge relations, *Discharge measurement, Hydrometry, Flow, Rivers, Tidal rivers, Networks, Hydrologic data collections, Hydrometric equipment.

Ultrasonic flowmeters have already been successfully implemented in rivers in Japan. There is good agreement between the traditional method using current meters and the ultrasonic method. Direct continuous measurement is often necessitated in areas of high water, on tidal rivers, and at outflow from a lake. Improvements have been made concerning cable crossings, interference caused by temperature extremes, interference caused by noise, and ultrasonic velocity changes. Hydraulic characteristics of river flow based on continuously measured discharge are discussed, and these characteristics are useful in providing guidelines for hydrometric network systems. MEASUREMENT OF OPEN CHANNEL FLOW BY THE ELECTROMAGNETIC GAUGE,

Department of the Environment, Reading (England). Water Data Unit.
R. W. Herschy, and J. D. Newman.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 215-227, 10 fig, 1 tab, 4 ref.

Descriptors: *Gages, *Flowmeters, *Flow measurement, *Electromagnetic waves, *Channel flow, Channels, Hydrometry, Gaging, Automation, Flow discharge, Discharge measurement, Flow, Performance evaluation, Sewers, Culverts, Hydraulic equipment.

Since 1975, significant improvements have been made to the electromagnetic gage for measuring flows in open channels. These improvements have been mainly in the instrumentation. The principle of operation of the gage and the main criteria for site selection for an electromagnetic gaging station are described. The site calibration of an electromagnetic gage requires the establishment of the relation of discharge as found by current meter, or other means, to the variables for electrode voltage, depth of flow, and coil current. The coil of the gage may be installed in covered U-section ducts, or pipes. The electromagnetic gage may be used in gaging flow in sewers and culverts. In this application a prefabricated pipe of glass reinforced plastic is lowered into a manhole or access shaft and coupled to the pipeline. Performance tests of the gage on rectangular channels show the method to be reliable with an uncertainty of the order of 2%. The instrumentation of the process is based on a microprocessor bus-bar system which gives a high degree of flexibility in providing output options. A software and hardware sub-routines so that where software extensions are needed additional modules may be plugged in. (See also W86-04785) (Geiger - PTT)

HYDROMETRIC DATA CAPTURE USING INTELLIGENT SOLID STATE LOGGING SYSTEMS,

Severn-Trent Water Authority, Birmingham (England).
S. T. Walker.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 229-237.

Descriptors: *Hydrometry, *Computers, *Gages, *Monitoring, *Hydrologic data collections, Gaging, Ultrasonics, Electromagnetic waves, Rain gages, Remote control, Data acquisition, Automation, Hydrometric equipment.

From small beginnings with relatively simple rainfall event recorders, the use of solid state logging technology has expanded steadily within the Severn-Trent Water Authority hydrometric service. Ultrasonic and electromagnetic river flow measuring systems now record on intelligent microprocessor driven devices, instead of on the traditional punched paper tape. Further variants with increased versatility have been developed and are undergoing field trials. These include devices with built-in facility to monitor continuously, but record data only when predetermined threshold values are exceeded, or indeed, to record only significant changes in the state of a variable. The concept of the 'electronic notepad' has been introduced successfully into current meter gaging and shows promise for use in other hydrometric fields. In all cases, great attention has been paid to the human engineering' of the devices, and satisfying success has been achieved in making them easily usable by staff previously experienced only with traditional hydrometric equipment. FLOW MEASUREMENT AT SEWAGE TREATMENT PLANTS,

Vizgazdalkodasi Tudomanyos Kutato Intezet, Budapest (Hungary).
I. Mayer.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 241-245, 3 fig.

Descriptors: *Flow measurement, *Flowmeters, *Wastewater facilities, *Canals, *Flow rates, Flow discharge, Flow, Process control, Hydrometry, Hydrometric equipment.

Flow rates in open canals are measured almost exclusively by devices registering the headwater

level of shooting flow created by a constriction. At sewage treatment plants the sensing devices situated along the measuring constriction are susceptible to clogging, corrosion and to becoming inoperative, owing to the chemical, bacterial, or radiation effects of the substances present in the water. These difficulties were overcome by a measuring tube continuously flushed with fresh water. This is a substantially perforated tube in which the flushing water flows toward the sewage. The surface of the flushing fresh water in the tube rises - as in communicating vessels - to the same height as the surface of the sewage to be measured. In this way a fresh-water measuring station is achieved in the sewage. A teflon-coated sensing device is installed at the measuring station. The transmitted are transformed by micro-processors and a calculator into digital and graphical printouts indicating the actual flow rate, and the total volume up to the time of measurement. MONITORING WATER QUANTITY AND WATER QUALITY IN AN URBAN BASIN,

F. H. M. Ven van de.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IASH, July 19-30, 1982, Exeter, England. p 247-256, 6 fig, 3 ref.

Descriptors: *Water quality, *Water supply, *Urban drainage, *Catchment areas, *Monitoring, Hydrometry, Flow measurement, Computers, Automation, Hydrologic data collections, Flowmeters, Sampling, Hydrometric equipment, Water quality control, Water quality management, Canals.

A new urban drainage basin has been equipped in Lelystad for monitoring of both water quality and water quantity. Measurements of flow and the water quality parameters are performed continuously at the outfall of the stormwater drain and at three points in the receiving water body - a canal. A sampler is also installed at the outfall. The monitoring equipment is connected to a computer-controlled data logging system by a common carrier interface. On-line data reduction is performed by the logger, while the sampler takes either grab samples or collected samples. The quantitative variables are measured simultaneously with two instruments for a higher degree of reliability and accuracy. The qualitative monitors are regularly recalibrated and are kept under a strict preventive maintenance schedule. (See also W86-04785) (Author's abstract)

HADDINGTON FLOOD WARNING SYSTEM,

Institute of Hydrology, Wallingford (England).
G. P. Brunsdon, and R. J. Sargent.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 257-272, 5 fig.

Descriptors: *Flood forecasting, *Models, *Rainfall-runoff relationships, *Automation, *Flow measurement, Flood hydrographs, Flood plain management, Hydrologic data collections, Monitoring, Hydrometry, Computers, Rain gages, Hydrologic models, Data acquisition.

The data acquisition system described in this paper is described for forecast floods in the Haddington region which is located 25 km east of Edinburgh in Scotland. The instrumentation is compact, simple to operate, exploits modern microprocessor technology and is fully automatic. Low cost, good reliability and minimal maintenance requirements were factors considered during design. The system collects river flow and rainfall data, computes the catchment's response using a rainfall/runoff model and automatically updates a remote monitor with flow predictions and maintenance alerts. It is thus particularly suited to flood warning schemes where 24-hr manning cannot be provided and is specifically designed to operate on steep catchments where upstream river correlation cannot give sufficient warning. SATELLITE DATA AS BASIS FOR THE ESTIMATION OF RAINFALL AND RUNOFF,

Bochum Univ. (Germany, F.R.).
L. R. Kruger, G. Strubing, and G. A. Schultz.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 273-284, 10 fig, 7 ref.

Descriptors: *Satellite technology, *Rainfall, *Runoff, *Remote sensing, *Infrared imagery, Hydrologic data collections, Hydrometry, Rainfall-runoff relations, Data acquisition, Hydrologic models, Clouds.

Remote sensing techniques are increasingly applied in order to acquire hydrological data. Particularly in developing countries (where often no hydrometric data are available) remote sensing techniques based on satellite imagery may be valuable for design or operation of water resources systems. Two techniques for the application of satellite imagery in hydrology are presented. The first shows a method for the estimation of rainfall volumes from infrared imagery of a geostationary satellite providing information of the time-dependent change of cloud surface temperature and cloud area. On the basis of these parameters a mathematical model is developed which computes rainfall volumes. This technique is not yet operational, but in principle it can be used for runoff estimation from images of a polar orbiting satellite using an indexing technique. This method allows the direct estimation of monthly runoff values from daily infrared images. The method could eventually be applied for the generation of hydrological design data. TOWARDS A SATELLITE-BASED HYDROMETRIC DATA COLLECTION SYSTEM,

Department of the Environment, Reading (England). Water Data Unit.
R. W. Herschy.
IN: Advances in Hydrometry, IAHS, July 19-30, 1982, Exeter, England. p 285-296, 3 fig, 1 tab, 4 ref.

Descriptors: *Satellite technology, *Hydrologic data collections, *Telemetry, *Hydrometry, *Meteorological data collection, Discharge measurement, Networks, Data acquisition, Remote sensing, Data transmission, Gaging, Cost analysis.

Water level and discharge data for the United Kingdom streams and rivers are at present punched on to paper tape. This system involves delay, and the equipment is due for replacement. The use of satellite telemetry is considered as an alternative. The types of Data Collecting Platforms (DCPs) available include self-timed units where the data are transmitted in buffered blocks of data at fixed intervals, DCPs which provide an immediate alert transmission when a critical data value has been reached, and interrogable DCPs where the unit receives a command message from the control center via the satellite. The United Kingdom has investigated the data collection systems offered by the geostationary satellites and the METEOSAT earth receiving station. The United Kingdom pilot study showed the DCP to be a reliable and cost effective method of transmitting hydrological data. Some on-site pre-processing before transmission could be performed simply and conveniently by the DCP microprocessor. Use of the satellite system in conjunction with the WEFAX dissemination program is considered. Exiting telemetry networks suffer from high installation and maintenance costs. The largest cost of a satellite system is the design, manufacture, launching and operation of the satellite. A satellite data collection system would appear to offer a cost effective replacement to the existing United Kingdom system of data collection. (See also W86-04785) (Geiger-PTT)

DEVELOPMENTS IN HYDROMETRY IN CENTRAL AMERICA AND BRAZIL,

Projecto de Hidrologia e Climatologia da Amazonia, Belem (Brazil).
M. B. Dengo.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 335-344, 2 fig, 4 ref.

Descriptors: *Hydrometry, *Developing countries, *Hydrologic data collections, *River basins, *Telemetry, Data acquisition, Meteorological data collection, Discharge measurement, Flow discharge, Flow measurement, Flood forecasting, Networks, Hydrologic models, Tocatins River, Amazon River, Brazil, Costa Rica, Panama.

A general review of the developments in hydrometry in Central America in the 1970-1980 decade is given. Under the UNDP/WMO Central American Hydrometeorological Project, the number of meteorological and hydrological networks were increased in improved flow and flood-forecasting systems. Honduras has begun forecasting activities with a new telemetric network in the basin used for the El Cajon Hydroelectric Project. Panama and Costa Rica are also preparing telemetry stations in their networks. The Brazilian Project on Hydrology and Climatology of Amazonia (PHCA) has centered its activities along three main lines: the square-grid study to determine the minimum size of network capable of producing data of acceptable quality, and to create a physiographic-hydrometeorlogical data bank; the design, installation and oepration of a pilot telemetry network in the River Tocantins basin; and the mathematical modelling of the middle and lower Amazon River. Two techniques used by PHCA for stage-discharge relationship evaluation are discussed. For the calculation of discharge in backwater reaches, the backwater isolines method is used. A dynamic model has been implemented to represent the stage-discharge relationship in hysteresis loops. Both of these methodologies are computer-oriented and permit the automatic calculation of discharge. (See also W86-04785) (Geiger - PTT)

ADVANCED HYDROLOGIC INSTRUMENTATION ACTIVITIES WITHIN THE WATER RESOURCES DIVISION OF THE US GEOLOGICAL SURVEY,

Geological Survey, Reston, VA. Water Resources Div.
R. W. Paulson, R. H. Billings, and A. S. Cherdak.
IN: Advances in Hydrometry, IAHS Publication No.134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 353-359, 3 fig, 2 ref.

Descriptors: *Networks, *Hydrologic data collections, *Hydrometry, *Research priorities, *Gaging, *Monitoring, Sampling, Data acquisition, Data collection, Automation, Future planning, Data transmission, Data processing, Design criteria, Network design, Water sampling.

Primary responsibility for the USA's water data lies with the Water Resources Division of the U.S. Geological Survey. The Survey has identified a need for upgrading its water data-collection system in the field. A three-phase program is under way to define needs for field instrumentation and techniques, applicable technologies, and specific research and development plans. Two of the Survey's instrumentation projects are described, which fit into this program of upgrading technology. The first is a study of the time base of data sampling at fixed gaging stations. The second is the planning and development of a new field data acquisition system to replace the 12,000 to 15,000 mechanical punched-tape recorders now used in

the Survey network. (See also W86-04785) (Author's abstract)

SEDIMENT TRANSPORT SAMPLING FOR ENVIRONMENTAL DATA COLLECTION,

Water and Power Resources Service, Denver, CO.
E. L. Pemberton.
IN: Erosion and Sediment Transport Measurement: Symposium, IAHS Publication No. 133, 1981. Proceedings of the Florence Symposium, June 22-26, 1981. p 159-167, 3 fig, 2 tab, 10 ref.

Descriptors: *Sediment transport, *Sampling, *Environmental effects, *Rivers, Suspended sediments, San Juan River, New Mexico, Trinity River, California, Smith's Fork River, Utah, Niobrara River, Nebraska, Einstein sampling procedure, River beds.

Case histories of sediment sampling for environmental concerns are described. Sampling programs varied, primarily because of the bed material composition. The collected sediment data consist of suspended sediment samples and channel hydraulic parameters for use in computing total sediment transport by the modified Einstein procedure. The rivers were as follows: San Juan River, New Mexico; Trinity River, California, Smith's Fork River, Utah; and Niobrara River, Nebraska. All were shallow, less than 1 meter. Sediment sampling was done with the rod sampler or handline using the equal width interval method. For the rivers with bimodal bed material (Gravel-cobble in both the quiescent reaches and the riffles or rapids and sand-size sediments intermixed with the larger material) both types of bed material were sampled. The coarser material was sampled with a square grid photograph, shovel sample for sieve analysis, or visually. Another problem with the bimodal beds was the number of samples required for good representation; sand requiring more samples. (See also W86-04843) (Cassar - PTT)

SEDIMENT SAMPLING IN RIVERS AND CANALS,

Uttar Pradesh Irrigation Research Inst. Roorkee (India).
H. S. S. Singhal, G. C. Joshi, and R. S. Verma.
IN: Erosion and Sediment Transport Measurement: Symposium, IAHS Publication No. 133, 1981. Proceedings of the Florence Symposium, June 22-26, 1981. p 169-175, 3 fig, 6 ref.

Descriptors: *Sediment transport, *Sampling, *Bed load, *Suspended sediments, *Rivers, *Canals, India, Floods.

Sampling techniques for bed and suspended load observations in rivers and canals at both low and high velocity flows were studied at Roorkee, India. Bed load measurements were done with a pressure difference bed load sampler. This instrument had very high efficiency. In rivers suspended and bed load sampling was done at five verticals. However, in canals three vertical samples were done. Suspended load measurements were done with a modified depth integrating sampler. The mean value of suspended sediment load was found from single samples at 0.5 of the river depth and 0.54 of the canal depth. Sediment loads in flood stage could not be determined using conventional equipment and methods. The following techniques were used during these periods. Surface samples were collected from bridges, assuming that the turbulence around the piers would produce a homogeneous sample. A relationship was developed between average suspended sediment concentration and surface suspended sediment concentration, which was applicable to surface samples collected during floods. A relationship was determined between total (suspended and bed) load and average suspended load during stable conditions for calculation of total load at high flows. STUDY OF THE VARIABILITY OF SUSPENDED SEDIMENT MEASUREMENTS,

Agricultural Research Service, Chickasha, OK.
P. B. Allen, and D. V. Petersen.
IN: Erosion and Sediment Transport Measurement: Symposium, IAHS Publication No. 133, 1981. Proceedings of the Florence Symposium, June 22-26, 1981. p 203-211, 3 fig, 4 tab, 6 ref.

Descriptors: *Sediment transport, *Suspended sediments, *Rivers, *Sampling, Washita basin, Oklahoma, Sediment load.

A study was made of the variability of suspended sediment concentration data collected using paired equal-transit-rate samples, paired vertical and equal-transit-rate samples, and paired automatic type and equal-transit-rate samples. Data were selected from two gaging locations in the U.S. southern plains. Equal-transit-rate sample concentrations collected by experienced operators. Agreement was less at the more difficult-to-sample location that had a large channel, a truss bridge, and a large sand load. The long-term sediment load for this location was computed with the higher of each of the paired concentrations obtained by less experienced operators. This load was 30% higher than the truer load derived with the lower concentrations. Data obtained with the single-vertical sampling method and automatic pumping-type samplers can be used to determine the entire suspended sediment load, if long-term sediment yield errors up to about 10% can be tolerated. MEASUREMENT OF DEBRIS FLOW AND SEDIMENT-LADEN FLOW USING A CONVEYOR-BELT FLUME IN A LABORATORY,

Kyushu Univ., Fukuoka (Japan). Dept. of Civil Engineering.
M. Hirano, and M. Iwamoto.
IN: Erosion and Sediment Transport Measurement: Symposium, IAHS Publication No. 133, 1981. Proceedings of the Florence Symposium, June 22-26, 1981. p 225-230, 12 fig, 2 ref.

Descriptors: *Sediment transport, *Flow measurement, *Suspended sediment, Flumes, Flow Rate.

Though a bore is a nonsteady flow, it can be treated as a steady flow in a coordinate system which moves at the same speed as the bore. To make a steady bore in the laboratory, a conveyor-belt type of flume with a movable bed was constructed. By setting the belt speed to that of the bore front, a statistic debris bore was obtained. In addition, flow of a zero mean velocity was obtained by setting the belt speed to that of the mean flow velocity for a selected slope. In this way detailed observations of grain behavior over long periods were possible with improved measurement accuracy. Experiments on debris flow and sediment-laden flow were undertaken incorporating measurements of grain concentration, velocity distribution and grain trajectories. W. E. H. Culling.
IN: Erosion and Sediment Transport Measurement: Symposium, IAHS Publication No. 133, 1981. Proceedings of the Florence Symposium, June 22-26, 1981. p 267-274, 1 fig, 17 ref.

Descriptors: *Sediment transport, *Soil mechanics, *Soil creep, *Slopes, Particulate matter, Mathematical studies.

Two methods for measuring soil creep on hillsides are proposed. The first relies on a steady-state solution to the diffusion equation for the region bounded internally by a circular cylinder. This method has some theoretical and practical difficulties, but it offers the advantage of a single, completely destructive observation that can be carried out in the laboratory. The second estimates the velocity of particles by counting. (See also W86-04843) (Cassar - PTT)

N. W. Hudson.
IN: Erosion and Sediment Transport Measurement: Symposium, IAHS Publication No. 133, 1981. Proceedings of the Florence Symposium, June 22-26, 1981. p 383-390, 1 fig, 31 ref.

Descriptors: *Erosion, *Measuring instruments, *Rainfall impact, Splash erosion, Soil erosion.

There is a need for both a worldwide study of the erosivity of rainfall, and also for detailed localized studies. Previous studies, which are reviewed, have used different techniques, and this complicates the comparison of results. The alternatives are (a) direct measurements of erosion, which are only effective for splash erosion; (b) computations from measurements of raindrop size, which is established but laborious technique even with modern scanners and signal analyzers; (c) direct measurement of rainfall properties such as impact stress, momentum, or energy. It is suggested that this last method is most appropriate because of developments in pressure transducers and microprocessors. The proposed route to standardization is first a comparative study of pressure transducers and acoustic or piezoelectric sensors, followed by development of an instrument suitable for cheap mass production, which could then be adopted and used by an international network. Descriptors: *Erosion, *Measuring instruments, *Rainfall simulators, Simulated rainfall, Infiltration, Sediment concentration, Runoff, Soil surfaces, Microrelief profilimeter.

A trailer-mounted rainfall simulator for infiltration and erosion research has been built and tested. Rainfall is applied continuously through a series of drop forming needles. The simulator allows for a wide range of intensities, from near zero to approximately 200 mm/hour. In conjunction with the simulator, an automatic microrelief profilimeter is used to measure soil surface characteristics. This instrument automatically scans points on a 1 cm by 5 cm grid spacing to measure soil surface elevations with a vertical resolution of 1 mm over a 25 cm range. Also, associated with the laboratory is a density measuring apparatus which continuously records sediment concentrations in runoff water. (See also W86-04843) (Author's abstract)

PORTABLE RILL METER FOR FIELD MEASUREMENT OF SOIL LOSS,

Agricultural Research Service, Pullman, WA.
D. K. McCool, M. G. Dossett, and S. J. Yecha.
IN: Erosion and Sediment Transport Measurement: Symposium, IAHS Publication No. 133, 1981. Proceedings of the Florence Symposium, June 22-26, 1981. p 479-484, 1 fig, 1 tab, 3 ref.

Descriptors: *Erosion, *Measuring instruments, *Soil loss, Soil erosion, Rill erosion, Rill meters, Runoff, Runoff plot.

A portable rill meter for measuring soil erosion is described. It has a working width of 1.829 m, uses long stainless steel pins, and has a maximum depth range of 410 mm. A 35 mm single lens reflex camera with a 28 mm wide-angle lens is used to record data. A grid background serves as reference or as a means for digitization. These instruments can be used after events in relatively inaccessible locations such as high elevation surface mine spoil banks and revegetated sites in remote areas. They can measure erosion on rangeland trails carrying heavy off road recreational vehicle traffic, on cropland to supplement runoff plot data, and on runoff collection plots to quantify rill and inter-rill erosion. The lightweight second version of the meter weighs 25 kg without the camera. (See also W86-04843) (Cassar-PTT)

FIELD MEASUREMENTS OF RATES OF BANK EROSION AND BANK MATERIAL STRENGTH,

Akademiya Nauk SSSR, Moscow. Soviet Geophysical Committee.
C. R. Thorne.
IN: Erosion and Sediment Transport Measurement: Symposium, IAHS Publication No. 133, 1981. Proceedings of the Florence Symposium, June 22-26, 1981. p 503-512, 2 fig, 17 ref.

Descriptors: *Erosion, *Soil mechanics, *Field measurements, Stream banks, River banks, Soil properties, Shear strength, Tensile strength, Remote sensing, Sonar, Flumes, Aerial photography, Photograph, Maps.

Methods of monitoring rates and locations of bank erosion are reviewed. On-site measurements require a detailed map of the channel and bank lines. This can be done by plane tabling or the compass and tape technique. Spatial and temporal variations are obtained using erosion pins. On large rivers side-scan sonar can locate bank failures underwater. Remote sensing techniques involve aerial photography and historical maps. Measurements of bank material strength involve erodibility (studied in flumes), shear strength (measured with the bore-hole shear tester), and tensile strength (measured by the modified compression tester). MONITORING WELL SCREEN INFLUENCES ON DIRECT FLOWMETER MEASUREMENTS,

K-V Associates, Inc., Falmouth, MA.
W. B. Kerfoot, and V. A. Massard.
Ground Water Monitoring Review, Vol. 5, No. 4, p 74-77, Fall 1985. 4 fig, 3 tab, 3 ref.

Descriptors: *Instrumentation, *Flowmeters, *Flow measurement, *Well screens, *Monitoring, *Groundwater movement, *Test wells, Directional determinations, Flow resistance.

A simple procedure is described to test an unknown well screen to determine its influence on measurement of direction and rate of groundwater flow. The investigations concern well screens constructed of smooth-interior, slotted or wrapped polyvinylchloride monitoring wells compatible with ground water flowmeters employing gravity bead packers where glass beads are used in a netbag to maintain porous flow conditions between the screened area and are used to transmit the heat pulse. A variety of commercial smooth-interior slotted and wrapped well screens were found satisfactory for sensitive measurements. Increasing the frequency of slots and the number of slot rows allows accuracies of directional determination of + or - 4 degrees. Using external packing material to keep silt out and maintaining a 0.02-inch slot width allows more than a six-fold increase in sensitivity to flow by lessening resistance to flow. The simple procedure employed for testing resistance to flow and accuracy of direction can be used on any unknown well screen to verify its suitability for measurements. (Rochester-PTT)

DISTRICT METERING,

Sunderland and South Shields Water Co. (England).
R. A. Pepper.
Journal of the Institute of Water Engineers and Scientists, Vol. 39, No. 6, p 485-493, December 1985. 1 fig, 3 tab, 5 ref.

Descriptors: *Water metering, *Telemetry, *Networks, *Data collections, Water use, Water districts, Computers, Monitoring, Water distribution, Leakage.

The Mid Kent Water Company of England started a telemetry system in 1968 which has evolved into a regular weekly, computer-assisted procedure for water accounting in some 240 districts covering much of the area of supply. The network also uses manually read meters with the potential to improve the metering level in the future. The metering system identifies districts with abnormal demands, assists in planning, optimizing and extending the distribution system and is a valuable aid in leak detection. The company maintains a strong uniformed prevention of waste department that handles both waste prevention and bylaw enforcement. Weaknesses in the current computational procedures are being examined along with domestic consumption levels, new metering equipment and a replacement computer-based telemetry system. (Geiger-PTT)

EFFECTIVENESS OF SAMPLING STRATEGIES FOR INTERTIDAL MONITORING,

Victoria Univ. of Manchester (England). Dept. of Zoology.
S. J. Hawkins, R. G. Hartnoll, G. A. Williams, P. J. Azzopardi, and M. T. Burrows.
Water Science and Technology WSTED4, Vol. 18, Nos. 4/5, p 63-72, 1986. 5 fig, 2 tab, 21 ref.

Descriptors: *Water sampling, *Intertidal areas, *Monitoring, Water quality control, Evaluation, Estuaries, Wales, Isle of Man, Statistical analysis.

Multiple random quadrats (25 cm by 25 cm) were sampled at five sites on depositing shores in South Wales and the Isle of Man. The effect of the increased number of samples was examined in relation to the reliability of estimation of various ecological measures (number of species, total individuals, total individuals of selected species). The replication required varies with the measure involved, but generally 10-20, or even more quadrats, are needed for reliable information which can be used to detect other than very gross changes with time. In monitoring programs, it is therefore advantageous to concentrate sampling efforts on a limited number of sites with high replication, because of this considerable spatial variation. The need to define specific aims, and to design a sampling format related to these aims, is emphasized. (Lantz-PTT)

7C. Evaluation, Processing and Publication

AUTOMATION OF DAILY WATER DISCHARGE COMPUTATION FOR RIVERS WITH DIFFERENT REGIMES,

Sredneaziatskii Nauchno-Issledovatel'skii Gidrometeorologicheskii Inst., Tashkent (USSR).
Y. N. Ivanov.
IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 345-352, 19 ref.

Descriptors: *Discharge measurement, *Automation, *Rivers, *Computers, *Runoff, Flow discharge, Mathematical studies, Algorithms, Hydrologic data collections, Flood forecasting, Ice jams, Mathematical models, Data processing, USSR.

A system for processing hydrological data is proposed which allows one to automate the process of getting computerized daily water discharges, daily water stages, tables of measured water discharges and icing conditions of a water body. The system of processing consists of an automated input of initial information and its processing, the evaluation of quantity and accuracy of water discharge, and computation of parameters of water discharge curves. The selection of a method for computation of daily water discharges is made automatically by means of criteria elaborated by the author. Computation of discharge for the periods of out-of-bank flow, and during freeze-up, is realized by the methods accepted in the USSR; and for periods of river bed deformations by the method of time curves and Bolster, but with the author's corrections. Results are available in the form of tables of daily data with accuracy estimates of all the computations. The system is now under trial. (See also W86-04785) (Author's abstract)

RELIABILITY OF SUSPENDED SEDIMENT LOAD DATA,

Exeter Univ. (England). Dept. of Geography.
D. E. Walling, and B. W. Webb.
IN: Erosion and Sediment Transport Measurement: Symposium, IAHS Publication No. 133, 1981. Proceedings of the Florence Symposium, June 22-26, 1981. p 177-194, 6 fig, 9 tab, 23 ref.

Descriptors: *Sediment transport, *Suspended sediment, *Sampling, Creedy River, United Kingdom, Sediment load, Mathematical studies.

Numerical indirect methods for estimating long-term suspended loads were applied to data from the River Creedy, United Kingdom, for which 7 years of continuous records were available. Serious over- and underestimation of loads was evident. Ratios of estimated/measured load for eight year-long periods and five interpolation procedures ranged from 0.17 to 3.13. W86-04861

ACCURACY AND PRECISION OF SUSPENDED SEDIMENT LOADS,

Guelph Univ. (Ontario). School of Engineering.
W. T. Dickinson.
IN: Erosion and Sediment Tranport Measurement: Symposium, IAHS Publication No. 133, 1981. Proceedings of the Florence Symposium, June 22-26, 1981. p 195-202, 3 fig, 15 ref.

Descriptors: *Sediment transport, *Sampling, *Suspended sediment, *Rivers, Sediment load, Mathematical studies.

The effects of five computational methodologies and four sampling frequencies on the accuracy and precision of annual suspended sediment load estimates has been explored. The mean ratio of the estimated annual suspended load to the population suspended sediment load has been determined for each method and frequency as an index of accuracy. The standard deviation of the ratio has been

determined as an index of precision. Some computational methods have been found to be both precise and accurate over a range of sampling frequencies. One method appears to be reasonably precise but very inaccurate: another reasonably accurate but not precise. The results are seen to be extremely important for the selection of both sampling schemes and computational techniques for suspended sediment studies and for the evaluation of existing data sets. W86-04862

NATIONAL EROSION INVENTORY OF THE SOIL CONSERVATION SERVICE, US DEPARTMENT OF AGRICULTURE, 1977-1979,
Soil Conservation Service, Washington, DC.
J. N. Holeman.
IN: Erosion and Sediment Transport Measurement: Symposium, IAHS Publication No. 133, 1981. Proceedings of the Florence Symposium, June 22-26, 1981. p 315-319, 1 tab.

Descriptors: *Erosion, *Soil loss, Cropland, Range, Forests, Bank erosion, Pastures, Construction, Roads, Stream banks, Gully erosion, Erosion rates.

The Soil Conservation Service has completed the second phase of a national erosion inventory. Phase I covers erosion rates on cropland, range, forest, and pasture. Phase II covers erosion rates on stream banks, gullies, roads, and construction areas. Data collection was completed on October 1979 from 72,500 randomly selected sites on nonfederal land in all states except Alaska and including Puerto Rico. Total national erosion on nonfederal land is estimated at about 4.8 trillion mg annually, itemized as follows: cropland, 37.6%; range, 26.5% forest, 8.3%; pasture, 6.6%; stream bank, 10.6%; gullies, 5.7%; roads, 3.2%; and construction, 1.5%. Expressed at 1000 mg per year, the erosion losses for 610 million ha of nonfederal land are cropland, 1,786,676; pasture, 314,192; range, 1,263,218; forest, 396,875; stream banks, 501,763; gullies, 270,619; roads, 153,003; and construction, 72,529. Erosion data are also presented for streams, gullies, roads, and construction for each state. (See also W86-004843) (Cassar - PTT)

DATABASE MANAGEMENT,
Data Stream Systems, Greenville, SC.
L. G. Blackwell, and V. W. Langworthy.
Water Engineering and Management, Vol. 133, No. 3, p 23, March 1986.

Descriptors: *Database management, *Software, *Data collections, Management planning, Utilities.

Database management software for water and wastewater utilities is discussed in terms of selecting the software, software capabilities, using the data, and limitations of the software. Selection of database management software should be based on a careful assessment of each utility's needs. Important applications of data stored in the computer database files are generation of table (row and column) reports and a label format, which can be used for printing labels, addressing envelopes, and personalizing computer-generated correspondence. The user should distinguish between simple database software and more complex database management information systems. Finally, the prospective purchaser of computer hardware must know that the equipment to be purchased is compatible with the software to be used. (Rochester-PTT)

8. ENGINEERING WORKS

8A. Structures

HEAVY RAINS HASTEN BRIDGE REPLACEMENT,
H. M. Barr.
Public Works, Vol. 117, No. 5, p 56-57, May 1986.

Descriptors: *Bridge construction, *Bridge design, Precipitation, Soil properties, Flood plains, Linings, Concrete, Texas, Longview.

On March 20, 1985, a particularly heavy rain caused the supporting timbers under the King Street Bridge, Longview, TX to begin to fracture, forcing city officials to close the crossing to traffic. Within Longview is the 1,900 acre drainage basin of Wade Creek, which along its 3.6 mile course is crossed at mile 1.7 by the King Street Bridge. The major design considerations were the 100 year discharge of Wade Creek at King Street, the elevations of intersecting streets and driveways, and the soil condition. The 100 year discharge of the basin was 2,850 cfs and the flood plain elevation was approximately 2 ft above the old wooden structure. The creek was concrete lined for 30 ft on each side of the bridge. Wicks extending from the top of the ditch wall lead to weep holes near the bottom. The new bridge opened to traffic three and a half months after closure of its predecessor. The combination of precast concrete boxes, filter fabric, crushed rock base, and drainage wicks were used to provide the city an efficient design, timely construction, and a project with potential for a long life. IMPLEMENTING THE TALIHA MINI HYDRO SCHEME IN ZAIRE,
M. Gebendinger.
Water Power and Dam Construction, Vol. 38, No. 2, p 35-36, April 1986.

Descriptors: *Zaire, *Kyondo, *Taliha mini hydro, *Construction, Hydroelectric plants, Developing countries.

Planning and construction of a small hydroelectric plant at Kyondo, Zaire, were carried out by volunteer engineers and missionaries in cooperation with local villagers. Simplicity of operation, with many hand-operated features, characterized the design. Much of the construction of roadways, headrace, and powerhouse materials was done by local labor with a minimum of modern construction equipment. To date, the peak load has never exceeded 60 kW, equal to no more than 20% of the maximum rated load, but the plant has run practically 100% of the time over the last four years. The only shutdown occurred when the headrace was nearly filled with storm debris, and the locally trained operators managed the problem. (Rochester-PTT)

SALVAGING A WATER RESERVOIR,
Overman (W.C.) Associates, Virginia Beach, VA.
R. L. W. Kelly, W. M. Boone, and J. R. Spacek.
Public Works, Vol. 117, No. 4, p 50-51, April 1986.

Descriptors: *Storage reservoirs, *Rehabilitation, *Reservoir construction, Post-tensioned concrete, *Thoroseal, *Cost analysis, *Portsmouth, *Virginia, Leakage, Structural deterioration, Concrete spalls.

Portsmouth, Virginia's Godwin southern reservoir, a 2 million gallon facility built in 1920, but was suffering loss of capacity due to leakage and had severe structural deterioration. Rehabilitation was chosen as a much less expensive alternative to construction of a new reservoir. Under the plan, the concrete walls and floor slab would be salvaged, and the expansion joints repaired, but top slabs would be replaced. Replacement of the top slab was accomplished using a post-tensioned slab system at a cost of 305,334 dollars, and numerous spalls in the concrete walls were repaired. All concrete surfaces were treated with Thoroseal, and the earth berm around the reservoir was reseeded. Construction of a new reservoir had been estimated to cost more than 900,000 dollars. BIG BUCKS SAVED ON SEWER REHABILITATION PROJECT,
D. R. Lovejoy, and K. J. Munz.
Public Works, Vol. 117, No. 4, p 53-54, April 1986.

Descriptors: *Sewers, *Maintenance, Bogs, Long Island, New York, Pipes, Maintenance costs, Acidic soils.

The sewer system of Freeport, Long Island, New York, was built in 1927 and included concrete pipes and asbestos cement, all of which have become leaky from the effects of acidic subterranean bogs through which they passed. Various rehabilitation alternatives were considered to correct the serious infiltration problems within the system. The Insituform process was chosen, in which a polyester felt sleeve saturated with thermosetting resins is inserted inside out into the sewer, and unrolled by the pressure from a column of water. Heat is then applied to set the resin. Two contracts for different aspects of this work totaled 6 million dollars, making it the largest Insituform installation in the United States. One half of the construction project was the lining procedure and the remainder was repair and replacement of pipes that were too badly deteriorating for lining. (Rochester-PTT)

DURABLE CHEMICAL GROUT SOLVES 'CASE OF THE DISAPPEARING LAKE',
R. H. Allred, and B. W. Kostyk.
Public Works, Vol. 117, No. 4, p 68-69, April 1986.

Descriptors: *Sewer infiltration, *Acrylamide grout, *Scout-seal grout, *Sinkholes, *Auburndale, *Florida, Maintenance, Roads, Water table.

Severe infiltration problems existed in Auburndale, Florida, for many years because much of the sewage piping was laid below the water table. In one part of town the area lift station operated continuously and wet season flows exceeded 1.0 million gal/day, even though the theoretical flow based on the local population was only 0.25 million

gal/day. Attempts to seal the piping with acrylamide chemical grout failed twice. Ultimately Scotch-Seal 5600 (Foam grout, formerly known as 3M Brand CR 202 Grouting Compound) was tested and installed. Scotch-Seal 5610 Gel has been used more recently in other parts of the network. This grouting system is working well, preventing infiltration, the development of sinkholes in roads, and the drainage of Little Lake Dickey into the sewage network. (Rochester-PTT)

GLEN CANYON DAM'S QUICK FIX,

Water and Power Resources Service, Denver, CO.
M. S. Eckley, and D. L. Hinchliff.
Civil Engineering (ASCE), Vol. 56, No. 1, p 46-48, January 1986.

Descriptors: *Colorado River, *Arizona, *Glen Canyon Dam, *Maintenance, Spillway, Open channel, Concrete arch, Dams, Tunnels, Seepage control.

When the spring runoff rampaged down the Colorado River in 1983, Glen Canyon Dam was one of its victims. The Bureau of Reclamation had only 10 months to make repairs in time for the following spring's flows. The Guy F. Atkinson Construction Company was hired on a cost reimbursable basis. Both the designer and contractor began work immediately. Neither limited access to the remote Northeastern Arizona site, water seepage, nor a confined work area kept them from meeting their deadline. Close monitoring of work progress and efficient use of resources helped. Located on the Colorado River, 15 miles upstream of Lee's Ferry, Arizona, the 710 foot high concrete arch dam has an open-channel flow-type spillway in each abutment. Each spillway consists of a 41 foot diameter concrete lined section inclined at 55 degrees, a vertical bend, some 1000 feet of near horizontal tunnel and a flip bucket at the downstream tunnel portal. Construction was speeded up by the use of multiples of specialized equipment, and by the building of a concrete plant on-site. Two 20 ft. diameter tunnels were driven through the sandstone canyon walls to repair horizontal portions of the tunnel spillway. This work was accomplished in 3 wk using a roadheader continuous mining machine. Water seepage in the tunnels was controlled by a dewatering platform at the spillway intake, French drains and ditches, and water barriers and plastic sheeting. (Peters-PTT)
W86-04957

LIFT STATION DESIGN,

GRW Engineers, Lexington, KY.
B. Montgomery.
Civil Engineering (ASCE), Vol. 56, No. 1, p 66, January 1986.

Descriptors: *Sanitary wastewater, *Computer programs, *Storm wastewater, *Wastewater treatment, Pumping, Least squares method.

A computer program was written to run on an IBM PCXT or AT and other IBM-compatible machines to aid in the design of duplex sanitary or storm sewage lift stations. The program assumes a duplex station, with the second pump used solely for backup. There are no provisions for multiple pump operation. The system head curve is calculated using the least squares method of curve-fitting through three points. The calculation of a pump curve requires the user to select one or more pump curves from a manufacturer's catalog that will produce the desired operating conditions. The system head curve and the pump curve are intersected to produce a preliminary operating point for the selected pump. Input for wet well design includes type of wet well, wet well dimensions, the invert elevation of the lowest line entering the wet well, and the minimum wastewater depth in the wet well. The program assigns a new low level wastewater surface elevation in the wet well, and then recalculates the system head curve and final operating point. The program can then create a printout that provides backup documentation for a design file, or is suitable for inclusion in reports. (Peters-PTT)
W86-04959

CONTROL OF SPILLWAY GATES DURING FLOODS,

Lewin Fryer and Partners, Richmond (England).
J. Lewin.
Water Services, Vol. 90, No. 1081, p 93-95, 98, March 1986. / fig.

Descriptors: *Spillway gates, *Floods, *Dams, Safety, Computer control, Automatic gates, Transmission lines, Gates, Reservoirs, Automation.

Methods of controlling spillway gates during floods are reviewed. The objectives of spillway gate operation include the safety of the dam (ensured by preventing the reservoir level from rising to within a few meters of the crest, maximum storage, flood routing, and bank stability. The operating rules and systems are presented for both manual methods, (local control of motorized operation, remote control of motorized operation, and computer assisted control) and automatic methods. Cascade control is generally used in conjunction with power actuation of gates, either by electric motor driven winches or by oil hydraulic cylinders. Level control by electro-mechanical control is actuated by a predetermined rise in the reservoir level above the retention level, which initiates opening of the gates in steps and in sequence. Level control by computer (feedback) control system) moves the gate to a set point after determining the desired outflow with reference to the measured inflow. The water-level-operated automatic gates are either sector gates, drum gates, or radial automatic gates. A survey of existing practice shows wide variation between operators. In nearly all cases, at least one stage of redundancy is introduced for critical equipment and in many cases, two stages are provided. Transmission links are usually duplicated. In exceptional circumstances, dedicated buried transmission lines are used. The trend toward automatic control of spillway gates is likely to continue because it eliminates 24 hr manning and reduces the requirements for trained personnel. Regular, thorough maintenance and testing is essential to maintain reliability. (Peters-PTT)

LARGE CONCRETE DAM CONSTRUCTION IN THE USSR,

Vsesoyuznyi Gidroproektno-Izyskatel'skii i Nauchno-Issledovatel'skii Inst. 'Gidroproekt', Moscow (USSR).
L. P. Mikhailov.
Water Power and Dam Construction, Vol. 38, No. 3, p 24-28, March 1986. 5 fig, 1 tab.

Descriptors: *Dam construction, *USSR, *Concrete, Arch dams, Concrete buttress dams, Concrete, Gravity dams, Model studies, Cranes, Geology, Seismology.

Characteristics of the major concrete dams in the USSR are summarized, and problems associated with their design and construction are discussed. Most of the large, high-head concrete dams in the USSR are concrete gravity dams, with some arch dams and concrete buttress dams. A uniform system of state standards and norms is employed for construction of dams in the USSR. In addition to stress and strain calculations, seismic analyses are conducted. Geomechanical models are frequently employed. Experience in the construction of dams in severe climate conditions in the USSR has resulted in progress on techniques to ensure reliability and efficiency in such areas as concrete placement, use of cranes in construction, and placement of concrete dams on rock foundations. Areas still needing investigation are application of concrete with low cement content, development of a continuous construction procedure, eliminating pipe cooling of concrete, and decreasing the amount of cement and reinforcing steel used in dams. Descriptors: *Tidal powerplants, *Caissons, *USSR, *Bulb turbines, *Double-action generation, *Ecological impact, Hydraulic engineering, Feasibility studies, Tide cycles, Tide range, Peaking capacity.

Tidal power experience in the USSR and possible employment of tidal power to supply peak load in Western Europe are discussed. Experience with the 400 kW Kislaya Guba tidal powerplant is reviewed, and the characteristics of three proposed tidal power schemes are discussed as follows: Mezensk, with a tidal range of 9 m, a powerhouse with 800 x 19 MW bulb units built into a 92.9 km-long dam and including floating caissons housing generating sets with 10-m-diameter runners; Turgursk, where a total of 10 GW could be generated along with 35 km-long dam for a total annual output of 27 TWh and also using caissons for holding generating sets; and Pezhinsk, where two possible sites exist for a tidal powerplant of 87 GW capacity that could generate 200 TWh annually. The following main criteria were used in the feasibility studies of the three projects: double action (ebb and flow) arrangement and Rance type bulb turbine with the runner diameter increased to 10 m to comply with the design of the Leningrad Metal Works. The ebb and flow arrangement ensures a 25% increase in power output, and reduces the ecological impact of the project by almost completely retaining the original tide cycles and range. UNDERGROUND WORKS AT KENYA'S KIAMBERE PROJECT,

Watermeyer, Legge, Piesold and Uhlmann, London (England).
R. D. Gill, and D. S. Lawrenson.
Water Power and Dam Construction, Vol. 38, No. 5, p 13-16, May 1986. 6 fig, 2 tab.

Descriptors: *Kenya, *Powerhouse, *Tunnels, *Pressure shafts, *Surge chambers, *Underground powerplants, *Tunnel construction, Hydroelectric plants, Powerplants.

Three different approaches to underground work in rock of excellent quality with negligible water

infiltration are compared as found in the three separate civil works contracts for the 140 MW Kiambere project, Kenya. The three projects were for underground powerhouse and associated tunnels, pressure shafts, tailrace tunnels, and surge chambers; intake and headrace tunnel; and dams, spillway, and river diversion tunnels. Geology, site investigations, design of the power system, design of the diversion tunnels, construction of tunnels, construction of shafts, and powerhouse cavern are discussed. Tunneling and shaft sinking data are provided, including excavation procedures, support system, and concrete, for each of the three portions of the excavation works. (Rochester-PTT)

OPTIMUM CAPACITY AND TUNNEL DIAMETER OF RUN-OF-RIVER PLANTS,

Morrison-Knudsen Engineers, Inc., San Francisco, CA.
F. Fahlbusch.
Water Power and Dam Construction, Vol. 38, No. 5, p 17-20, May 1986. 5 fig, 2 ref.

Descriptors: *Hydroelectric plants, *Tunnel design, *Hydraulic design, Mathematical models, Optimization, Powerplants.

A solution is described of the problem of optimization of the capacity of run-of-river hydro plants with tunnels. The solution is a special case to the general two-variable optimization problem; it defines an upper boundary of the optimum capacity of these plants. In addition to providing the initial value for the iterative solution procedure, it also can be used to obtain a quick order-of-magnitude estimate of the plant capacity in cases where an approximate figure is sufficient. The solution presented here is exact and avoids the lengthy and time-consuming calculations involved in numerical calculations. In addition, it provides valuable insight into the interaction of some variables and their individual and cumulative effects, thus providing useful guidance in design. Only plants with single tunnels are considered and constraints that could narrow the choice of tunnel diameter are disregarded. The solution is obtained either by iteration or step-by-step evaluation of the optimality conditions. It is shown that if the relationship between capacity and tunnel diameter is not taken into account, the plant design may be substantially at variance with the optimum. (Rochester-PTT)

DESIGN OF PERVIOUS PRESSURE TUNNELS,

Eidgenoessische Technische Hochschule, Zurich (Switzerland). Versuchsanstalt fuer Wasserbau, Hydrologie und Glaziologie.
A. J. Schleiss.
Water Power and Dam Construction, Vol. 38, No. 5, p 21-26, May 1986. 13 fig, 1 tab, 32 ref.

Descriptors: *Tunnel design, *Rock properties, *Tunnel hydraulics, *Permeability, Hydraulic design, Seepage, Hydraulic engineering, Differential equations.

A new design procedure for pressure tunnels takes into account the seepage pressures and the influence of fracture deformation on secondary permeability in rock masses. The porous, thick-walled cylinder theory, computation of pervious tunnels, and mechanical-hydraulic coupling are analyzed, including the differential equation for radial displacement of the cylinder, deformations and stresses, influence of mechanical boundary loads, a pressure tunnel with uncracked concrete lining, reach of the seepage flow pattern, effect of cracks in lining and rock effect of rock grouting, influence of fracture deformation on secondary permeability, the thick-walled cylinder with stress-dependent permeability, and an pressure tunnel with stress-dependent permeability. Design criteria are discussed for avoiding cracks in the lining, limiting water losses, and ensuring the bearing capacity of the rock masses. (Rochester-PTT)

Descriptors: *Entrainment, *Mathematical models, *Pumped storage, *Reservoirs, *Inflows, Jets, Simulation models, Water quality.

During hydropower generation and pumpback operations of pumped-storage projects, inflows are introduced into the reservoir system. These jetlike inflows often cause considerable entrainment of ambient water. The entrainment process can have a strong influence on the vertical distribution of reservoir water quality when pumped-storage inflow jets are discharged into a stratified reservoir. The objective of this study was to develop algorithms to describe the pumped-storage inflow entrainment process for use in reservoir water quality models. Pumped-storage inflow jets fall into two classes: strongly or weakly buoyant. The former class has been fairly extensively studied, and well-established mathematical models exist to predict their behavior. For this case, incorporation into a reservoir thermal model simply required adaptation of existing code. For the latter case, however, that of weakly buoyant jets, it was found that little information existed of either a theoretical or experimental nature. For that reason, an extensive series of experiments of a fundamental nature were performed on weakly buoyant jets into arbitrary stratification. The results were then reduced to a form suitable for inclusion into reservoir water quality simulation models. The developed algorithms were incorporated into an existing reservoir thermal simulation code, and a test application was made for Carters Lake, a Corps of Engineers pumped-storage project in Georgia. WAVE INTERACTION WITH A RECTANGULAR TRENCH,

California Inst. of Tech., Pasadena. W.M. Keck Lab. of Hydraulics and Water Resources.
F. C. K. Ting, and F. R. Raichlen.
Journal of Waterway, Port, Coastal and Ocean Engineering (ASCE) JWPED5, Vol. 112, No. 3, p 454-460, May 1986. 1 tab, 6 fig, 4 ref.

Descriptors: *Waves, *Trenches, *Fluid mechanics, Kinetics, Channel improvement, Dredging.

An initial phase of an investigation of the wave-trench interaction in a constant density fluid revealed an apparent effect of the relative wavelength and the trench geometry on the reflection and transmission characteristics of the trench and on the kinetic energy of the fluid within the trench compared to that in the incident progressive wave. This frequency selectivity may be related to a resonant condition in the trench although the details of this are not clearly apparent. The velocities near the corners of the trench are intensified by the flow process. These results are of consequence in the process of aging of navigation channels duc to waves and currents where channel dredging modifies the near bottom kinematics which can then affect the channel shape. ARMOR LAYER STABILITY OF RUBBLE-MOUND BREAKWATERS,

P. A. Hedar.
Journal of Waterway, Port, Coastal and Ocean Engineering, (ASCE)/JWPED5, Vol. 112, No. 3, p 343-350, May 1986. 5 fig, 8 ref, append.

Descriptors: *Breakwaters, *Mathematical models, *Stability analysis, Rubble-mound, Wave height, Permeability, Angle of repose, Slope stability, Rocks.

Improved stability formulas for rubble-mound breakwaters calculate the required weight of the armor units in the cover layer reflect the complex phenomena, and take into account the most important parameters affecting the stability. The influence of the wave climate, the difference between the angle of repose and the slope angle, the density of the block material and the fluid, and the permeability of the underlayers are involved. The weight of the armor units under no-damage conditions is determined. The difference in the weight Q of armor units calculated from the given equation, which consider permeability of underlayers and interlocking is considerable compared with those calculated using existing equations. The block weight Q will get larger as the breaking wave height increases with increasing wave period. The required block weight under no-damage conditions varies to a high degree and to an extent that does not appear when using a previously developed formula. The most suitable gradient of the slope for the armor layer is from 1 on 2 to 1 on 3. (Peters-PTT)

EFFECTS OF WATER INTERACTIONS ON ENGINEERING STRUCTURES,

Binnie and Partners, London (England).
A. N. James, and K. J. Edworthy.
Hydrological Sciences, Vol. 30, No. 3, p 395-406, September, 1985. 5 fig, 25 ref.

Descriptors: *Structural engineering, *Earth-water interfaces, Dissolution, Rocks, Water analysis, Groundwater movement, Erosion.

The interactions of water with soil and rock are important to many engineering structures built to contain or transport water. These structures, built on soluble rock or soil foundations, may depend on rates of dissolution caused by water seeping through joints, fissures, or granular zones. Previous papers have defined the rates of dissolution for soluble rocks by means of a simple equation: dM/dt = K A (Cs - C) to the theta power. This relationship may be used as an aid to prediction of enlargement of joints and fissures in rocks, settlements of granular foundation strata, the deterioration of filters, risks to shallow but intensely loaded foundations, and durability of underground storage caverns in soluble rocks. Predicting the effects of dissolution of soluble rocks or soils depends, sometimes critically, upon the solution potential of the water reaching the soluble materials. Particularly at the planning stage, but also in the specification of remedial measures, consultation with hydrologists is advisable to achieve a full understanding of the groundwater flow and chemistry and of the surface/groundwater interconnections. MORPHOLOGIC EFFECTS OF CHANNELIZATION: THE CASE OF THE NEEBING-MCINTYRE FLOODWAY, THUNDER BAY, ONTARIO, CANADA,

Lakehead Univ., Thunder Bay (Ontario). Dept. of Geography.
H. Rasid, B. A. M. Phillips, and M. Oosterveld.
Environmental Management, Vol. 9, No. 5, p 399-416, September, 1985. 12 fig, 6 tab, 30 ref.

Descriptors: *Channel morphology, *Neebing-McIntyre Floodway, *Floodways, Erosion, Sediment yield, Hydraulic geometry, Backwater effect, Maintenance, Canada, Energy gradient, Sediment transport.

A study was conducted to compare the post construction morphology of a channelization project with the preconstruction morphology of the channelized streams and to postulate the most immediate morphological effects of such channelization. The Neebing-McInyre floodway, in Thunder Bay, Ontario, Canada, was constructed with a relatively straight and uniform trapezoidal channel, compared with the prechannelized sinuous reaches of the Neebing and the McIntyre Rivers. The flow regime of the floodway also contrasts significantly with the prechannelized regime, because of the combination of discharges from these rivers into a new channel and the regulation of flows by a diversion structure. The maximum channel capacity of the floodway is 284 cu m/s (175-year regional flood), compared with about 40 cu m/s and 60 cu m/s, respectively, for the Neebing and McIntyre. According to regime theories, the construction of a straight and trapezoidal channel has upset the equilibrium of the stream system and therefore should lead to some accelerated erosion and sedimentation processes in the new channel immediately after construction. Erosion potential is paticularly high during higher discharge events. The overall sediment yield of the watersheds of North America, but due to the backwater effect of Lake Superior. Unless maintained by constant channel work, the floodway will tend to fill up with sediment, until a postconstructional equilibrium is reestablished. (Peters-PTT)

INNOVATIVE DESIGN OVERCOMES MULTIPLE INSTITUTIONAL BARRIERS AT HYDRO PLANT,

J. Reason.
Power, Vol. 130, No. 4, p 120-122, April 1986. 8 fig.

Descriptors: *Powerplants, *Electric power plants, Massachusetts, Lowell, Merrimack River, Fish ladders, Gravity dams, Tourism, Hydraulic turbines, *Institutional constraints, Recreation facilities.

When a new 15 MW low head hydroelectric project was first proposed in the center of Lowell, MA, the Department of Energy gave it a 20 percent chance of ever being completed because of institutional barriers. The major problems were the protection of Lowell's many historic structures along its canal system and the protection of fish in the Merrimack River. Despite these hurdles, the project was completed one month ahead of schedule and is now generating revenue for its owner, Boott Hydropower Inc. The powerhouse was designed with a low profile, set into the riverbank in an 80 ft deep excavation. The Northern Canal runs from the Pawtucket Dam 2200 ft along the side of the river before turning inland to divert water into the forebay. A small lock, built at the right-hand end of this dam permits Park Service tour boats to navigate the entire canal. At the Pawtucket dam a new fish ladder was built with lampblack-darkened concrete to blend in with the weathered stone. At the powerhouse, migrating fish are collected in an elevator, raised to a window where a Fish and Wildlife Service biologist counts them, and passed either into the canal or back to the river. The 13 foot diameter direct driven hydraulic turbines turn at 120 rpm. (Peters-PTT)

POWER FROM MINE COOLING WATER,

Foster-Miller, Inc., Waltham, MA.
R. N. Torbin, and E. Thimons.
Power Engineering, Vol. 90, No. 3, p 27-28, March 1986. 3 fig, 1 tab, 1 ref.

Descriptors: *Turbines, *Generators, *Energy conservation, *Hydroelectric plants, *Mines, Idaho, Cost analysis, Performance evaluation, Cooling water.

Results of a demonstration project are described in which a turbine-generator system was installed in the Lucky Friday deep mine, Mullan, Idaho, and used to recover potential energy of cooling water flow, thereby increasing efficiency of the refrigeration system as well as generating electrical power at a considerable saving. The turbine-generator employed could produce 210 kW of power at an average flow of 31.5 liter/sec with an inlet head of 840 m. In three performance tests, head and flow data were identical to predicted values, indicating that the difference between actual and predicted performance of the system was caused by lower than expected efficiency of the turbine, generator, or electrical system. However, the actual system efficiences were deemed acceptable. By the end of August 1985, the system had run 10 months without any major problems and had produced more than 1,000,000 kWh of power. This resulted in a gross savings of approximately 25,000 dollars. (Rochester-PTT)

SMALL HYDRO CASCADE DEVELOPMENTS IN CHINA,

Hangzhou Regional Center For Small Hydropower (China).
D. Guangquan.
Water Power and Dam Construction, Vol. 38, No. 2, p 16-20, April 1986. 6 fig.

Descriptors: *Run-of-river, *China, *Cascade hydroelectric systems, *Flow regulation, *Electric power demand, Hydroelectric power, Economics, Developing countries.

Because of seasonal variation in stream flow and daily fluctuations of load, it is difficult to balance the supply and consumption of electric power with run-of-river small hydro power (SHP) stations in China. Cascade developments involving a number of stations can help solve these problems. Planning and operation of cascade SHP developments are described including the characteristics of five differently-configured cascade schemes in China and a summary of the characteristics of the cascade schemes on the He Jiang River tributaries. Cascade developments, where one or several reservoirs regulate stream flow can make full use of both the head of the river and the regulated flow, and hence can balance supply and demand of electricity in small grids. Many SHP-developed counties in China have proceeded with cascade developments on small streams. These stations have become the backbone of the county grids, greatly improving the reliability of electricity supply and providing significant economic benefits. (Rochester-PTT)

STANDARD DESIGN FOR SIX MINI HYDRO SITES IN INDONESIA,

Beca Worley International, Auckland (New Zealand).
P. S. Crighton, G. L. Barker, and J. M. Magyari.
Water Power and Dam Construction, Vol. 38, No. 2, p 26-30, April 1986. 7 fig, 4 tab.

Descriptors: *Design standarization, *Indonesia, *Run-of-River hydro, *Hydroelectric power, *Cost analysis, Francis turbine, North Sumatera, Hydroelectric engineering, Developing countries.

A rational approach is presented for the development of mini hydro sites using one design for multiple sites. Small sacrifices in efficiency resulting from this approach are compensated by savings in development costs, an important consideration for developing countries. This technique has been applied successfully to a project to develop six mini hydro sites in North Sumatera, Indonesia. Standard designs were prepared for the following components and fitted to each site plan: weir and river bypass culvert, diversion intake, de-sand channel, canal, penstock intake and penstock, powerhouse, generating equipment, switchgear, protection and control, and gates. A horizontal Francis turbine was selected. The total installed capacity at the six run-of-river sites was 6,000 kW; the total development cost was 12.66 million US dollars, with a per kilowatt average cost of 2,110 dollars. (Rochester-PTT)

Water Power and Dam Construction, Vol. 38, No. 2, p 54-57, April 1986.

Descriptors: *Small hydro, *Jones fork, *California, *Pressure regulator valve, *Surge tank, Penstock, Tunnels, Intakes, Seismicity, Design, Planning, Environmental studies, Intakes, Hydraulic equipment, Upper American river project, Sacramento Municipal Utility District, Cost analysis.

The Jones Fork hydroelectric project of Sacramento (California) Municipality Utility District includes development, planning, preliminary design, licenses, permits, and environmental studies, exploration and survey, seimicity, intake structure, power tunnel, penstock, and powerhouse and equipment. This portion of the Upper American river project is a 182.9 m head hydroelectric project providing 10 mW of dependable capacity. The project requires a 3,048 m long penstock and tunnel to capture the head and flow between two existing reservoirs. Because the topography did not permit siting of an economical surge tank, the pressure and speed rise are controlled with a synchronous poly-jet pressure regulator valve. (Rochester-PTT)

DEVELOPING SMALL HYDRO IN INDIA,

Teknow Consultants and Engineers Pvt. Ltd., New Delhi (India).
D. R. Sikka.
Water Power and Dam Construction, Vol. 38, No. 2, p 59-60, April 1986.

Descriptors: *Small hydro, *Micro hydro, Mini hydro, *India, *Hydroelectric power, Electric power production, Management planning, Canal drops, Irrigation, Agriculture, Rural industries, Developing countries.

The potential role of small hydro in India and the problems delaying small hydro application are discussed. Small hydro in India consists of 83 stations producing 140 MW, with 43 stations under construction accounting for a total capacity of 120 MW, and 100 schemes under consideration with a potential 320 MW. About 230 micro/mini hydro stations have been constructed since 1897, and account for 45 MW. Serious delays occur in design, model experiments and manufacturing, and in matching civil works and coordinating with manufacturers. The total potential from small hydro projects is 6,000 MW, of which 1,000 MW is from irrigation canal crops. Micro hydro energy systems can be used in rural areas to augment the supply of energy for agriculture and rural industries. (Rochester-PTT)

IN: Advances in Hydrometry, IAHS Publication No. 134, 1982. Proceedings of a Symposium at the First Scientific General Assembly of the IAHS, July 19-30, 1982, Exeter, England. p 203-213, 5 fig, 1 tab.

Descriptors: *Flow measurement, *Ultrasonics, *Flowmeters, *Current meters, *Flow discharge, Hydrometry, Gages, Hydraulic equipment, Cooling water, Thermal powerplants, Discharge measurement.

Occasional flow measurements with conventional current meters are often too time- and labor-consuming to be practicable for field investigations on the water systems of large industrial and agricultural consumers. Measurements under extreme conditions departing from normal operation are especially difficult. These measurements conflict with the interests of operation, but are essential for plotting performance curves. In such cases the ultrasonic method of flow measurement can be applied to advantage and with acceptable accuracy. Under adverse conditions of installation the integrating type of ultrasonic measurement proved successful. (See also W86-04785) (Author's abstract)

SUBMERSIBLE PROPELLER PUMP AS AN ALTERNATIVE TO THE TUBULAR AXIAL FLOW PUMP,

Werk Bremen (Germany, F.R.). Water Pumps Div.
H. Knopp.
Water Services, Vol, 90, No. 1080, p 55-56, 59, February 1986. 9 fig.

Descriptors: *Pumps, *Drainage, *Effluents, Submersible propeller pump, Tubular axial flow pump, Hydraulic equipment, Leakage.

The combination of the classical tubular axial flow pump for drainage and the standard submersible pump for discharging effluent has resulted in the submersible propeller pump. With the reliable hydraulics of the propellar tubular axial flow pump and the proven combination of the dry running asynchronous motor with the double mechanical seal the submersible motor propeller pump is an alternative to the tubular axial flow pump. Depending on plant conditions the choice of one type or the other can only be determined by an evaluation of the technical and industrial advantages and disadvantages by the user/planner of the plant together with the pump supplier. The submersible propeller pump, type PNT, consists of three units: motor, cables with cable glands, and pump section. The sealing combination is important. Two single acting mechanical seals with rubber bellows in tandem guarantee the lowest leakage rates. The bearing with the mechanical seals is placed near the impeller which has a small shaft diameter. The leakage rate and/or the wear is dependent on the circumferential speed and thus on the diameter of the sealing surfaces and the radial bearing. Some advantages of the submersible propeller pumps include relatively low noise level, lighter weight than a comparable tubular axial flow pump, no above surface structure, easily moved, and the intake structure can be smaller than that of a tubular axial flow pump with an air cooled motor because of the well cooled motor surface of the submersible propeller pump. SEAWATER PUMPED-STORAGE SCHEME UNDER STUDY IN JAPAN,

Electric Power Development Co. Ltd., Tokyo (Japan). Construction and Engineering Dept.
T. Hashimoto.
Water Power and Dam Construction, Vol. 38, No. 2, p 9-11, February 1986. 2 fig.

Descriptors: *Pumped storage, *Artificial lakes, *Japan, *Hydroelectric plants, *Fouling, *Sealants, *Breakwaters, Okinawa, Marine organisms, Reservoir, Environmental studies, Turbidity, Wave dissipation.

Current investigations and research being conducted for a seawater pumped-storage scheme in Okinawa, Japan, are outlined. The scheme calls for generation of a maximum output of 150 MW (3 x 50 MW units) as a source of peak power supply, and includes an excavated upper pond. The problem of sea-water seepage, marine fouling, and preliminary environmental investigations are discussed. Main features of the design include: (1) choice of an excavated type of pond, so that the site could be selected to keep the waterway as short as possible and to eliminate the need for a spillway; (2) watertightness of the pond is achieved using waterproof sheets (ethylene propylene terpolymer rubber tested best) and a drainage layer behind the sheets to collect any seepage for pumping back into the pond; (3) maintaining high flow velocity in the waterway to prevent adherence of marine organisms; and (4) introduction of breakwaters and wave dissipation works to avoid turbidity in the tailrace area (and the intake while pumping). (Rochester-PTT)
W86-04995

BATH COUNTY: THE WORLD'S LARGEST PUMPED-STORAGE PLANT COMMISSIONED,

Virginia Power, Warm Springs.
R. Sullenberger.
Water Power and Dam Construction, Vol. 38, No. 2, p 12-13, February 1986. 2 fig.

Descriptors: *Pumped storage, *Virginia, *Bath county, *Hydroelectric plants, *Construction, Dam construction, Tunnel construction, Reservoir construction, Penstocks, Turbines, Peaking power, Scheduling, Powerplants.

Construction of the 1.65 billion dollar Bath County, Virginia, pumped-storage plant is reviewed. The plant began commercial operation in December 1985. It adds 2,100 MW of peaking power to a six-state service area. The main features of Bath County include the 500 x 200 x 150 ft powerhouse, two earth- and rock-filled dams containing 22 million cu yd of material, and about 12 miles of tunnels. Although the powerhouse is above ground, it will experience the greatest submergence of any structure of its type, because of a fluctuation of 60 ft in water depth of the lower reservoir. Seepage into the structure has been insignificant during the first full reservoir filling. There are six Francis-type pump-turbine generator motor units, rated at 350 MW each, and operating at a maximum head of 1,262 ft. Particular construction difficulties were encountered due to penstock rupture, in welding of spiral casings, and due to leakage of one penstock lining, which required drilling and grouting involving injection of about 90,000 bags of cement. Civil structure areas and dams were constructed ahead of schedule; during this phase a world record was set in continuous underground jumpform pumping. (Rochester-PTT)
W86-04996

SCALE MODEL TESTS FOR AUSTRIA'S KUHTAI PUMPED-STORAGE PLANT,

Technische Univ., Graz (Austria). Dept. of Hydromechanics, Hydraulics and Hydrology.
H. Simmler, and E. Kresnik.
Water Power and Dam Construction, Vol. 38, No. 2, p 14-16, February 1986. 9 fig, 6 ref.

Descriptors: *Hydroelectric plants, *Pumped storage, *Austria, *Hydraulic models, *Hydraulic engineering, Kuhtai pumped storage plant, Scale model tests, Powerhouse intake, Outlet structure, Vortices, Approach flow, Pumping, Uniform flow, Powerplants.

The history and present status of pumped-storage in Austria, and its relationship to the country's topography and hydrology are outlined, followed by a description of the results of hydraulic scale model testing for the design of the powerhouse intake and outlet structure for the Kuhtai pumped-storage scheme. Hydraulic scale model tests were conducted to ensure that two essential requirements were met, namely: (1) establishing an approach flow free of air-entraining vortices, that is, an air-free and low-vorticity flow, to the intake structure, and (2) establishing a uniform and irrotational approach flow from the draft tube. Theoretical concepts and results of the tests are described for the vortex problem (pumping mode) and flow conditions in the pressure shaft (pumping mode). It is concluded that for pump intakes, and for inlets in general, where the formation of strong vortices or even air-entraining vortices is to be avoided, a theoretical approach will rarely be reliable enough in view of the complexity of the marginal conditions that govern flow. The same applies where a smooth and uniform approach flow to the draft tube inlets is to be established. Scale model tests help to devise means of preventing efficiency losses or disturbances during operation. (Rochester-PTT)

CONSTRUCTION OF CZECHOSLOVAKIA'S DLOUHE STRANE PROJECT,

Hydroprojekt, Brno (Czechoslovakia).
M. Janda.
Water Power and Dam Construction, Vol. 38, No. 2, p 23-26, February 1986. 3 fig, 2 tab.

Descriptors: *Pumped storage, *Dlouhe strane, *Czechoslovakia, *Peaking capacity, Construction, Design, Tunnels, Pump-turbines, Automation, Ostrava, Moravia, Hydroelectric plants, Powerplants, Desna River.

The role of pumped-storage in Czechoslavakia is reviewed, and details of the design and construction to date of the 650 MW Dlouhe Strane project are described. Dlouhe Strane is sited in northern Moravia, where favorable geomorphologic conditions were found. The upper reservoir is at 1,350

m, and the lower one is in a deep valley of the Desna River. Two tunnels of 3,600 mm diameter will connect the hydro plant with the upper reservoir. An underground machine hall is the main structure of the scheme; the cavern is 25 m wide, 50 m high, and 87 m long. Two reversible Francis pump-turbines, each with a maximum output of 325 MW and a pumping output of 312 MW, will be used. After commissioning, the pumped-storage plant will serve not only during peaks in the daily and weekly loading schedules, but for standby in cases of losses in the distribution system. Operation of the power station will be fully automated, primarily between the pumping unit and the turbine. A major advantage of the station is its proximity to the Ostrava industrial region. (Rochester-PTT)

ELECTRO-MECHANICAL EQUIPMENT FOR THE KALAYAAN PUMPED-STORAGE PLANT,

Gruppo Industrie Elettromeccaniche per Impianti all'Estero, Milan (Italy).
F. di Gioia.
Water Power and Dam Construction, Vol. 38, No. 2, p 33-36, February 1986. 5 fig.

Descriptors: *Kalayaan, *Phillipines, *Pump-turbines, *Hydroelectric plants, *Pumped storage, Pumping, Electric power production, Powerplants.

Characteristics are described for the first two single-stage reversible pump-turbine units, each rated at 150 MW, recently completed at the Kalayaan pumped storage plant in the Phillipines. These include the power station, electro-mechanical equipment (upper and lower intakes, penstock, spherical valves, pump-turbines, motor-generators, and step-up transformers), electrical and electronic equipment (control room, service building, control building, and switchyard), and pump starting methods. The project takes advantage of two existing reservoirs and when the remaining units are in place it will have a rated capacity of 1,800 MW. Pump starting is accomplished by three different sequences: a pony with the runner in air (normal sequence); back-to-back (one unit only) with the runner in air, using about 4 MW power from the other unit; and back-to-back (one unit only) with the runner in water and the spherical valve closed, using about 35 MW from the other unit. The distinctive feature of the Kalaayan plant is its flexibility of operation because of its rapid connection to the network, which includes geothermal and thermoelectric stations, and because of its wide range of operational modes. (Rochester-PTT)
W86-04999

CONSTRUCTION OF SPAIN'S CORTES-LA MUELA SCHEME,

Hidroelectrica Espanola, Madrid.
N. Nevalon.
Water Power and Dam Construction, Vol. 38, No. 2, p 37-41, February 1986. 6 fig.

Descriptors: *Hydroelectric plants, *Spain, *Cortes dam, *La Muela, *Pumped storage, *El Naranjero dam, *Reservoirs, Geology, Nuclear powerplants, Cost analysis, Intakes, Conduits, Tunnels, Powerplants.

The Cortes-La Muela project, currently under construction, will provide 870 MW of peak power for East Spain, while complementing, with 540 MW of pumping capacity, the operation of a nearby nuclear plant. The main project features two dams, two powerplants, and an artificial reservoir. The two powerplants are linked hydraulically through the reservoir created by Cortes dam, and electrically connected by a single switchyard that allows the direct coupling of the units for back-to-back start-up. Cortes II is a conventional hydroelectric plant the downstream reservoir of which, El Naranjero, is used for flow regulation, whereas La Muela is a pure pumped-storage plant. The total cost of the project will be about 750 million dollars, including interest during construction and price escalation. Commissioning of the Cortes II machinery is scheduled for mid-1988, whereas the units at La Muela will begin operation in the first half of 1989. Exploration work, geology, Cortes dam and reservoir, Cortes II powerhouse, El naranjero dam and reservoir, La Muela upper reservoir, water intakes and conduits, powerhouse and transformer caverns, and project status are described. (Rochester-PTT)

CHINA'S FIRST WORLD BANK-ASSISTED HYDRO SCHEME,

Ministry of Water Resources and Electric Power, Beijing (China).
C. Xuemin.
Water Power and Dam Construction, Vol. 38, No. 2, p 41-44, February 1986. 2 fig.

Descriptors: *Hydroelectric plants, *China, *Lubuge hydropower project, *World Bank, *Contracts, *Bids, Project management, Japan, Norway, Australia, Germany, Turbines, Generators, Powerhouse, Headworks, Hydraulic system, Rockfill dams, Consultants.

Project layout, headworks, hydraulic system, powerhouse complex, and contracting and financing arrangements are described for the Lubuge hydropower project on the Huangni River, China. This project, with a design capacity of 600 MW, is the first hydro project to be financed with a World Bank loan. It will comprise a 101 m-high rockfill dam, a 9 km-long power tunnel with an underground powerhouse, and is scheduled for completion in 1988. The contracting and bidding practices employed on this project followed international competitive bidding practice, which differed significantly from the methods used by the Chinese government in building more than 100 major hydro stations and 80,000 small hydro plants since 1949. An Australian consultant reviewed the design and cost estimate, a Japanese contractor received the contract to build the hydraulic system, a Chinese construction force works on the headworks and powerhouse complexes, and turbine from Norway and generators from Germany are being used. Some difficulties were encountered, but the success and merits of using foreign consultants have been acknowledged by people at various levels in China. (Rochester-PTT)

TECHNIQUES FOR SOVIET PUMPED-STORAGE PLANT CONSTRUCTION,

Vsesoyuznyi Gidroproektno-Izyskatel'skii i Nauchno-Issledovatel'skii Inst. 'Gidroproekt', Moscow (USSR).
L. P. Mikhailov.
Water Power and Dam Construction, Vol. 38, No. 3, p 20-23, March 1986. 10 fig, 2 ref.

Descriptors: *Pumped storage, *USSR, *Dam construction, *Hydroelectric plants, Concrete, Hydraulic engineering, Design, Conduits, Dikes, Cost analysis, Economies of scale, Powerplants.

The standardized approach to production of pumped-storage plants as carried out in the USSR is described. At present there are 11,700 MW of aggregate capacity under construction. For projects of similar construction geology and heads around 100 m it has been found practical to standardize the main structures to accommodate mass-produced 200 MW units designed for that head. Standardization of designs for pumped-storage stations leads to economies of scale and cuts the cost of design and engineering work. Reinforced concrete structures of powerhouses, water intake/outlets of the upper reservoirs, and penstocks were the first components to be standardized. Powerhouses of a conventional type are designed as a continuous structure that is divided into sections: central, standard, and side sections adjoining the abutments. The powerhouse construction is fully standardized below the level of the machine hall floor, with variations above this level adopted depending on the water level variation in the lower reservoir. One of the main standardized structures is the water conduit, with inner diameter of 7.5 m, maximum water static pressure of 1.23 MPa, and maximum dynamic pressure of 1.71 MPa. Conduit joints, concrete handling procedures, and dike protection measures also are described. (Rochester-PTT)

HYDRO PLANT FREQUENCY REGULATION,

Motor-Columbus Ingenieurunternehmung A.G., Baden (Switzerland).
F. de Leva.
Water Power and Dam Construction, Vol. 38, No. 5, p 27-31, May 1986. 15 fig, 4 ref.

Descriptors: *Penstock, *Electric equipment, Hydroelectric plants, *Hydraulic engineering, Networks, Powerplants.

Penstock and generator design influence the frequency response of a hydroelectric powerplant. Means are provided for estimating the values that such parameters should have as a function of the desired quality of the frequency regulation. The behavior of a powerplant was simulated when a sudden load decrease occurs; the plant operates on an isolated network with resistive loads only. Although these assumptions are restrictive and the conditions described do not normally occur, the results are useful in cases of parallel operation of a plant with other units because comparative criteria can be established for the determination of the frequency regulation quality of a powerplant. Furthermore, the method presented also permits determination of the effects that changes in penstock and generator parameters have on the capacity to respond to load variation. Of primary importance to the quality of frequency regulation is the penstock inertia constant, which is defined as penstock length x steady-state flow/gravity acceleration x steady-state head x permanent penstock area. This parameter should be kept as low as possible because when its value is high, an increase in generator inertia has only a limited effect on improving the quality of frequency regulation. The value of the penstock inertia constant may be decreased by shortening the penstock or increasing its diameter to lower the water velocity. (Rochester-PTT)

SMALL ASYNCHRONOUS HYDROGENERATORS AND THEIR CONTRIBUTION TO ENERGY RECOVERY IN THE WATER INDUSTRY,

Severn-Trent Water Authority (England). Soar Div.
G. H. Thorp.
Journal of the Institution of Water Engineers and Scientists, Vol. 39, No. 4, p 301-314, August 1985. 5 fig, 2 tab.

Descriptors: *Hydrogenerators, *Hydroelectric power, *Energy recovery, *Reservoirs, Hydraulic turbines, Turbines, Financial feasibility, Hydraulic properties, Electric power production, Electrical equipment.

The basic requirements for the optimization of hydrogenerator system performance are outlined with consideration of financial viability. The design, installation, and commissioning of a Hayward Ryler asynchronous submersible hydrogenerator at Gilroes reservoir is recounted and its effective contribution to energy recovery discussed. The energy recovery system is based on an average inflow to the reservoir of 162 L/sec which, allowing for an estimated recovery efficiency of 65%, gives an average energy recovery of 33 KW of usable electricity. After 6 mo. of operation the hydrogenerator system has proved to be practical. The use of solid state devices where possible has minimized the cost of the ancillary devices needed to operate the turbine. It is concluded that small hydrogenerators like the one installed at Gilroes are practical and, if reliable, are a cost effective contribution to energy recovery. (Peters-PTT)

SIMPLICITY IS MARK OF PUMP STATION IN THE ROUND,

W. Stevens, and W. Williams.
Water/Engineering & Management, Vol. 133, No. 4, p 21-22, 24-25, April 1986.

Descriptors: *Pumping plants, *Houston, *Sewer systems, *Wastewater facilities, Cylindrical lift station, Maintenance, Hydraulic equipment.

A pumping station, now in an advanced construction stage in Houston, TX, will become a key part of Houston's huge Northside wastewater project. The cylindrical configuration, of the 370 mgd facility, produces significant construction advantages. The cylindrical geometry permitted the entire facility to fit into the confines of a restricted site bounded by railroad rights of way and a major road. It also made it favorable to employ sunken caisson construction, which provided substantial economies. The peripheral wall is 66 ft in diameter while the interior wall, forming a central core, has an inner diameter of 34 ft. Entering the structure through a 132 inch diameter sewer line, the influent will pass to the central core which acts as a surge tank to dampen turbulence. The influent chamber is located at the base of the central core, and has an inlet structure 67 feet below grade. Its floor slopes from the center toward the central core wall. The effluent chamber is located within the central core, approximately 40 feet above the influent chamber liquid level. Effluent discharges directly from it into a 132 inch sewer, with its invert at the same elevation as the effluent chamber floor. The floor has a 2% slope toward the sewer for drainage. The submersible pumps ride on vertical guide bars and can be readily hoisted out of wet well without the need for fastening or unfastening. Liquid level is controlled by the number of pumps operating. Each rise or fall of 9 inches in liquid level is sensed by a bubble system and causes one pump to be turned on or off. The station will operate unmanned. (Peters-PTT)

APPLICATION OF FUNCTIONAL ANALYSIS TO OPTIMIZATION OF A VARIABLE HEAD MULTIRESERVOIR POWER SYSTEM FOR LONG-TERM REGULATION,

Ain Shams Univ., Cairo (Egypt). Faculty of Engineering.
S. A. Soliman, and G. S. Christensen.
Water Resources Research WRERAO, Vol. 22, No. 6, p 852-858, June 1986. 1 fig, 7 tab, 10 ref. National Research Council of Canada Grant A4146.

Descriptors: *Functional analysis, *Varied flow, *Power head, *Reservoirs, *Hydroelectric power, *Long-term planning, Regulations, Mathematical analysis, Multi-purpose reservoirs, Water supply, Rivers, Stochastic hydrology.

Functional analysis and minimum norm formulation are employed to solve the optimal long-term problem of a hydro power system for maximum total expected benefits (benefits from energy generated by a hydro power system over the planning period plus the expected future returns from water left in storage at the end of that period). The method proposed in this paper has the ability to deal with large scale coupled power systems. Most of the current approaches use composite reservoirs. The proposed method takes into account the water head variation and the stochasticity of the water inflows. It is assumed that their probability properties are preestimated from past history. The expected value for these random inflows is used. Numerical results are presented for a real system in operation including up to six reservoirs for widely different water conditions. The computing time to get the optimal solution for this, using the proposed approach, was very small compared to the computing time using other techniques such as the Aggregation/Decomposition approach. SOME DEVELOPMENTS IN PRESSURE REDUCTION,

Bristol Waterworks Co. (England).
S. G. Bessey.
Journal of the Institution of Water Engineers and Scientists, Vol. 39, No. 6, p 501-506, December 1985. 2 fig, 1 tab, 3 ref.

Descriptors: *Leakage, *Water pressure, *Hydraulic equipment, Pressure distribution, Process control, Automation, Computer, Flow, Pumpage.

The Bristol Waterworks Company has utilized a microprocessor-based telemetry system of flow compensated pressure reduction since 1976. The company has found several economic limitations to the application of the computer-controlled pressure reducing valve and has pioneered the development of a hydraulically operated alternative for smaller zones. The hydraulic flow compensating pressure reducing valve (PRV) uses an orifice plate bolted to a standard PRV to sense flow rate. At higher flows, the high pressure differential across the orifice plate is transferred to the relay unit which causes the valve to open, delivering a higher outlet pressure. Remote users are more easily accommodated in a segmented large zone under several hydraulic valves due to the shorter distance involved and the ability to set each valve individually. The company's first conversion of a small induction motor-pumpset to variable-speed drive resulted in a reduction of energy use of 23% and in pumped quantity of 14%. The company is currently assessing the conversion of a fixed-speed autopneumatic station to variable-speed duty with flow compensation. (Geiger-PTT)

SUBMERSIBLE PUMPS HELP IMPROVE WATER SUPPLY FROM DEEP LIMESTONE WELL,

Bluffton Electrical and Water Utilities Dept., IN.
E. C. Davis.
Public Works, Vol. 117, No. 2, p 58-59, February 1986. 1 fig.

Descriptors: *Pumps, *Pumping, *Wells, *Pump wells, Pumping tests, Pumpage, Pump testing, Deep wells, Water supply.

An additional 144,000 gallons of pumpage per day was made possible at the Bluffton waterworks after well cleaning, providing a deeper setting of the submersible pumping unit, and modifying the standard submersible system and its installation. An air-control type of relief valve used in the discharge pipe prevented too-rapid air discharge at start-up and joint locking compound was applied to each of the threaded column pipe points to prevent unscrewing of the pump column due to starting torque. Pump and motor construction were of materials to resist chemical attack, and the pump was supplied with sufficiently large pump impeller passages to permit handling of small slugs during the cleaning process. Following well cleaning, a two-stage Ni-Resist pump with 8-inch bowls driven by a 2-pole, 6-inch, 40-hp Franklin submersible motor with Ni-Resist construction was installed. The success of the present experiment seems to have implications for the rejuvenation of wells of similar kind. (Geiger-PTT)

WORLD'S HIGHEST DAM CONQUERS HARSH ENVIRONMENT,

Vsesoyuznyi Gidroproektno-Izyskatel'skii i Nauchno-Issledovatel'skii Inst. 'Gidroproekt', Moscow (USSR).
I. Moiseev.
Water Power and Dam Construction, Vol. 38, No. 3, p 17-19, March 1986. 3 fig, 2 tab.

Descriptors: *Rogun dam, *Tadjik SSR, *Precipitation, *Snow, *Cold weather construction, *Dam construction, *Earth dams, *Rockfill dams, *Earthquake engineering, Hydroelectric plants, Tunnels, Gates, Permeability, Pore pressure, Soil water, Powerplant.

The main characteristics and special features of the 335 m-high Rogun earth- and rock-fill dam project in the Tadjik SSR are described. When complete the installed capacity will be 3,600 MW and the dam will be the highest in the world. The temperature at the site ranges from a maximum of 40 C to a minimum of -31 C, with annual precipitation reaching 816 mm, and with an average depth of snowfall in winter of 61 cm. The construction site is also in a zone of high seismic and tectonic activity. Among the noteworthy construction techniques are continuous cycle technique of dam construction, which calls for the combined use of vehicles and conveyer systems at the borrow area and at the dam. Other unusual design solutions include: the integration of discharge tunnels at the service outlet works with the surface and lower-level intakes, making one outlet system; the use of the end portions of the diversion tunnels as a tailrace tunnel; the use of the main gates in the diversion tunnels, designed for a head of up to 200 m; the use of the crane track supports in the gate chambers of the outlet works without the crane runway columns; and the use of cast concrete to fill the space behind the lining of the penstocks. The grade IX seismicity of the region dictated special measures to ensure dam stability, including: filling external dam zones with graded rock with a permeability coefficient of not less than 0.001 cm/sec; compaction of the material in the shells to an extent that prevents the development of dynamic pore pressure in the upstream shell in the event of subsidence deformation; and lower shearing strength characteristics of the soil material in the dam are adopted in the seismic impact stability analysis. EVALUATION OF ELECTRICAL RESISTIVITY METHODS IN THE INVESTIGATION OF KARSTIC FEATURES, EL CAJON DAM SITE, HONDURAS,

Florida Univ., Gainesville. Dept. of Geology.
D. L. Smith, and A. F. Randazzo.
Engineering Geology, Vol. 22, No. 3, p 217-230, April 1986. 12 fig, 7 ref.

Descriptors: *Electrical resistivity, *Karst, *El Cajon Dam, *Honduras *Electrode arrays, *Faulting, *Fracture Zones, *Dissolution features, *Damsites, *Dam construction, Wenner array, Schlumberger array, Bristow array, Pole-Dipole array, Cost analysis, Field tests, Humuya River.

Wenner electrode array, Schlumberger array, and Bristow (pole-dipole) array configurations of electrical resistivity measurements were used to detect the presence of subsurface dissolution features at the El Cajon dam site in Honduras. The construction site, located on the Humuya River in a region of extensive karst development, faulting, and mineralization along fracture zones, posed a special challenge to the application of standard resistivity techniques because of the presence of a cofferdam and the advanced stage of construction. Transects were made parallel and perpendicular to the river valley floor. The best results were obtained with the Schlumberger and Bristow array configurations. Several zones of anomalously high resistivity were detected. Subsequent drilling confirmed the presence of subsurface dissolution features that could have seriously jeopardized the dam. These surveys represent an accurate, economic, and reliable procedure for regions where construction has progressed significantly and where complex geologic terrain exists. (Author's abstract-PTT)

ON-SITE ASSESSMENT OF ROCK DISCONTINUITIES FROM RESISTIVITY LOGS. T-L LOG: A NEW LOGGING TECHNIQUE,
Imperial Coll. of Science and Technology, London (England). Div. of Engineering Geology.
G.-A. Tselentis.
Journal of Hydrology, Vol. 83, No. 3/4 p 269-283, March 1986. 1 tab, 12 fig, 5 ref.

Descriptors: *Rocks, *Resistivity, *On-site investigations, Discontinuities, Computers, Hydraulic properties, Fractures, Geophysical parameters, Rock properties.

The extent to which the discontinuities of a fractured formation can be assessed from parameters inferred from normal resistivity logs was examined. Using a microcomputer in series with the logging unit, a zonation process was applied to the logs, which were interpreted in terms of a series of beds, each having specific thickness and resistivity, and a new parameter defined by the difference between transverse and longitudinal resistivities was computed (T-L log). In almost all the cases in which the method was applied, the results were satisfactory and the microcomputer-based software and hardware package that was developed for the automatic processing of the data was very efficient. The logs were processed directly in the field by an ACORN-ATOM 8-bit, 32K microcomputer, and all the software necessary for data processing were kept in an EPROM Module. (Peters-PTT)

PLASTIC LINING ON RIVERTON UNIT, WYOMING,
R. W. Wilkinson.
Journal of Irrigation and Drainage Engineering JIDEDH, Vol. 111, No. 3, p 287-298, September 1985. 6 fig, 4 tab, 7 ref.

Descriptors: *Plastics, *Linings, *Riverton Unit, *Wyoming, Water conveyance, Polyvinyl-chloride, Irrigation engineering, Costs, Design standards, Construction, On-site investigations.

Since 1975, the Fureau of Reclamation has installed approximately 25.8 miles (41.5 km) of PVC (polyvinyl-chloride) lining in the distribution system of the Riverton Irrigation Project. The lining is part of a $40,000,000 rehabilitation program designed to stop waterlogging of adjacent farmland and conserve water. This paper describes this project through discussions covering: site investigations and surveys, design, specifications, construction, lining performance, and costs. The PVC sections have performed well. In the few occasions when the lining slid down the side slope, the slippage occurred either downstream of drop structures, or immediately upstream of inlet transitions for in-line structures. Final costs of 23 contracts involving the PVC lining are tabulated. (Peters-PTT)

RIVER BASINS,
Food and Agriculture Organization of the United Nations, Rome (Italy).
R. L. Welcomme.
Available from the FAO, Via delle Terme di Caracalla, 001000 Rome, Italy. Price: $7.50. FAO Fisheries Technical Paper 202, 1983. 60 p, 22 fig, 3 tab, 40 ref.

Descriptors: *River basins, *Fisheries, *Fish populations, *Fish management, *Fishing gear, Fish, Ecology, Fishing, Fish stocking, Water resources development, Erosion, Hydraulic structures, Water quality, Aquaculture, Fish farming.

Rivers may be divided into fast-flowing, upland reaches and slow-flowing, lowland reaches. The ecology of a river depends to a great extent on its flood regime. Fish are highly adapted to these seasonally repetitive events. Lowland reaches of rivers usually support fisheries of exceptional value. Capture methods vary with seasonal changes occurring in the fish communities. In general, there are three main levels at which fish stocks may be evaluated. The first consists of using rapid methods for the approximate evaluation of fish stocks based on extrapolation from other similar river systems. The second consists of the evaluation of the fishery through frame surveys and catch assessment surveys. The third level consists of more traditional methods for assessment of the stocks by experimental fishing. Changes in the quality of water through pollution causes a direct effect on fish, whereas other processes such as sedimentation and the presence of hydraulic structures may indirectly affect fish populations. Management techniques to compensate for the effect of these changes included the careful control fo the fishery within the natural environment as well as the abiotic factors which affect the aquatic system. W86-05162 5C

Food Size Spectra and Species Replacement within Herbivorous Zooplankton,
W86-05168 2H

In Situ Pulse Light Fluorometer for Chlorophyll Determination as a Monitor for Vertical and Horizontal Phytoplankton Distribution in Lakes,
W86-05175 2H

14C-Labelling Patterns of Phytoplankton: Specific Activity of Different Product Pools,
W86-05176 5A

Some characteristics of the Carbon Compounds Released by Daphnia,
W86-05185 2H

Zonation in Periphyton Colonizing Concrete Blocks on the Shore of Lake Zegrzynskie,
W86-05193 2H

ALGAL CONTROL
Algae Removal by Fine Sand/Silt Filtration,
W86-05344 5F

ALGAL GROWTH
Application of an Algal Assay to Assess Toxicity and Eutrophication in Polluted Streams,
W86-04780 5C

Photosynthetic Production of a Brackish Water Community of Chara Tomentosa L. and Its Dependence on Environmental Conditions,
W86-05151 2C

Epipelic Algal Flora of the River Wye System, Wales, UK. 1. Productivity and Total Biomass Dynamics,
W86-05158 2H

ALGICIDE
Controlling Taste and Odor with Chlorine Dioxide,
W86-04733 5F

ALGORITHMS
Determination of a Measuring Network Along Rivers,
W86-04811 7A

ALKALIMETRIC MONITORING
Improved Alkalimetric Monitoring for Anaerobic Digestion of High-Strength Wastes,
W86-05037 5D

ALKALINITY
Predicting pH, Alkalinity, and Total Acidity in Stream Water During Episodic Events,
W86-05250 5B

Regional pH-Alkalinity Relationship,
W86-05338 2K

ALLUVIUM
Tracer Measurements in Lowland Rivers,
W86-04797 7B

Simulation of Fluid Flow and Energy Transport Processes Associated with High Level Radioactive Waste Disposal in Unsaturated Alluvium,
W86-05223 5E

ALUMINUM
Effect of Al and Humic Acids on the 241 Am Adsorption on the Exoskeleton of the Crayfish Astacus Leptodactylus Eschscholtz,
W86-05328 5B

Alternative Aluminium Flocculants Controlling Micropollutants,
W86-05404 5F

ALUMINUM PHOSPHATE
Lake Restoration: A Five-Year Evaluation of the Mirror and Shadow Lake Project Waupaca, Wisconsin,
W86-04939 5G

ALUMINUM SULFATE
Alternative Aluminium Flocculants Controlling Micropollutants,
W86-05404 5F

AMAZON RIVER
Water Discharge and Suspended Sediment Concentrations in the Amazon River: 1982-1984,
W86-05222 2E

AMES ASSAY
Screening Complex Hazardous Wastes for Mutagenic Activity using a Modified Version of the TLC/Salmonella Assay,
W86-04709 5A

AMINO ACIDS
Occurrence of Cadmium in Crabs (Cancer pagurus) and the Isolation and Properties of Cadmium Metallothioneín,
W86-04756 5A

AMITROLE
Removal of Paraquat, Diquat, and Amitrole from Aqueous Solution by Chemically Modified Peat,
W86-05383 5G

AMMONIA
Inhibition Kinetics of Nitrification in Continuous-Flow Reactors,
W86-05052 5D

Effects of Chlorine and Ammonia from Wastewater Treatment Facilities on Biotic Integrity,
W86-05067 5C

Studies on the Acute Toxicity of Pollutants to Freshwater Macroinvertebrates: 3. Ammonia,
W86-05086 5C

AMMONIUM
Design of Trickling Filter Nitrification Towers,
W86-05021 5D

Ammonium Excretion and Glutamate Dehydrogenase Activity of Zooplankton in Great South Bay, New York,
W86-05184 2L

Atmospheric Ammonium Sulphate Deposition and Its Role in the Acidification and Nitrogen Enrichment of Poorly Buffered Aquatic Systems,
W86-05414 5B

Effect of Airborne Sulphur and Nitrogen Deposition on Aquatic and Terrestrial Heathland Vegetation,
W86-05416 5B

ANAEROBIC DIGESTION
Recent Developments in Hydrogen Management During Anaerobic Biological Wastewater Treatment,
W86-04746 5D

Anaerobic Biodegradation of a Recalcitrant Detergent Wastewater,
W86-04952 5D

Anaerobic Filtration of a Distillery Waste,
W86-04953 5D

Improved Alkalimetric Monitoring for Anaerobic Digestion of High-Strength Wastes,
W86-05037 5D

Anaerobic Treatment of Phenol by an Expanded-Bed Reactor,
W86-05053 5D

Characterization of Aerobic and Facultative Anaerobic Bacteria from the Liquid Phase of an Anaerobic Fixed-Bed Digester Treating a Cheese Whey Substrate,
W86-05199 5D

Application of the Upflow Anaerobic Sludge Bed (UASB) Process for Treatment of Complex Wastewaters at Low Temperatures,
W86-05263 5D

Methanogenic Digestion Using Mixed Substrate of Acetic, Propionic and Butyric Acids,
W86-05345 5D

ANDHRA PRADESH
Myco-Ecological Studies of Two Water-Bodies from Andhra Pradesh, India,
W86-05397 2I

ANDREWS MODEL
Kinetics of Anaerobic Purification of Industrial Wastewater,
W86-04745 5D

ANIONS
Automated Ion Chromatographic Determination of Anions In Precipitation Samples,
W86-04984 5A

ANISOTROPY
Decay of a Disturbed Free Surface in an Anisotropic Porous Medium,
W86-05119 2F

AQUATIC BACTERIA
Serotypes of Vibrio parahaemolyticus Isolates from Hydrobiologically Dissimilar Aquatic Environments,
W86-05062 5A

Impact of Physio-Chemical Stress on the Toxigenicity of Vibrio Cholerae,
W86-05105 5B

AQUATIC ENVIRONMENT
Environmental Fate and Aquatic Toxicology Studies on Phthalate Esters,
W86-04765 5C

Photodegradation of the Herbicide Glyphosate in Water,
W86-04961 5D

AQUATIC ENVIRONMENTS
Methods to Estimate Aquatic Habitat Variables.
W86-04822 5G

Serotypes of Vibrio parahaemolyticus Isolates from Hydrobiologically Dissimilar Aquatic Environments,
W86-05062 5A

AQUATIC HABITATS
Methods to Estimate Aquatic Habitat Variables.
W86-04822 5G

AQUATIC ORGANISMS
Effects of Synthetic Polyelectrolytes on Selected Aquatic Organisms,
W86-05050 5C

AQUATIC PLANTS
Distribution of Epiphytic Bacteria on Freshwater Plants,
W86-04696 2H

Detention Ponds: The Positive and the Negative,
W86-04738 4A

Wastewater Treatment Using Aquatic Plants. Survivability and Growth of Salvinia molesta (Mitchell) Over Waters Treated with Zinc (II) and the Subsequent Utilization of the Harvested Weeds for Energy (Biogas) Production,
W86-05294 5D

Role of Aquatic Plants in Wastewater Treatment by Artificial Wetlands,
W86-05342 5D

AQUATIC PRODUCTIVITY
Biomass and Production Estimates for an Estuarine Meiobenthic Copepod, with an Instantaneous Assessment of Exploitation by Flatfish Predators,
W86-05198 2L

AQUATIC VEGETATION
Effect of Airborne Sulphur and Nitrogen Deposition on Aquatic and Terrestrial Heathland Vegetation,
W86-05416 5B

AQUIFER CHARACTERISTICS
Analytical Solutions for Strip Basin Recharge to Aquifers with Cauchy Boundary Conditions,
W86-05108 2F

Analysis of Flow to a Large-Diameter Well During the Recovery Period,
W86-05401 4B

AQUIFER SYSTEMS
Groundwater Flow and Sand Body Interconnectedness in a Thick, Multiple-Aquifer System,
W86-05214 2F

AQUIFERS
Field Validation of the Geohydrology Simulation Model, FEWA,
W86-05071 5B

Two-dimensional Pollutant Migration in Soils of Finite Depth,
W86-05102 5B

Analytical Solutions for Strip Basin Recharge to Aquifers with Cauchy Boundary Conditions,
W86-05108 2F

Curvilinear Finite Element Model for Simulating Two-Well Tracer Tests and Transport in Stratified Aquifers,
W86-05213 2F

Orthogonal-Upstream Finite Element Approach to Modeling Aquifer Contaminant Transport,
W86-05256 5B

ARCHAEOLOGY
Papago Water Supply Project: Class III Archaeological Survey for Schuk Toak and San Xavier Districts; Research Design,
W86-04817 6G

ARID LANDS
Evidence for Movement of Heavy Metals in a Soil Irrigated with Untreated Wastewater,
W86-05322 5E

ARID ZONE
Chemical Reactions within Root Zone of Arid Zone Soils,
W86-05233 5B

ARIZONA
Papago Water Supply Project: Class III Archaeological Survey for Schuk Toak and San Xavier Districts; Research Design,
W86-04817 6G

Glen Canyon Dam's Quick Fix,
W86-04957 8A

AROMATIC COMPOUNDS
Simulated Transport of Polycyclic Aromatic Hydrocarbons in Artifical Streams,
W86-04824 5B

Removal of Aromatic Nitro-Compounds from Water by Ozonation,
W86-05148 5D

ARSENATE
Rapid Determination in Water of Chloride, Sulphate, Sulphite, Selenite, Selenate and Arsenate Among Other Inorganic and Organic Solutes by Ion Chromatography With UV Detection Below 195 nm,
W86-05302 5A

ARSENIC
Field Evaluation of Arsenic and Selenium Removal by Iron Coprecipitation,
W86-05015 5D

Compound-Specific Determination of Arsenite at Sub-nanogram Concentrations in Freshwater and Seawater,
W86-05107 5A

Microbial Transformations of Arsenic in Lake Ohakuri, New Zealand,
W86-05333 5B

Chemical Forms of Arsenic in Marine Organisms, with Emphasis on Hemifusus Species,
W86-05374 5B

ARSENIC COMPOUNDS
Microbial Transformations of Arsenic in Lake Ohakuri, New Zealand,
W86-05333 5B

ARTIFICIAL LAKES
Seawater Pumped-Storage Scheme Under Study in Japan,
W86-04995 8C

Zonation in Periphyton Colonizing Concrete Blocks on the Shore of Lake Zegrzynskie,
W86-05193 2H

ARTIFICIAL RECHARGE
Analytical Solutions for Strip Basin Recharge to Aquifers with Cauchy Boundary Conditions,
W86-05108 2F

ASH POND EFFLUENTS
Field Evaluation of Arsenic and Selenium Removal by Iron Coprecipitation,
W86-05015 5D

ASSIMILATIVE CAPACITY
Safe Use of the Assimilative Capacity of the Marine Environment for Waste Disposal - Is it Feasible,
W86-05376 5G

ATMOSPHERE
New Technique for Monitoring the Water Vapor in the Atmosphere,
W86-05097 2B

ATMOSPHERIC PHYSICS
Effect of Qinghai-Tibet Plateau Forcing on the Meso-Scale Rain-Bearing Circulation systems over Eastern China during Presummer Rainy Season,
W86-05090 2B

ATOMIC ABSORPTION SPECTROPHOTOMETRY
Simplified Method for the Extraction of the Metals Fe, Zn, Cu, Ni, Cd, Pb, Cr, Co and Mn from Soils and Sewage Sludges,
W86-05076 5A

AUBURNDALE
Durable Chemical Grout Solves 'Case of the Disappearing Lake',
W86-04742 8A

AUSTRALIA
Sediment Dynamics in a Partially Cultivated Catchment in New South Wales, Australia,
W86-05114 2J

Hydrologic Characteristics and Modelling of a Small Forested Catchment in Southeastern New South Wales. Pre-Logging Condition,
W86-05116 2E

Monitoring Effects of Catchment Management Practices on Phosphorus Loads into the Eutrophic Peel-Harvey Estuary, Western Australia,
W86-05357 5B

AUSTRIA
Scale Model Tests for Austria's Kuhtai Pumped-Storage Plant,
W86-04997 8C

AUTOMATIC THROTTLE HOSE
Automatic Throttle Hose - New Flow Regulator,
W86-05237 3F

AUTOMATION
Aspects of Utilizing Continuous Automatic Fish Biomonitoring Systems for Industrial Effluent Control,
W86-04774 5A

Two Less Conventional Methods of Flow-Gauging,
W86-04798 7B

Installation and Operation of a Bubble Gauge Network in the Mahakam River Basin, East Kalimantan, Indonesia,
W86-04800 7B

Haddington Flood Warning System,
W86-04808 7B

Automation of Daily Water Discharge Computation for Rivers with Different Regimes,
W86-04814 7C

Water and Wastewater Time to Automate,
W86-04958 5G

Automation of a Plant Treating Water with Ozone,
W86-05066 5F

Control of a Fully Automated Ozone Application System,
W86-05272 5D

AVAILABLE WATER
Primary Influence Factors on Domestic Water Demand in Europe,
W86-05147 6D

AVIERA
Distribution of Mercury in the Sediments and Fishes of the Lagoons of Aveiro, Portugal,
W86-05366 5B

BACILLUS PHAGES
Bacillus Phages as Tracers of Water Movement,
W86-05367 5B

BACTERIA
Seasonality of Bacterial Quality of Water in a Tropical Developing Country (Sierra Leone),
W86-05106 5A

Regulation of Bacterial Secondary Production in Two Eutrophic Lakes and in Experimental Enclosures,
W86-05186 5C

Influence of Temperature on Bacterial Development in Waters,
W86-05275 5F

Bacterial Profile of Petrochemical Industry Effluents,
W86-05393 5D

BACTERIAL PHYSIOLOGY
Kinetics of Anaerobic Purification of Industrial Wastewater,
W86-04745 5D

BANK EROSION
Analysis of Stratigraphic Control on River Bank Failure,
W86-04748 4D

Migration Patterns of an Asymmetric Meandering River: The Rouge River, Quebec,
W86-05219 2E

BARIUM
Effect of River Water on Phytotoxicity of Ba, Cd and Cr,
W86-05101 5C

BARLEY
Effect of Water Stress upon Polyamine Levels in Barley (Hordeum vulgare L.) Leaves,
W86-04700 2I

BARRA BONITA RESERVOIR
Primary Production and Effects of Enrichment with Nitrate and Phosphate on Phytoplankton in the Barra Bonita Reservoir (State of Sao Paulo, Brazil),
W86-05157 5C

BASINS
Basin-Wide Impacts of Irrigation Efficiency,
W86-05236 3F

BATH COUNTY
Bath County: The World's Largest Pumped-Storage Plant Commissioned,
W86-04996 8C

BAVARIA
Project Appraisal in Water Resource Development in Bavaria,
W86-05306 6B

BEACH EROSION
Results of Recent Research on Erosion Processes in Hungary,
W86-04903 2J

BEANS
Water Relations of Chromium VI Treated Bush Bean Plants (Phaseolus vulgaris) L. cv. Contender) under both Normal and Water Stress Conditions,
W86-04701 5C

BED LOAD
Measurement of Bed Load in Rivers,
W86-04844 2J

Increased Bag Size Improves Helley-Smith Bed Load Sampler for Use in Streams with High Sand and Organic Matter Transport,
W86-04845 2J

Efficiency of Basket Type Bed Load Samplers,
W86-04846 2J

Development of a Sand Bed Load Sampler for the Yangtze River,
W86-04847 2J

Experimental Investigations on the Initiation of Bed Load Transport in Gravel Rivers,
W86-04848 2J

Sediment Sampling in Rivers and Canals,
W86-04860 7B

Measurement of Suspended Sediment and Bed Load in Sand Bed Channels and the Associated Problems,
W86-04873 2J

Significance, Measurement, and Analysis of Sediment Discharges of Flashy Streams,
W86-04874 2J

BENCH TESTING
Bench Testing of On-line Total Residual Chlorine Analyzers,
W86-05069 5A

BENDS
Objective Identification of Meanders and Bends,
W86-05117 2E

BENTHIC FAUNA
Benthic Macrofauna Associated with the Oyster Reefs of the James River Estuary, Virginia, USA,
W86-05166 2L

BENTHOS
Invertebrate Drift in the Biological Monitoring of Water Quality,
W86-04771 5A

Marine Benthos in Relation to Pore Water Chemistry and Sediment Geochemistry of Simulated Dredged Material,
W86-05152 5C

Effects of Hydraulic Dredging to Control Oyster Drills on Benthic Macrofauna of Oyster Grounds in Delaware Bay, New Jersey,
W86-05153 5C

Vertical Migration and Mortality of Marine Benthos in Dredged Material: A Synthesis,
W86-05169 5C

Analysis of the Inshore Macrozoobenthic Community in Lake Naini Tal, UP, India,
W86-05172 2H

BENTONITE
Adsorption of Organic Pollutants on Montmorillonite Treated with Amines,
W86-05022 5F

BENZENSULFONIC ACID
Ozone Absorption with Reaction in Benzenesulfonic Acid Aqueous Solutions,
W86-05284 5F

BERYLLIUM
Geochemistry and Deposition of (7)Be in River-Estuarine and Coastal Waters,
W86-05095 2K

BIDDING PROCESS
Method for Evaluation and Procurement of In-Vessel Composting Systems,
W86-04741 5D

BIDS
China's First World Bank-Assisted Hydro Scheme,
W86-05001 8C

BIOACCUMULATION
Bioaccumulation and Effects on Reproduction in Aquatic Organisms: An Assessment of the Current Literature,
W86-04825 5B

Bioconcentration of Lipophilic Compounds by Some Aquatic Organisms,
W86-05324 5B

Effect of Al and Humic Acids on the 241 Am Adsorption on the Exoskeleton of the Crayfish Astacus Leptodactylus Eschscholtz,
W86-05328 5B

BIOASSAY
Prediction of the Toxicity of Copper to Australian Freshwater Animals,
W86-04777 5C

Effect of Fluorides on Survival and Reproduction of Daphnia Magna,
W86-05024 5C

Bioassay System for Industrial Chemical Effects on the Waste Treatment Process: PCB Interactions,
W86-05312 5D

BIOASSAYS
Application of an Algal Assay to Assess Toxicity and Eutrophication in Polluted Streams,
W86-04780 5C

Bacillus Subtilis/Microsome Rec-Assay for the Detection of Mutagens in Waters of a Municipal Wastewater Treatment Plant,
W86-04782 5A

BIOCHEMICAL OXYGEN DEMAND
Model to predict BOD from COD values,
W86-04951 5A

BIODEGRADATION
Determination of Linear Alkylbenzenesulfonates in Sewage Sludge by High-Resolution Gas Chromatography/Mass Spectrometry,
W86-04721 5A

Biodegradability and GAC Adsorbability of Micropollutants by Preozonation,
W86-05040 5F

NTA Biodegradation and Removal in Subsurface Sandy Soil,
W86-05339 5B

Photochemical and Microbial Degradation of 2,4,5-Trichloroaniline in a Freshwater Lake,
W86-05392 5B

Bacterial Profile of Petrochemical Industry Effluents,
W86-05393 5D

BIOFILM
Biofilm on Reverse Osmosis Membranes,
W86-05123 5D

BIOFILTERS
Effect of Tracer Diffusion in Biofilm on Residence Time Distributions,
W86-05343 5D

BIOGAS
Adsorption, Desorption, and Bioregeneration in an Anaerobic, Granular Activated Carbon Reactor for the Removal of Phenol,
W86-05017 5D

BIOINDICATORS
Metal-Binding Proteins as Metal Pollution Indicators,
W86-04763 5C

Lemna as an Indicator of Water Pollution and the Absorption of Heavy Metals by Lemna,
W86-04779 5A

Chronic Toxicity of 4-Nitrophenol to Daphnia magna Straus Under Static-Renewal and Flow-Through Conditions,
W86-04962 5C

Bacillus Phages as Tracers of Water Movement,
W86-05367 5B

Ecological Impact of an Oil Spill: Utilization of Biological Indicators,
W86-05373 5C

Molecular and Cellular Indices of Pollutant Effects and Their Use in Environmental Impact Assessment,
W86-05375 5A

BIOLOGICAL ANALYSIS
Chemical and Biological Characterization of Black Rock Harbor Dredged Material,
W86-04937 5A

BIOLOGICAL FILTERS
Distribution of Retention Times in Model Biological Filters Containing Packed Spheres,
W86-05329 5D

BIOLOGICAL MAGNIFICATION
Bioaccumulation and Effects on Reproduction in Aquatic Organisms: An Assessment of the Current Literature,
W86-04825 5B

Bioconcentration of Lipophilic Compounds by Some Aquatic Organisms,
W86-05324 5B

BIOLOGICAL MEMBRANES
Effect of Biomass on Oxygen Transfer in RBC Systems,
W86-05134 5D

Effect of Tracer Diffusion in Biofilm on Residence Time Distributions,
W86-05343 5D

BIOLOGICAL MONITORING
Freshwater Biological Monitoring.
W86-04767 5A

Performance of an Invertebrate Colonisation Sampler (S. Auf.U.) in Biological Surveillance of Lowland Rivers,
W86-04769 5A

Biological Surveillance in Welsh Rivers for Water Quality and Conservation Assessment,
W86-04770 5A

Early Warning of Eutrophication in Rivers by Analysis of Periphyton Chlorophyll a,
W86-04772 5A

Aspects of Utilizing Continuous Automatic Fish Biomonitoring Systems for Industrial Effluent Control,
W86-04774 5A

Automated Multispecies Biomonitoring Employing Fish and Aquatic Invertebrates of Various Trophic Levels,
W86-04775 5A

Comparison of Biomonitoring Techniques for Evaluating Effects of Jet Fuel on Bluegill Sunfish (Lepomis macrochirus),
W86-04778 5C

Lemna as an Indicator of Water Pollution and the Absorption of Heavy Metals by Lemna,
W86-04779 5A

Compliance Biomonitoring - Standard Development and Regulation Enforcement Using Biomonitoring Data,
W86-04783 5A

BIOLOGICAL OXYGEN DEMAND
Treatment of a Petrochemical Wastewater in Sequencing Batch Reactor,
W86-04945 5D

BIOLOGICAL SAMPLES
Performance of an Invertebrate Colonisation Sampler (S. Auf.U.) in Biological Surveillance of Lowland Rivers,
W86-04769 5A

BIOLOGICAL WASTEWATER TREATMENT
Biotreated Coal Liquefaction Wastewater: Identification of Organics by Composite RO Membrane Concentration, HPLC, and GC/MS,
W86-04949 5D

Energy Usage of Rotating Biological Contactor Facilities,
W86-05019 5D

Characterization of Aerobic and Facultative Anaerobic Bacteria from the Liquid Phase of an Anaerobic Fixed-Bed Digester Treating a Cheese Whey Substrate,
W86-05199 5D

Methanogenic Digestion Using Mixed Substrate of Acetic, Propionic and Butyric Acids,
W86-05345 5D

BIOMASS
Effect of Biomass on Oxygen Transfer in RBC Systems,
W86-05134 5D

Environmental Effects on Specific Rate of Photosynthesis in Small Fertilized Lakes (Northwest of the USSR),
W86-05155 5C

Epipelic Algal Flora of the River Wye System, Wales, UK. 1. Productivity and Total Biomass Dynamics,
W86-05158 2H

Seasonal Fluctuations in the Biomass and Metabolic Activity of Bacterioplankton and Phytoplankton in a Well-Mixed Estuary: the Ems-Dollard (Wadden Sea),
W86-05181 2L

Biomass and Production Estimates for an Estuarine Meiobenthic Copepod, with an Instantaneous Assessment of Exploitation by Flatfish Predators,
W86-05198 2L

BIOREGENERATION
Adsorption, Desorption, and Bioregeneration in an Anaerobic, Granular Activated Carbon Reactor for the Removal of Phenol,
W86-05017 5D

BIOTIC INTEGRITY
Effects of Chlorine and Ammonia from Wastewater Treatment Facilities on Biotic Integrity,
W86-05067 5C

BIRDS
Mersey Estuary (U.K.) Bird Mortalities - Causes, Consequences and Correctives,
W86-05370 5C

BLUEGILLS
Copper-Binding Proteins in Liver of Bluegills Exposed to Increased Soluble Copper under Field and Laboratory Conditions,
W86-04758 5C

Comparison of Biomonitoring Techniques for Evaluating Effects of Jet Fuel on Bluegill Sunfish (Lepomis macrochirus),
W86-04778 5C

BOATS
Moving Boat Discharge Measurements Using Acoustic Doppler Techniques,
W86-04793 7B

BOGS
Raised Bogs of South-Eastern Labrador, Canada: Classification, Distribution, Vegetation and Recent Dynamics,
W86-04693 2H

BORKUM
Cadmium and Lead Cycling Between Water, Sediment, and Biota in an Artificially Contaminated Mud Flat on Borkum (F.R.G.),
W86-05365 5B

BORON
Photometric Determination of Boron in Ground- and Surface Water (Photometrische Bestimmung von Bor Im Grund- und Oberflachenwasser),
W86-04707 5A

BOTTOM SEDIMENTS
Temporal and Spatial Trends in Metal Loadings to Sediments of the Turkey Lakes, Ontario,
W86-05346 5B

BOUND WATER
Stochastic Analysis of Three-Dimensional Flow in a Bounded Domain,
W86-05215 2F

BOUNDARIES
Quantitative Technique for Estimating the Boundaries of Wetlands from Vegetation Data,
W86-05411 2I

BRACKISH WATER
Photosynthetic Production of a Brackish Water Community of Chara Tomentosa L. and Its Dependence on Environmental Conditions,
W86-05151 2C

BREAKWATERS
Armor Layer Stability of Rubble-Mound Breakwaters,
W86-04988 8B

Seawater Pumped-Storage Scheme Under Study in Japan,
W86-04995 8C

BRIDGE CONSTRUCTION
Heavy Rains Hasten Bridge Replacement,
W86-04683 8A

BRIDGE DESIGN
Heavy Rains Hasten Bridge Replacement,
W86-04683 8A

BRITISH COLUMBIA
Catastrophic Lake Drainage within the Homathko River Basin, British Columbia,
W86-05104 2H

Seasonal Dynamics of Skistodiaptomus pallidus Herrick and Other Zooplankton Populations in Deer Lake, S. W. British Columbia,
W86-05180 2H

BROMIDES
Determination of Bromide in Natural Waters by Flow Injection Analysis,
W86-04990 5A

BROMINATION
Bromination and Gas Chromatographic Determination of Micro Amounts of Acrolein in Rain Water,
W86-04711 5A

BRUNEI DARUSSALAM
Water Resource and Supply Development in Brunei Darussalam,
W86-05078 5F

BUBBLE GAGES
Installation and Operation of a Bubble Gauge Network in the Mahakam River Basin, East Kalimantan, Indonesia,
W86-04800 7B

BUBBLES
Rising Air Float Technique for the Measurement of Stream Discharge,
W86-04799 7B

BULB TURBINES
Tidal Power Engineering in the USSR,
W86-05005 8A

BULKING
Using ATP To Determine The Chlorine Resistance of Filamentous Bacteria Associated With Activated Sludge Bulking,
W86-05310 5D

BUTYRIC ACID
Effect of Nickel on Methane Production and Butyric Acid Utilization in a Downflow Fixed-Film Reactor,
W86-04743 5D

CADMIUM
Occurrence of Cadmium in Crabs (Cancer pagurus) and the Isolation and Properties of Cadmium Metallothionein,
W86-04756 5A

Cadmium-Binding Protein (Metallothionein) in Carp,
W86-04757 5C

Cadmium Accumulation and Protein Binding Patterns in Tissues of the Rainbow Trout, Salmo gairdneri,
W86-04759 5C

Cadmium-Binding Proteins in the Scallop Pecten maximus,
W86-04764 5C

Effect of River Water on Phytotoxicity of Ba, Cd and Cr,
W86-05101 5C

Effects of Natural and Synthetic Surface Active Substances on the Electrochemical Reduction of Cadmium in Natural Waters,
W86-05334 5B

Cadmium and Lead Cycling Between Water, Sediment, and Biota in an Artificially Contaminated Mud Flat on Borkum (F.R.G.),
W86-05365 5B

CAISSONS
Tidal Power Engineering in the USSR,
W86-05005 8A

CALCIUM
Sequential Flow-Injection Determinations of Calcium and Magnesium in Waters,
W86-04989 5A

CALIBRATIONS
Current Meter Calibration - Individual Rating Versus Group Rating,
W86-04788 7B

CALIFORNIA
Jones Fork Small Hydro Scheme,
W86-04727 8C

CANADA
Raised Bogs of South-Eastern Labrador, Canada: Classification, Distribution, Vegetation and Recent Dynamics,
W86-04693 2H

Prairie Marshes in Western Canada, with Specific Reference to the Ecology of Five Emergent Macrophytes,
W86-05351 2H

CANALS
Flow Measurement at Sewage Treatment Plants,
W86-04806 7B

Sediment Sampling in Rivers and Canals,
W86-04860 7B

CANCER
Lack of Association Between Fluoridation of Water and Cancer,
W86-05295 5F

CAPILLARITY
Height and Speed of Capillary Rise of Water in Medium Loam Soils,
W86-04730 2G

CAPILLARY WAVES
Model of Gas Transfer Across Air-Water Interfaces with Capillary Waves,
W86-05099 2H

CARBOFURAN
Distribution of Carbofuran in a Rice-Paddy-Fish Microecosystem,
W86-04966 5B

CARBON
Performance of SBR/Denitrification with a Primary Sludge Carbon Source,
W86-05035 5D

CARBON COMPOUNDS
Some characteristics of the Carbon Compounds Released by Daphnia,
W86-05185 2H

CARBON DIOXIDE
Soil Water Extractor that Minimizes CO2 Degassing and pH Errors,
W86-05246 2G

CARBON RADIOISOTOPES
Compatibility of Carbon Uptake Rates Calculated from Stable and Radioactive Isotope Data: Implications for the Design of Experimental Protocols in Aquatic Primary Productivity,
W86-05174 2H

14C-Labelling Patterns of Phytoplankton: Specific Activity of Different Product Pools,
W86-05176 5A

CARBONATES
Determination of Carbonate Traces in High-Purity Water by Means of Chromatography,
W86-05281 5F

CARBOPACK B
Gas Chromatographic Evaluation of the Organic Components present in the Atmosphere at Trace Levels with the Aid of Carbopack B for Pre-Concentration of the Sample,
W86-04710 5A

CARCINOGENS
Microbial Mutagenicity Testing of Water Samples,
W86-04781 5A

Estimating Risk to Human Health,
W86-04977 5B

CARDINGTON
Rainfall Investigations at Cardington and Winchcombe 1954-67,
W86-05045 2B

CARP
Cadmium-Binding Protein (Metallothionein) in Carp,
W86-04757 5C

CASCADE HYDROELECTRIC SYSTEMS
Small Hydro Cascade Developments in China,
W86-04723 8C

CASE STUDIES
Groundwater Recharge Estimate by Numerical Modeling: A Case Study,
W86-05146 2F

CATCHMENT AREAS
Monitoring Water Quantity and Water Quality in an Urban Basin,
W86-04807 7B

Erosion and Sediment Yield in the Krishna River Basin, India,
W86-04917 2J

Some Observations on Hochstetter's Frog in the Catchment of the Motu River, East Cape,
W86-05197 2H

Monitoring Effects of Catchment Management Practices on Phosphorus Loads into the Eutrophic Peel-Harvey Estuary, Western Australia,
W86-05357 5B

CATCHMENT BASINS
Sediment Dynamics in a Partially Cultivated Catchment in New South Wales, Australia,
W86-05114 2J

Hydrologic Characteristics and Modelling of a Small Forested Catchment in Southeastern New South Wales. Pre-Logging Condition,
W86-05116 2E

CAUSTIC WASTES
Caustic Waste Menaces Jamaica,
W86-04970 5C

CE-QUAL-R1
Confirmation of the Water Quality Model CE-QUAL-R1 Using Data from Eau Galle Reservoir, Wisconsin,
W86-04941 5B

CELLULOSE EXCHANGER
Energy Dispersive XRFA of Solutions Containing FE and Trace Amounts of CO and Other Heavy Metals after Selective Separation on the Cellulose Exchanger Hyphan,
W86-04706 5A

CESIUM
Identification and Quantification of Sediment Sources Using 137-Cs,
W86-04931 2J

CHANNEL FLOW
Measurement of Open Channel Flow by the Electromagnetic Gauge,
W86-04804 7B

Resistance to Flow and Velocity Distribution in Rigid Boundary Channels Carrying Sediment-Laden Flow,
W86-05255 2E

CHANNEL MORPHOLOGY
Morphologic Effects of Channelization: the Case of the Neebing-McIntyre Floodway, Thunder Bay, Ontario, Canada,
W86-05408 8B

Channel Adjustments to the Removal of Log Steps: an Experiment in a Mountain Stream,
W86-05409 4D

CHANNELS
Equations for Estimating Discharge in Steep Channels with Coarse Bed Material,
W86-04791 2E

CHEESE FACTORY WASTE
Effect of Nickel on Methane Production and Butyric Acid Utilization in a Downflow Fixed-Film Reactor,
W86-04743 5D

CHELATES
Gas-Chromatographic Elemental Analysis via Di(Trifluorethyl)Dithiocarbamato Chelates IX. Optimization of the Capillary-Gas-Chromatographic Determination of Trace Metals,
W86-04708 5A

CHEMICAL ANALYSIS
Measurement of the Water-Octanol Partition Coefficient of 2,3,7,8-Tetrachlorodibenzo-P-Dioxin,
W86-04722 5A

Chemical and Biological Characterization of Black Rock Harbor Dredged Material,
W86-04937 5A

Flow-Injection Potentiometric Stripping Analysis - A New Concept for Fast Trace Determinations,
W86-04991 5A

Compound-Specific Determination of Arsenite at Sub-nanogram Concentrations in Freshwater and Seawater,
W86-05107 5A

Role of Suspended Sediment in Irrigation Return Flow Chemistry, Southern Alberta,
W86-05211 5B

Chemical Fractionation of Heavy Metals in Anoxic Estuarine and Coastal Sediments,
W86-05364 5B

Molecular and Cellular Indices of Pollutant Effects and Their Use in Environmental Impact Assessment,
W86-05375 5A

CHEMICAL COMPOSITION
Comparative Limnology of Several Reservoirs in Central India,
W86-05164 5C

Field and Laboratory Studies on Nile Phytoplankton in Egypt. I. Some Physical and Chemical Characteristics,
W86-05173 2H

Thermal and Oxygen Conditions and the Chemical Composition of the Water in the Great Masurian Lakes,
W86-05194 5C

Chemical Forms of Arsenic in Marine Organisms, with Emphasis on Hemifusus Species,
W86-05374 5B

CHEMICAL DIFFUSION
One-Dimensional Model of Chemical Diffusion and Sorption in Saturated Soil and Aquatic Systems,
W86-05390 5B

CHEMICAL EFFECTS
Bioassay System for Industrial Chemical Effects on the Waste Treatment Process: PCB Interactions,
W86-05312 5D

CHEMICAL OXYGEN DEMAND
Model to predict BOD from COD values,
W86-04951 5A

Rapid Determination of Chemical Oxygen Demand in Waste Waters and Effluents by Flow Injection Analysis,
W86-04992 5G

PAC-Activated Sludge Treatment of a Steel Mill Coke-Plant Wastewater,
W86-05137 5D

CHEMICAL PRECIPITATION
Copper (2+), Zinc (2+), and Nickel (2+) Uptake by Activated Sludge,
W86-04755 5D

CHEMICAL PROPERTIES
Some Recent Developments in the Characterization of Estuarine Particulates,
W86-05360 5A

Use of Rain and Dry Deposition Compositions for Interpreting Ground-Water Chemistry,
W86-05394 2K

CHEMICAL REACTIONS
Chemical Reactions within Root Zone of Arid Zone Soils,
W86-05233 5B

CHEMICAL SHORTAGE
Shortage of Water Fluoridation chemicals Developing,
W86-04976 5F

CHEMICAL SLUDGE
Alkylate Sludge Reuse Potential,
W86-05406 5E

CHEMICAL TREATMENT
Ozone Absorption with Reaction in Benzenesulfonic Acid Aqueous Solutions,
W86-05284 5F

CHEMISTRY OF PRECIPITATION
Acid Rain - A Further Look at the Evidence,
W86-04704 5B

CHESAPEAKE BAY
Transition Metal-Binding Proteins from Three Chesapeake Bay Fish Species,
W86-04760 5C

CHINA
Small Hydro Cascade Developments in China,
W86-04723 8C

China's First World Bank-Assisted Hydro Scheme,
W86-05001 8C

Effect of Qinghai-Tibet Plateau Forcing on the Meso-Scale Rain-Bearing Circulation systems over Eastern China during Presummer Rainy Season,
W86-05090 2B

CHLORIDES
Rapid Determination in Water of Chloride, Sulphate, Sulphite, Selenite, Selenate and Arsenate Among Other Inorganic and Organic Solutes by Ion Chromatography With UV Detection Below 195 nm,
W86-05302 5A

CHLORINATED HYDROCARBONS
Photochemical and Microbial Degradation of 2,4,5-Trichloroaniline in a Freshwater Lake,
W86-05392 5B

Evaluation of the Toxic Components of Toxaphene in Lake Michigan Lake Trout,
W86-05400 5A

CHLORINATION
Sludge Odor Control: If At First You Don't Succeed...,
W86-04736 5D

Chemistry, Microbiology, and Modeling of Chlorination for Activated Sludge Bulking Control,
W86-05083 5D

Alternative Aluminium Flocculants Controlling Micropollutants,
W86-05404 5F

CHLORINE
Reactivity of Nitrogenous and Other Organic Compounds with Aqueous Chlorine,
W86-04960 5F

Effects of Chlorine and Ammonia from Wastewater Treatment Facilities on Biotic Integrity,
W86-05067 5C

Chlorine Dioxide Reactivity with Proteins,
W86-05340 5F

CHLORINE DIOXIDE
Controlling Taste and Odor with Chlorine Dioxide,
W86-04733 5F

Chlorine Dioxide Reactivity with Proteins,
W86-05340 5F

Chlorine Dioxide Reactivity with Nucleic Acids,
W86-05341 5F

CHLORINE RESISTANCE
Using ATP To Determine The Chlorine Resistance of Filamentous Bacteria Associated With Activated Sludge Bulking,
W86-05310 5D

CHLOROPHYLL
Thermal and Oxygen Conditions and the Chemical Composition of the Water in the Great Masurian Lakes,
W86-05194 5C

CHLOROPHYLL A
Early Warning of Eutrophication in Rivers by Analysis of Periphyton Chlorophyll a,
W86-04772 5A

In Situ Pulse Light Fluorometer for Chlorophyll Determination as a Monitor for Vertical and Horizontal Phytoplankton Distribution in Lakes,
W86-05175 2H

CHROMATOGRAPHY
Cadmium-Binding Proteins in the Scallop Pecten maximus,
W86-04764 5C

Automated Ion Chromatographic Determination of Anions In Precipitation Samples,
W86-04984 5A

Fused Silica Open Tubular Column Optimized for the Analysis of Volatile Organic Pollutants,
W86-04985 5A

CHROMIUM
Water Relations of Chromium VI Treated Bush Bean Plants (Phaseolus vulgaris) L. cv. Contender) under both Normal and Water Stress Conditions,
W86-04701 5C

Pretreatment by the Metal Finishing Industry,
W86-05012 5D

Effect of River Water on Phytotoxicity of Ba, Cd and Cr,
W86-05101 5C

CHRYSOTILE
Dissolution Kinetics of Chrysotile at pH 7 to 10,
W86-05290 2K

CIVIL LAW
Drinking Water Bill Sails through Congress,
W86-04766 5G

CLAMS
Accumulation and Metabolic Effects of Di-n-Butyltin Dichloride in the Freshwater Clam, Anodonta Anatina,
W86-04965 5C

CLARIFICATION
Flocculator-Clarifier Performance,
W86-05051 5D

CLAY
Turbidity Removal from Clay Suspensions by Use of Organic Polymeric Flocculants,
W86-05260 5D

CLAYS
Adsorption of Organic Pollutants on Montmorillonite Treated with Amines,
W86-05022 5F

Leaching of Herbicides Through Undisturbed Cores of a Structured Clay Soil,
W86-05125 5B

CLIMATE
Updated Climate Feedback Diagram,
W86-05314 2B

CLIMATOLOGY
Climatology of Internal Waves in a Deep Temperate Lake,
W86-05100 2H

CLOGGING
Waste-Water Injection: Geochemical and Biogeochemical Clogging Processes,
W86-05402 5E

CLOUD SEEDING
Observational Rainfall-Runoff Analysis for Estimating Effects of Cloud Seeding on water Resources in Northern Israel,
W86-05115 3B

COAL
Biotreated Coal Liquefaction Wastewater: Identification of Organics by Composite RO Membrane Concentration, HPLC, and GC/MS,
W86-04949 5D

COAL GASIFICATION
Cooling Tower Evaporation of Treated Coal Gasification Wastewaters,
W86-05313 5D

COASTAL PLAINS
Benthic Macroinvertebrate Community Structural and Functional Group Response to Thermal Enhancement in the Savannah River and a Coastal Plain Tributary,
W86-05089 5C

Headwater Stream Losses of Nitrogen from Two Coastal Plain Watersheds,
W86-05398 5B

COASTAL WATERS
Geochemistry and Deposition of (7)Be in River-Estuarine and Coastal Waters,
W86-05095 2K

Development, Testing and Intercalibration of Reference Methods for Pollution Studies in Coastal and Estuarine Waters,
W86-05354 5C

Organic Micropollutants in Dutch Coastal Waters,
W86-05359 5B

Cadmium and Lead Cycling Between Water, Sediment, and Biota in an Artificially Contaminated Mud Flat on Borkum (F.R.G.),
W86-05365 5B

Licensing a Major Industrial Discharge to Coastal Waters: The Practical Application of The EQO/EQS Approach,
W86-05381 5G

COASTAL ZONE MANAGEMENT
Transport and Water Quality Modelling in the Southern North Sea in Relation to Coastal Pollution Research and Control,
W86-05377 5B

COBALT
Energy Dispersive XRFA of Solutions Containing FE and Trace Amounts of CO and Other Heavy Metals after Selective Separation on the Cellulose Exchanger Hyphan,
W86-04706 5A

COCOMBUSTION
Cocombustion of Sludge and Solid Wastes,
W86-04838 5D

COHO SALMON
Effects of Acid Exposure on the Ion Regulation and Seawater Adaptation of Coho Salmon (Oncorhynchus kisutch) Parrs and Smolts,
W86-05061 5C

COLD WEATHER CONSTRUCTION
World's Highest Dam Conquers Harsh Environment,
W86-05002 8D

COLIFORMS
Using the Fecal Coliform Test for Sewer and Storm Drain Maintenance,
W86-04687 5D

Analysis of Groundwater Quality Data Obtained from Private Individual Water Systems in Pennsylvania,
W86-05140 2F

COLOR
Contact Flocculation-Filtration Of Low-Turbidity, Highly Coloured Acid Moorland Water,
W86-05303 5F

COLORADO RIVER
Glen Canyon Dam's Quick Fix,
W86-04957 8A

COLORADO SPRINGS
Sludge Management Goes the Distance,
W86-05121 5E

COMBINED SEWER OVERFLOWS
State-Of-The-Art Update on Combined Sewer Overflow Control,
W86-05038 5D

COMBUSTION
Environmental Aspects of the Combustion of Sewage Sludge in a Utility Boiler,
W86-04948 5E

COMMUNICATIONS
River Dee Scheme and Intake Protection Systems,
W86-04752 5F

COMPARISON STUDIES
Municipal Sludge Composting Technology Evaluation,
W86-05131 5E

COMPOST
Evaluation of Nitrogen Availability Indexes for a Sludge Compost Amended Soil,
W86-05386 5E

COMPOSTING
Denver's Dual Utilization Sludge Program,
W86-04717 5E

Sludge Management Alternatives for San Diego,
W86-04718 5E

Method for Evaluation and Procurement of In-Vessel Composting Systems,
W86-04741 5D

Evaluating Maturity and Metal Transfer of MSW Compost,
W86-04972 5E

Omaha Moves From 'Dispose All' To Management,
W86-04974 5E

Monitoring and Evaluating Composting Process Performance,
W86-05130 5E

Municipal Sludge Composting Technology Evaluation,
W86-05131 5E

Land Application of Domestic Wastewater, Wood Production, and Sludge Composting: an Integrated Design,
W86-05293 3C

COMPUTER MODELS
Method For Using Computerized Customer Information in Water Distribution Network Models,
W86-04749 7B

Data Requirements for Sediment, Erosion and Transport Simulation,
W86-04876 7A

COMPUTER PROGRAMS
Lift Station Design,
W86-04959 8A

COMPUTERS
Hydrometric Data Capture Using Intelligent Solid State Logging Systems,
W86-04805 7B

Automation of Daily Water Discharge Computation for Rivers with Different Regimes,
W86-04814 7C

Selecting Effective Software for Water and Wastewater Treatment Facilities,
W86-05319 5D

Behavioral Assay for Assessing Effects of Pollutants on Fish Chemoreception,
W86-05325 5C

CONCRETE
Large Concrete Dam Construction in the USSR,
W86-05004 8A

CONCRETES
Zonation in Periphyton Colonizing Concrete Blocks on the Shore of Lake Zegrzynskie,
W86-05193 2H

CONDUCTIVITY
Tracking Salty Soil, Saving Fresh Water,
W86-04982 3C

CONIDIAL FUNGI
Conidial Fungi from Fresh-Water Foam,
W86-05396 2I

CONIFEROUS FORESTS
Seasonal and Diurnal Variation of Energy Budget Components in Coniferous Forests,
W86-05296 2D

CONSISTENCY INDICES
Some Laboratory Techniques of Investigating Land Erosion,
W86-04885 2J

CONSTRUCTION
Implementing the Taliha Mini Hydro Scheme in Zaire,
W86-04726 8A

Bath County: The World's Largest Pumped-Storage Plant Commissioned,
W86-04996 8C

CONSTRUCTION METHODS
Ecological Impacts of the Construction of Dams in an Estuary,
W86-05371 6G

CONTINENTAL SHELF
Trace Metals In Marine Surface Sediments Of The Palos Verdes Shelf, 1974 TO 1980,
W86-05307 5B

CONTINUOUS-FLOW REACTORS
Inhibition Kinetics of Nitrification in Continuous-Flow Reactors,
W86-05052 5D

CONTRACTION
Hydraulics of Two Flowing Layers with Different Densities,
W86-04714 2E

CONTRACTS
China's First World Bank-Assisted Hydro Scheme,
W86-05001 8C

COOLING TOWER
Cooling Tower Evaporation of Treated Coal Gasification Wastewaters,
W86-05313 5D

COPEPODS
Food Size Spectra and Species Replacement within Herbivorous Zooplankton,
W86-05168 2H

Life Cycle and the Zones of Occurrence of Mesocyclops leuckarti Claus (Cyclopoida, Copepoda),
W86-05192 2H

Biomass and Production Estimates for an Estuarine Meiobenthic Copepod, with an Instantaneous Assessment of Exploitation by Flatfish Predators,
W86-05198 2L

COPPER
Copper-Binding Proteins in Liver of Bluegills Exposed to Increased Soluble Copper under Field and Laboratory Conditions,
W86-04758 5C

Hg- and Cu-Induced Hepatocellular Changes in the Mummichog, Fundulus Heteroclitus,
W86-04762 5C

Influence of Copper in Various Forms on Natural Phytoplanktonic Populations from the Saguenay River, Quebec, Canada. (Influence de la Speciation du Cuivre sur les Populations Phytoplanctoniques Naturelles de la Riviere du Saguenay, Quebec, Canada.),
W86-05162 5C

CORE SAMPLES
Temporal and Spatial Trends in Metal Loadings to Sediments of the Turkey Lakes, Ontario,
W86-05346 5B

CORN
Availability of Applied Heavy Metals as a Function of Type of Soil Material and Metal Source,
W86-05299 5E

CORRELATION ANALYSIS
Effect of Serial Correlation on Reservoir Size,
W86-05253 2H

CORROSION
Odor and Corrosion Control in Sanitary Sewerage Systems and Treatment Plants,
W86-04821 5D

CORROSION CONTROL
Odor and Corrosion Control in Sanitary Sewerage Systems and Treatment Plants,
W86-04821 5D

CORTES DAM
Construction of Spain's Cortes-La Muela Scheme,
W86-05000 8C

COST ANALYSIS
Standard Design for Six Mini Hydro Sites in Indonesia,
W86-04725 8C

Sludge Odor Control: If At First You Don't Succeed...,
W86-04736 5D

Salvaging a Water Reservoir,
W86-04739 8A

Current Meter Calibration - Individual Rating Versus Group Rating,
W86-04788 7B

Drinking Water Cost Equations,
W86-04942 5F

Opportunities for Improving the Cost-Effectiveness of Acid Rain Control Strategies,
W86-04946 5G

Feasibility of Constructing a Waste-to-Energy Incinerator to Generate Electricity for a Colocated Wastewater Treatment Plant,
W86-05129 5E

Economic Appraisal of Active and Passive Methods of Leakage Control,
W86-05317 6C

Output and Investment Frontiers of United States Irrigated Agriculture,
W86-05326 6C

COTTON PLANTS
Permethrin Washoff from Cotton Plants by Simulated Rainfall,
W86-05385 5B

COX REGRESSION MODEL
Flood Frequency Analysis Using the Cox Regression Model,
W86-05248 2E

CRABS
Occurrence of Cadmium in Crabs (Cancer pagurus) and the Isolation and Properties of Cadmium Metallothionein,
W86-04756 5A

NMR Studies of Crab and Plaice Metallothioneins,
W86-04761 5C

CRASSULACEAN ACID METABOLISM
Studies of Diurnal Acid Fluctuations in British Isoetid-type Submerged Aquatic Macrophytes,
W86-05064 5C

CRAYFISH
Effect of Al and Humic Acids on the 241 Am Adsorption on the Exoskeleton of the Crayfish Astacus Leptodactylus Eschscholtz,
W86-05328 5B

CRITICAL FLOW
Hydraulics of Two Flowing Layers with Different Densities,
W86-04714 2E

CROP PRODUCTION
Simulated Crop-Water Production Functions for Several Crops When Irrigated with Saline Waters,
W86-04690 3C

Optimal Ratios of Saline and Nonsaline Irrigation Waters for Crop Production,
W86-05126 3C

CROPLAND
Feedlot Manure Use on Desert Cropland,
W86-04973 5E

Effects of Acid Deposition on Crops and Forests,
W86-05415 5B

CROSS FLOW MEDIA
Evaluation of High Density Cross Flow Media for Rehabilitating an Existing Trickling Filter,
W86-05031 5D

CRUSTACEANS
Clearance Rates of Crustacean Macrofiltrators: The Nature of in situ Rate Depressions in a Fertilized Oligotrophic Lake in the Kuokkel Area, Northern Sweden,
W86-05154 5C

Bioconcentration of Lipophilic Compounds by Some Aquatic Organisms,
W86-05324 5B

CRYSTALLINE ROCKS
Measurement of Important Parameters Determining Aqueous Phase Diffusion Rates through Crystalline Rock Matrices,
W86-05297 5B

CULTIVATED LANDS
Hydrodynamic Model of Sediment Transport in Rill Flows,
W86-04926 4D

Identification and Quantification of Sediment Sources Using 137-Cs,
W86-04931 2J

CULTURING TECHNIQUES
Method for Enumerating Protozoa in a Variety of Freshwater Habitats,
W86-05201 5A

CURCUMIN
Photometric Determination of Boron in Ground- and Surface Water (Photometrische Bestimmung von Bor Im Grund- und Oberflachenwasser),
W86-04707 5A

CURRENT METERS
Experiences Gained During the Hydraulic Investigations on the Cooling Water System of a Thermal Power Station,
W86-04803 8C

CYANIDE
Investigations into the Causes of Fish Kills Occurring in the River Meuse (1979-1983),
W86-04773 5C

PAC-Activated Sludge Treatment of a Steel Mill Coke-Plant Wastewater,
W86-05137 5D

Neutralization of Wastewaters Containing Cyanides; Part II: Elimination by Chemical Oxidation in Solution,
W86-05289 5D

CYANIDES
Pretreatment by the Metal Finishing Industry,
W86-05012 5D

CYCLING
Cadmium and Lead Cycling Between Water, Sediment, and Biota in an Artificially Contaminated Mud Flat on Borkum (F.R.G.),
W86-05365 5B

CYCLONIC GYRE
Diagnostic Study on the Vertical Circulation and the Maintenance Mechanisms of the Cyclonic Gyre in Lake Biwa,
W86-05094 2H

CZECHOSLOVAKIA
Construction of Czechoslovakia's Dlouhe Strane Project,
W86-04998 8C

DAM CONSTRUCTION
Evaluation of Electrical Resistivity Methods in the Investigation of Karstic Features, El Cajon Dam Site, Honduras,
W86-04747 8E

World's Highest Dam Conquers Harsh Environment,
W86-05002 8D

Techniques for Soviet Pumped-Storage Plant Construction,
W86-05003 8C

Large Concrete Dam Construction in the USSR,
W86-05004 8A

DAMS
Analysis of Sediment Yield and Transport Data for Erosion Control Works,
W86-04915 4D

Control of Spillway Gates During Floods,
W86-04993 8A

Synopsis of Analytic Solutions for the Temperature Distribution in a River Downstream from a Dam or Reservoir,
W86-05258 5B

Ecological Impacts of the Construction of Dams in an Estuary,
W86-05371 6G

DAMSITES
Evaluation of Electrical Resistivity Methods in the Investigation of Karstic Features, El Cajon Dam Site, Honduras,
W86-04747 8E

DAPHNIA
Chronic Toxicity of 4-Nitrophenol to Daphnia magna Straus Under Static-Renewal and Flow-Through Conditions,
W86-04962 5C

Ozonization of Humic Acids. Medium Term Toxicity Towards Daphnia Magna,
W86-05041 5C

Significance and Degree of Abioseston Consumption in the Filter-Feeder Daphnia galeata SARS am. RICHARD (Cladocera) in Lake Balaton,
W86-05085 5B

Seasonal Dynamics of Skistodiaptomus pallidus Herrick and Other Zooplankton Populations in Deer Lake, S. W. British Columbia,
W86-05180 2H

Some characteristics of the Carbon Compounds Released by Daphnia,
W86-05185 2H

Influence of Water on Reproductive Success and Chemical Composition of Laboratory Reared Populations of Daphnia Magna,
W86-05337 5C

DAPHNIA MAGNA
Effect of Fluorides on Survival and Reproduction of Daphnia Magna,
W86-05024 5C

DATA COLLECTIONS
Database Management,
W86-05010 7C

District Metering,
W86-05316 7B

DATABASE MANAGEMENT
Database Management,
W86-05010 7C

DDT
Impairment of Thyroid Activity in Sarotherodon Mossambicus Due to DDT Treatment,
W86-05267 5B

DEER LAKE
Seasonal Dynamics of Skistodiaptomus pallidus Herrick and Other Zooplankton Populations in Deer Lake, S. W. British Columbia,
W86-05180 2H

DELAWARE BAY
Effects of Hydraulic Dredging to Control Oyster Drills on Benthic Macrofauna of Oyster Grounds in Delaware Bay, New Jersey,
W86-05153 5C

DELTAIC PLAIN
Nitrogen Cycling in a Freshwater Marsh of Panicum Hemitomon on the Deltaic Plain of the Mississippi River,
W86-04698 2H

DELTAS
Morphology of a Delta Prograding by Bulk Sediment Transport,
W86-04702 2J

Analysis of a 24-Hour Cycle of Zooplankton Sampling in a Lagoon of the Po River Delta,
W86-05179 2L

DENITRIFICATION
Denitrification in a Limestone Aquifer in Relation to the Security of Low-Nitrate Groundwater Supplies,
W86-04751 5B

Performance of SBR/Denitrification with a Primary Sludge Carbon Source,
W86-05035 5D

Kinetics and Stoichiometry of SBR/Denitrification with a Primary Sludge Carbon Source,
W86-05036 5D

Role of Aquatic Plants in Wastewater Treatment by Artificial Wetlands,
W86-05342 5D

Headwater Stream Losses of Nitrogen from Two Coastal Plain Watersheds,
W86-05398 5B

DENSITY CURRENTS
Hydraulics of Two Flowing Layers with Different Densities,
W86-04714 2E

DENTRIFICATION
In-Situ Study of the Occurrence and Rate of Denitrification in a Shallow Unconfined Sand Aquifer,
W86-05112 5B

DENUDATION
Timescales of Denudation: The Lake-Drainage Basin Approach,
W86-04930 4D

DENVER
Denver's Dual Utilization Sludge Program,
W86-04717 5E

DEPOSITION
Use of Laminated Lake Sediments in the Estimation and Calibration of Erosion Rates,
W86-04933 2H

Phosphorus Deposition from the Epilimnion of Onondaga Lake,
W86-05280 2H

DESALINATION
Reverse Osmosis Modules for Water Desalination,
W86-05259 3A

DESERTS
Predictions of Soil-Water Potentials in the North-Western Sonoran Desert,
W86-04695 2G

Feedlot Manure Use on Desert Cropland,
W86-04973 5E

DESIGN PROCEDURES
Design of Trickling Filter Nitrification Towers,
W86-05021 5D

DESIGN STANDARDS
Design Model for the Overland Flow Process,
W86-05034 5D

Principles of Ozone Oxidation and Disinfection Design,
W86-05271 5D

DESIGN STANDARIZATION
Standard Design for Six Mini Hydro Sites in Indonesia,
W86-04725 8C

DESORPTION
Adsorption, Desorption, and Bioregeneration in an Anaerobic, Granular Activated Carbon Reactor for the Removal of Phenol,
W86-05017 5D

DETENTION RESERVOIRS
Ingenuity Solves the City's Drainage and Recreational Space Needs,
W86-04737 4A

Detention Ponds: The Positive and the Negative,
W86-04738 4A

DETERGENTS
Detergent Phosphate Bans and Eutrophication,
W86-04719 5G

Anaerobic Biodegradation of a Recalcitrant Detergent Wastewater,
W86-04952 5D

NTA Biodegradation and Removal in Subsurface Sandy Soil,
W86-05339 5B

DETRITUS
Detritus in the Littoral of Several Masurian Lakes (Sources and Fates),
W86-05189 5B

DEVELOPING COUNTRIES
Developments in Hydrometry in Central America and Brazil,
W86-04813 7B

Water Resource and Supply Development in Brunei Darussalam,
W86-05078 5F

'UASB' Process for Domestic Wastewater Treatment in Developing Countries,
W86-05305 5D

DEWATERING
Filtrate and cake quality in sludge dewatering,
W86-04954 5E

Water Content and Electric Potential Distributions in Gelatinous Bentonite Sludge with Electroosmotic Dewatering,
W86-05261 5D

DI (TRIFLUORETHYL) DITHIOCARBAMATO-CHELATES
Gas-Chromatographic Elemental Analysis via Di(Trifluorethyl)Dithiocarbamato Chelates IX. Optimization of the Capillary-Gas-Chromatographic Determination of Trace Metals,
W86-04708 5A

DIATOMS
Monitoring Sebago Lake Water Quality Below the Thermocline,
W86-05027 5F

DICAMBA
Determination of Dicamba and 2,4-D in Water and Soil by Isotope Dilution GC/MS,
W86-04692 5A

DIFFUSION RATES
Measurement of Important Parameters Determining Aqueous Phase Diffusion Rates through Crystalline Rock Matrices,
W86-05297 5B

DIGESTED SLUDGE
Potassium Losses in Runoff and Drainage Waters from Cropped, Large-scale Lysimeters,
W86-05388 5B

DIOXIN
Measurement of the Water-Octanol Partition Coefficient of 2,3,7,8-Tetrachlorodibenzo-P-Dioxin,
W86-04722 5A

DIQUAT
Removal of Paraquat, Diquat, and Amitrole from Aqueous Solution by Chemically Modified Peat,
W86-05383 5G

DIRECT AQUEOUS INJECTIONS
Comparison of Direct Headspace and Aqueous Injection Techniques for Halogenated Hydrocarbons in Water,
W86-04712 5A

DISCHARGE HYDROGRAPHS
Method for Uniformizing the Stage-Discharge Relations of Stable River Beds and Its Application,
W86-04790 7B

DISCHARGE MEASUREMENT
Advances in Hydrometry.
W86-04785 7B

Hydrometric Cableways in the Yangtze Valley,
W86-04786 7B

Up-Dating of Discharge Rating Curves by Means of Mathematical Models,
W86-04789 7B

Method for Uniformizing the Stage-Discharge Relations of Stable River Beds and Its Application,
W86-04790 7B

Equations for Estimating Discharge in Steep Channels with Coarse Bed Material,
W86-04791 2E

Developments in Hydrometry in India,
W86-04794 7B

Design and Study of the Instrumentation Required for the Measurement of Discharge by the Moving Boat Method,
W86-04795 7B

Improvement of Ultrasonic Flowmeter in Rivers in Japan,
W86-04802 7B

Automation of Daily Water Discharge Computation for Rivers with Different Regimes,
W86-04814 7C

DISINFECTION
Wastewater Disinfection--Time for a Change,
W86-05046 5D

Study of Operational Ultraviolet Disinfection Equipment at Secondary Treatment Plants,
W86-05047 5D

Disinfection for Potable Reuse,
W86-05048 5F

Disinfection of Low Quality Wastewaters by Ultraviolet Light Irradiation,
W86-05049 5D

Reliable Ozone Disinfection using Off-gas Control,
W86-05068 5D

Principles of Ozone Oxidation and Disinfection Design,
W86-05271 5D

Chlorine Dioxide Reactivity with Proteins,
W86-05340 5F

Chlorine Dioxide Reactivity with Nucleic Acids,
W86-05341 5F

DISJUNCTIVE KRIGING
Disjunctive Kriging: 1. Overview of Estimation and Conditional Probability,
W86-05207 6A

Disjunctive Kriging: 2. Examples,
W86-05208 6A

DISPERSANTS
Alternative Aluminium Flocculants Controlling Micropollutants,
W86-05404 5F

DISPERSION
Second-Order Approach for the Modeling of Dispersive Transport in Porous Media: 1. Theoretical Development,
W86-05205 5B

Second-Order Approach for the Modeling of Dispersive Transport in Porous Media: 2. Application to Solute Motion in Pipes and Capillary Tubes,
W86-05206 5B

Dispersion in Fractal Fracture Networks,
W86-05230 5B

DISPERSIVITY
Velocity Effects on Dispersion in Porous Media with a Single Heterogeneity,
W86-05252 5B

DISSOLUTION FEATURES
Evaluation of Electrical Resistivity Methods in the Investigation of Karstic Features, El Cajon Dam Site, Honduras,
W86-04747 8E

DISSOLVED ORGANIC CARBON
Singlet Oxygen in Surface Waters. 3. Photochemical Formation and Steady-State Concentrations in Various Types of Waters,
W86-04720 2K

DISSOLVED OXYGEN
Evaluation of Factors Affecting the Oxygen Transfer from High-Speed Floating Surface Aerators,
W86-05133 5D

Feedforward Control of a Wastewater Plant,
W86-05335 5D

DISSOLVED OXYGEN CONCENTRATION *PEAK LAG METHOD
Reaeration Rate Estimation Using the Lag in Dissolved Oxygen Concentration,
W86-05060 2E

DIURNAL VARIATION
Seasonal and Diurnal Variation of Energy Budget Components in Coniferous Forests,
W86-05296 2D

DLOUHE STRANE
Construction of Czechoslovakia's Dlouhe Strane Project,
W86-04998 8C

DOMESTIC WASTEWATER
'UASB' Process for Domestic Wastewater Treatment in Developing Countries,
W86-05305 5D

DOMESTIC WATER
Primary Influence Factors on Domestic Water Demand in Europe,
W86-05147 6D

DOUBLE-ACTION GENERATION
Tidal Power Engineering in the USSR,
W86-05005 8A

DOWNFLOW ANAEROBIC FIXED BED REACTOR
Influence of Different Substrate pH Values on the Performance of a Downflow Anaerobic Fixed Bed Reactor Treating a Petrochemical Effluent,
W86-04744 5D

DOWNFLOW FIXED-FILM REACTOR
Effect of Nickel on Methane Production and Butyric Acid Utilization in a Downflow Fixed-Film Reactor,
W86-04743 5D

DRAINAGE
Submersible Propeller Pump as an Alternative to the Tubular Axial Flow Pump,
W86-04986 8C

Catastrophic Lake Drainage within the Homathko River Basin, British Columbia,
W86-05104 2H

Drainage from a Uniform Soil Layer on a Hillslope,
W86-05209 2E

DRAINAGE AREA
Estimation of Erosion and Sediment Yield by Volume Measurements on a Lacustrine River Delta,
W86-04914 2J

Sediment Availability and the Prediction of Storm-Period Sediment Yields,
W86-04928 4D

Use of Laminated Lake Sediments in the Estimation and Calibration of Erosion Rates,
W86-04933 2H

Particle Size Characteristics of Fluvial Suspended Sediment,
W86-04934 5B

DRAINAGE PATTERNS
Development of Drainage Networks,
W86-04921 4D

Differential Bare Field Drainage Properties from Airborne Microwave Observations,
W86-05245 2G

DRAINAGE PROGRAMS
Drainage Required to Manage Salinity,
W86-05232 3F

DRAINAGE WATER
Potassium Losses in Runoff and Drainage Waters from Cropped, Large-scale Lysimeters,
W86-05388 5B

DREDGING
Chemical and Biological Characterization of Black Rock Harbor Dredged Material,
W86-04937 5A

Marine Benthos in Relation to Pore Water Chemistry and Sediment Geochemistry of Simulated Dredged Material,
W86-05152 5C

Effects of Hydraulic Dredging to Control Oyster Drills on Benthic Macrofauna of Oyster Grounds in Delaware Bay, New Jersey,
W86-05153 5C

DRILLING FLUIDS
Distribution of Heavy Metals in Waste Drilling Fluids Under Conditions of Changing pH,
W86-05384 5B

DRINKING WATER
Drinking Water Cost Equations,
W86-04942 5F

Estimating Risk to Human Health,
W86-04977 5B

Viruses in Drinking Water,
W86-04978 5F

Contamination of Firn Layers by Radioactive Fission Products from Atmospheric Fallout,
W86-05141 5B

Health Effects and Risks from Rn222 in Drinking Water,
W86-05143 5C

Rainwater for Drinking in Sri Lanka,
W86-05145 3B

Relation Between Drinking Water Nitrate and Total Nitrate Intake,
W86-05149 5G

Treatment, Waste Management and Cost for Removal of Radioactivity from Drinking Water,
W86-05282 5F

Methyl Bromide in Surface Drinking Waters,
W86-05331 5A

Determination of the Percentage Adsorption of Unknown Organic Compounds from Water with a Multi-Column Technique,
W86-05332 5A

DRINKING WATER STANDARDS
Drinking Water Bill Sails through Congress,
W86-04766 5G

DROP EROSION
Study of the Dynamics of Drop Erosion Under Laboratory Conditions,
W86-04879 2J

DROUGHT
Approach for Frequency Analysis of Multiyear Drought Durations,
W86-05212 2A

DUCKWEED
Effect of River Water on Phytotoxicity of Ba, Cd and Cr,
W86-05101 5C

DYE RELEASES
Tracer Measurements in Lowland Rivers,
W86-04797 7B

Effect of Tracer Diffusion in Biofilm on Residence Time Distributions,
W86-05343 5D

DYES
Effect of Tracer Diffusion in Biofilm on Residence Time Distributions,
W86-05343 5D

DYNAMIC MODELING
State Estimation of a Scalar Dynamic Precipitation Model from Time-Aggregate Observations,
W86-05220 2B

EARTH DAMS
World's Highest Dam Conquers Harsh Environment,
W86-05002 8D

EARTH-WATER INTERFACES
Effects of Water Interactions on Engineering Structures,
W86-05276 8B

EARTHQUAKE ENGINEERING
World's Highest Dam Conquers Harsh Environment,
W86-05002 8D

EASTMAIN RIVER
Salinity Intrusion in the Eastmain River Estuary Following a Major Reduction of Freshwater Input,
W86-05096 2L

ECOLOGICAL EFFECTS
Biological Effects and Pollution Assessment,
W86-05368 5C

Mercury Contamination in Components of an Estuarine Ecosystem,
W86-05369 5C

Ecological Impacts of the Construction of Dams in an Estuary,
W86-05371 6G

Ecological Impact of an Oil Spill: Utilization of Biological Indicators,
W86-05373 5C

Ecologically Derived Guidelines for Managing Two New Zealand Lakes,
W86-05399 6E

ECOLOGICAL IMPACT
Tidal Power Engineering in the USSR,
W86-05005 8A

ECOLOGY
Aspects of the Feeding Ecology of Turbin Water Zooplankton. In situ Studies of Community Filtration Rates in Silt-Laden Lake le Roux, Orange River, South Africa,
W86-05183 2H

ECONOMIC ASPECTS
Estimating Sludge Management Costs.
W86-04829 5D

Output and Investment Frontiers of United States Irrigated Agriculture,
W86-05326 6C

ECONOMIC EVALUATION
Drinking Water Cost Equations,
W86-04942 5F

ECONOMIC FEASIBILITY
Economic Limits of Small and Low-Head Hydro,
W86-04724 6B

ECONOMIC GROWTH
Water is the Key to Municipal Growth,
W86-04734 6D

ECOSYSTEMS
Succession of Communities in the Goczalkowice Dam Reservoir in the Period 1955-1982,
W86-05084 2H

Measure of Plankton Community Similarity Utilizing Variable Weighting of Total Density and Taxonomic Proportionality,
W86-05160 2H

EFFLUENT
Impact of Pulp and Paper Mill Effluent on Egg Hatchability of Pike (Esox lucius L.),
W86-04963 5C

EFFLUENT LIMITATIONS
Definition of Effluent Discharge Consent Conditions in Complex Estuarine Environments,
W86-05379 5G

EFFLUENTS
Aspects of Utilizing Continuous Automatic Fish Biomonitoring Systems for Industrial Effluent Control,
W86-04774 5A

Submersible Propeller Pump as an Alternative to the Tubular Axial Flow Pump,
W86-04986 8C

Rapid Determination of Chemical Oxygen Demand in Waste Waters and Effluents by Flow Injection Analysis,
W86-04992 5G

EL CAJON DAM
Evaluation of Electrical Resistivity Methods in the Investigation of Karstic Features, El Cajon Dam Site, Honduras,
W86-04747 8E

EL NARANJERO DAM
Construction of Spain's Cortes-La Muela Scheme,
W86-05000 8C

ELECTRIC EQUIPMENT
Hydro Plant Frequency Regulation,
W86-05009 8C

ELECTRIC POWER COSTS
Feasibility of Constructing a Waste-to-Energy Incinerator to Generate Electricity for a Colocated Wastewater Treatment Plant,
W86-05129 5E

ELECTRIC POWER DEMAND
Small Hydro Cascade Developments in China,
W86-04723 8C

Energy Usage of Rotating Biological Contactor Facilities,
W86-05019 5D

ELECTRIC POWER PLANTS
Innovative Design Overcomes Multiple Institutional Barriers at Hydro Plant,
W86-04682 8C

ELECTRICAL POTENTIAL DISTRIBUTIONS
Water Content and Electric Potential Distributions in Gelatinous Bentonite Sludge with Electoosmotic Dewatering,
W86-05261 5D

ELECTRICAL RESISTIVITY
Evaluation of Electrical Resistivity Methods in the Investigation of Karstic Features, El Cajon Dam Site, Honduras,
W86-04747 8E

ELECTROCHEMISTRY
Effects of Natural and Synthetic Surface Active Substances on the Electrochemical Reduction of Cadmium in Natural Waters,
W86-05334 5B

ELECTRODIALYSIS
Electrochemical Treatment of Industrial Wastewater,
W86-05403 5D

ELECTROLYSIS
Electrochemical Treatment of Industrial Wastewater,
W86-05403 5D

ELECTROMAGNETIC WAVES
Measurement of Open Channel Flow by the Electromagnetic Gauge,
W86-04804 7B

ELECTRON MICROSCOPY
Unusual Microorganisms Observed in New Zealand Hot Springs,
W86-05200 5A

ELECTRONIC EQUIPMENT
Tracking Salty Soil, Saving Fresh Water,
W86-04982 3C

ELECTROOSMOSIS
Water Content and Electric Potential Distributions in Gelatinous Bentonite Sludge with Electoosmotic Dewatering,
W86-05261 5D

ELECTROPLATING
Electroplating Industry.
W86-04823 5D

ELECTROSTATIC PRECIPITATORS
Operation and Maintenance Manual for Electrostatic Precipitators,
W86-04833 5D

EMS-DOLLARD ESTUARY
Seasonal Fluctuations in the Biomass and Metabolic Activity of Bacterioplankton and Phytoplankton in a Well-Mixed Estuary: the Ems-Dollard (Wadden Sea),
W86-05181 2L

ENDOSULPHAN
Effects of Endosulphan on the Hypothalamo Hypophysial Complex and Fish Reproductive Physiology,
W86-05266 5C

ENERGETICS
Recent Developments in Hydrogen Management During Anaerobic Biological Wastewater Treatment,
W86-04746 5D

ENERGY BUDGET
Seasonal and Diurnal Variation of Energy Budget Components in Coniferous Forests,
W86-05296 2D

ENERGY CONSERVATION
Power from Mine Cooling Water,
W86-04703 8C

Energy Usage of Rotating Biological Contactor Facilities,
W86-05019 5D

ENERGY-DISPERSIVE X-RAY FLUORESCENCE ANALYSIS
Energy Dispersive XRFA of Solutions Containing FE and Trace Amounts of CO and Other Heavy Metals after Selective Separation on the Cellulose Exchanger Hyphan,
W86-04706 5A

ENERGY RECOVERY
Small Asynchronous Hydrogenerators and their Contribution to Energy Recovery in the Water Industry,
W86-05077 8C

ENERGY TRANSFER
Simulation of Fluid Flow and Energy Transport Processes Associated with High-Level Radioactive Waste Disposal in Unsaturated Alluvium,
W86-05223 5E

ENERGY USE
Energy Usage of Rotating Biological Contactor Facilities,
W86-05019 5D

ENFORCEMENT
Controlling Toxicity: An Integrated Strategy,
W86-05013 5G

ENGLAND
Method For Using Computerized Customer Information in Water Distribution Network Models,
W86-04749 7B

Derivation and Application of Environmental Quality Objectives and Standards to Discharges to the Humber Estuary (U.K.),
W86-05380 5G

ENTERIC BACTERIA
Enteric Luminous Microflora of the Pond-Cultured Milk Fish Chanos chanos (Forskal),
W86-05204 2H

ENTRAINMENT
Entrainment Descriptions for Mathematical Modeling of Pumped-Storage Inflows in Reservoirs,
W86-04940 8B

ENVIRONMENT
Methods to Estimate Aquatic Habitat Variables.
W86-04822 5G

ENVIRONMENTAL ASSESSMENT
Biological Effects and Pollution Assessment,
W86-05368 5C

Molecular and Cellular Indices of Pollutant Effects and Their Use in Environmental Impact Assessment,
W86-05375 5A

ENVIRONMENTAL EFFECTS
Sediment Transport Sampling for Environmental Data Collection,
W86-04859 7B

Impact of Tributyl Tin (TBT) Antifouling Paints on Molluscan Fisheries,
W86-05372 5C

ENVIRONMENTAL IMPACT
Impact of the Ixtoc-1 Oil Spill on Zooplankton,
W86-05187 5C

ENVIRONMENTAL INPUT STATEMENT
Significance of Environmental Impacts: an Explorarion of the Concept,
W86-05410 6G

ENVIRONMENTAL POLICY
Toxicity Testing with Freshwater Macroinvertebrates: Methods and Application in Environmental Management,
W86-04776 5A

Derivation and Application of Environmental Quality Objectives and Standards to Discharges to the Humber Estuary (U.K.),
W86-05380 5G

ENVIRONMENTAL PROTECTION
Organic Micropollutants and the Protection of Water Supplies,
W86-05405 5B

ENVIRONMENTAL PROTECTION AGENCY
Tight Money Hampers Cleveland Sewer Jobs,
W86-04754 6C

Controlling Toxicity: An Integrated Strategy,
W86-05013 5G

ENVIRONMENTAL QUALITY
Derivation and Application of Environmental Quality Objectives and Standards to Discharges to the Humber Estuary (U.K.),
W86-05380 5G

Licensing a Major Industrial Discharge to Coastal Waters: The Practical Application of The EQO/EQS Approach,
W86-05381 5G

ENZYME ACTIVITY
Fluorescence Correction for Measurements of Enzyme Activity in Natural Waters Using Methylumbelliferyl-substrates,
W86-05087 2K

EPILIMNION
Phosphorus Deposition from the Epilimnion of Onondaga Lake,
W86-05280 2H

EPIPHYTIC BACTERIA
Distribution of Epiphytic Bacteria on Freshwater Plants,
W86-04696 2H

EQUILIBRIUM
Leaching Tests of Heavy Metals Stabilized with Portland Cement,
W86-05054 5E

EROSION
Erosion and Sediment Transport Measurement: Symposium.
W86-04843 2J

Accuracy of Estimating Basin Denudation Processes from Suspended Sediment Measurements,
W86-04864 2J

Techniques Applied in Determining Sediment Loads in South African Rivers,
W86-04865 2J

Integrated Debris Flow Observations,
W86-04868 2J

Studies of Sediment Production on Mountain Slopes,
W86-04869 4D

Sediment Measurement in the Yellow River,
W86-04871 2J

Measurement of Suspended Sediment and Bed Load in Sand Bed Channels and the Associated Problems,

W86-05334 5B

Photochemical and Microbial Degradation of 2,4,5-Trichloroaniline in a Freshwater Lake,
W86-05392 5B

Bacterial Profile of Petrochemical Industry Effluents,
W86-05393 5D

FATTY ACIDS
Fatty Acids in Lipids from Particulate Organic Matter in a Eutrophic Lake, Lake Nakanuma, Japan,
W86-05171 5C

FAULTING
Evaluation of Electrical Resistivity Methods in the Investigation of Karstic Features, El Cajon Dam Site, Honduras,
W86-04747 8E

FECAL-RELATED DISEASE
Infectious Diseases and Field Water Supply and Sanitation Among Migrant Farm Workers,
W86-04944 5C

FECES
Occurrence of Gastropoda in the Lake Littoral and Their Role in the Production and Transformation of Detritus II. Ecological Activity of Snails,
W86-05191 2H

FEDERAL JURISDICTION
Roles Along the Rivers,
W86-05327 6E

FEEDBACK
Updated Climate Feedback Diagram,
W86-05314 2B

FEEDLOT WASTES
Feedlot Manure Use on Desert Cropland,
W86-04973 5E

FENITROTHION
In Vivo Metabolism of Fenitrothion (0,0-dimethyl-0-(4-nitro-m-tolyl) phosphorothioate) in Fresh Water Teleost (Tilapia Mossambica),
W86-05268 5B

FERTILIZERS
Effects of Fertilizer, Pig Manure, and Sewage Sludge on Timothy and Soils,
W86-05382 5E

FIELD MEASUREMENTS
Field Measurements of Rates of Bank Erosion and Bank Material Strength,
W86-04893 7B

FIELD TESTS
Field Study of Napropamide Movement through Unsaturated Soil,
W86-05221 5B

FILAMENTOUS BACTERIA
Using ATP To Determine The Chlorine Resistance of Filamentous Bacteria Associated With Activated Sludge Bulking,
W86-05310 5D

FILTRATE
Filtrate and cake quality in sludge dewatering,
W86-04954 5E

FILTRATION
Using a Filter to Remove Giardia Cysts,
W86-04735 5F

Anaerobic Filtration of a Distillery Waste,
W86-04953 5D

Comparative Removal of Toxic Pollutants by Six Wastewater Treatment Processes,
W86-05016 5D

Limitations of Sludge Filtration Theory at Constant Vacuum Pressure,
W86-05287 5D

Contact Flocculation-Filtration Of Low-Turbidity, Highly Coloured Acid Moorland Water,
W86-05303 5F

Algae Removal by Fine Sand/Silt Filtration,
W86-05344 5F

FINANCING
Ingenuity Solves the City's Drainage and Recreational Space Needs,
W86-04737 4A

Tight Money Hampers Cleveland Sewer Jobs,
W86-04754 6C

FINITE ELEMENT METHOD
Curvilinear Finite Element Model for Simulating Two-Well Tracer Tests and Transport in Stratified Aquifers,
W86-05213 2F

Orthogonal-Upstream Finite Element Approach to Modeling Aquifer Contaminant Transport,
W86-05256 5B

FIRE
Tire Fire Oil: Monitoring a New Environmental Pollutant,
W86-04979 5A

FIRN
Contamination of Firn Layers by Radioactive Fission Products from Atmospheric Fallout,
W86-05141 5B

FISH
Transition Metal-Binding Proteins from Three Chesapeake Bay Fish Species,
W86-04760 5C

Metal-Binding Proteins as Metal Pollution Indicators,
W86-04763 5C

Distribution of Carbofuran in a Rice-Paddy-Fish Microecosystem,
W86-04966 5B

Biomass and Production Estimates for an Estuarine Meiobenthic Copepod, with an Instantaneous Assessment of Exploitation by Flatfish Predators,
W86-05198 2L

Residues of Organochlorine Insecticides in Fish from Polluted Water,
W86-05264 5B

Bioconcentration of Lipophilic Compounds by Some Aquatic Organisms,
W86-05324 5B

Distribution of Mercury in the Sediments and Fishes of the Lagoons of Aveiro, Portugal,
W86-05366 5B

FISH BEHAVIOR
Behavioral Assay for Assessing Effects of Pollutants on Fish Chemoreception,
W86-05325 5C

FISH EGGS
Impact of Pulp and Paper Mill Effluent on Egg Hatchability of Pike (Esox lucius L.),
W86-04963 5C

FISH FARMING
Enteric Luminous Microflora of the Pond-Cultured Milk Fish Chanos chanos (Forskal),
W86-05204 2H

Treatment Efficiency of an Improved Ozonation Unit Applied to Fish Culture Situations,
W86-05273 5F

FISH MANAGEMENT
River Basins,
W86-04816 8I

FISH PHYSIOLOGY
Effects of Endosulphan on the Hypothalamo Hypophysial Complex and Fish Reproductive Physiology,
W86-05266 5C

FISH POPULATIONS
River Basins,
W86-04816 8I

FISHERIES
River Basins,
W86-04816 8I

FISHING GEAR
River Basins,
W86-04816 8I

FISHKILL
Investigations into the Causes of Fish Kills Occurring in the River Meuse (1979-1983),
W86-04773 5C

FLASHY STREAMS
Hydrometric Cableways in the Yangtze Valley,
W86-04786 7B

FLOATS
Rising Air Float Technique for the Measurement of Stream Discharge,
W86-04799 7B

FLOCCULATION
Flocculator-Clarifier Performance,
W86-05051 5D

Contact Flocculation-Filtration Of Low-Turbidity, Highly Coloured Acid Moorland Water,
W86-05303 5F

Alternative Aluminium Flocculants Controlling Micropollutants,
W86-05404 5F

FLOOD
Natural Flow Visualization in Lake Eyre, South Australia,
W86-04981 2H

FLOOD DISCHARGE
Developments in Hydrometry in India,
W86-04794 7B

FLOOD FORECASTING
Haddington Flood Warning System,
W86-04808 7B

Accuracy in Rainfall Estimates by Radar, Part III: Application for Short-Term Flood Forecasting,
W86-05111 2B

FLOOD FREQUENCY
Flood Frequency Analysis Using the Cox Regression Model,
W86-05248 2E

FLOOD HYDROGRAPHS
Developments in Hydrometry in India,
W86-04794 7B

Flood Flow Gauging with Tritium in Southern Africa,
W86-04796 7B

FLOOD PEAK
Detention Ponds: The Positive and the Negative,
W86-04738 4A

FLOOD PROFILES
Flood Flow Gauging with Tritium in Southern Africa,
W86-04796 7B

FLOODING
Estimation of Extreme Sediment Transport from Torrential Drainage Basins in the East Alps,
W86-04924 4D

Sinking Cities,
W86-05321 4B

FLOODS
Floods in Britain's Basement; Industry's Demand for Water is Plummeting. As a Result, Rising Ground Water Threatens Tunnels and Deep Foundations in Many Cities,
W86-04969 4C

Control of Spillway Gates During Floods,
W86-04993 8A

Flood Frequency Analysis with Historical and Paleoflood Information,
W86-05225 2E

FLOODWAYS
Morphologic Effects of Channelization: the Case of the Neebing-McIntyre Floodway, Thunder Bay, Ontario, Canada,
W86-05408 8B

FLORIDA
Durable Chemical Grout Solves 'Case of the Disappearing Lake',
W86-04742 8A

Sources and Sinks of Ions in a Soft Water, Acidic Lake in Florida,
W86-05217 5B

FLOW DISCHARGE
Up-Dating of Discharge Rating Curves by Means of Mathematical Models,
W86-04789 7B

Moving Boat Discharge Measurements Using Acoustic Doppler Techniques,
W86-04793 7B

Developments in Hydrometry in India,
W86-04794 7B

Design and Study of the Instrumentation Required for the Measurement of Discharge by the Moving Boat Method,
W86-04795 7B

Experiences Gained During the Hydraulic Investigations on the Cooling Water System of a Thermal Power Station,
W86-04803 8C

FLOW INJECTION ANALYSIS
Flow-Injection Potentiometric Stripping Analysis - A New Concept for Fast Trace Determinations,
W86-04991 5A

Rapid Determination of Chemical Oxygen Demand in Waste Waters and Effluents by Flow Injection Analysis,
W86-04992 5G

FLOW MEASUREMENT
Flow Measurement in Open and Closed Conduits of Gravitational Urban Storm Sewer Networks,
W86-04787 7B

Multilayer Width-Integrated Velocity Measurement Method,
W86-04792 7B

Moving Boat Discharge Measurements Using Acoustic Doppler Techniques,
W86-04793 7B

Design and Study of the Instrumentation Required for the Measurement of Discharge by the Moving Boat Method,
W86-04795 7B

Two Less Conventional Methods of Flow-Gauging,
W86-04798 7B

Rising Air Float Technique for the Measurement of Stream Discharge,
W86-04799 7B

Improvement of Ultrasonic Flowmeter in Rivers in Japan,
W86-04802 7B

Experiences Gained During the Hydraulic Investigations on the Cooling Water System of a Thermal Power Station,
W86-04803 8C

Measurement of Open Channel Flow by the Electromagnetic Gauge,
W86-04804 7B

Flow Measurement at Sewage Treatment Plants,
W86-04806 7B

Haddington Flood Warning System,
W86-04808 7B

Measurement of Debris Flow and Sediment-Laden Flow Using a Conveyor-Belt Flume in a Laboratory,
W86-04866 7B

Monitoring Well Screen Influences on Direct Flowmeter Measurements,
W86-05026 7B

FLOW MEASUREMENTS
Determination of a Measuring Network Along Rivers,
W86-04811 7A

FLOW PATTERN
Determination of a Measuring Network Along Rivers,
W86-04811 7A

Natural Flow Visualization in Lake Eyre, South Australia,
W86-04981 2H

FLOW PROFILES
Stochastic Analysis of Three-Dimensional Flow in a Bounded Domain,
W86-05215 2F

Statistical Inference of Spatial Random Functions,
W86-05254 2A

Resistance to Flow and Velocity Distribution in Rigid Boundary Channels Carrying Sediment-Laden Flow,
W86-05255 2E

Bacillus Phages as Tracers of Water Movement,
W86-05367 5B

FLOW RATES
Daily Flow Statistics of Alaskan Streams,
W86-04784 4A

Flow Measurement at Sewage Treatment Plants,
W86-04806 7B

FLOW REGULATION
Small Hydro Cascade Developments in China,
W86-04723 8C

FLOW REGULATORS
Automatic Throttle Hose - New Flow Regulator,
W86-05237 3F

FLOW RESISTANCE
Resistance to Flow and Velocity Distribution in Rigid Boundary Channels Carrying Sediment-Laden Flow,
W86-05255 2E

FLOW VELOCITY
Multilayer Width-Integrated Velocity Measurement Method,
W86-04792 7B

Moving Boat Discharge Measurements Using Acoustic Doppler Techniques,
W86-04793 7B

Design and Study of the Instrumentation Required for the Measurement of Discharge by the Moving Boat Method,
W86-04795 7B

Two Less Conventional Methods of Flow-Gauging,
W86-04798 7B

Determination of a Measuring Network Along Rivers,
W86-04811 7A

Velocity Effects on Dispersion in Porous Media with a Single Heterogeneity,
W86-05252 5B

Resistance to Flow and Velocity Distribution in Rigid Boundary Channels Carrying Sediment-Laden Flow,
W86-05255 2E

FLOWMETERS
Flow Measurement in Open and Closed Conduits of Gravitational Urban Storm Sewer Networks,
W86-04787 7B

Design and Study of the Instrumentation Required for the Measurement of Discharge by the Moving Boat Method,
W86-04795 7B

Two Less Conventional Methods of Flow-Gauging,
W86-04798 7B

Improvement of Ultrasonic Flowmeter in Rivers in Japan,
W86-04802 7B

Experiences Gained During the Hydraulic Investigations on the Cooling Water System of a Thermal Power Station,
W86-04803 8C

Measurement of Open Channel Flow by the Electromagnetic Gauge,
W86-04804 7B

Flow Measurement at Sewage Treatment Plants,
W86-04806 7B

Monitoring Well Screen Influences on Direct Flowmeter Measurements,
W86-05026 7B

FLUE GAS DESULFURIZATION PROCESSES
Sulfur Oxides Control Technology Series: Flue Gas Desulfurization; Spray Dryer Processes,
W86-04831 5D

FLUID FLOW
Simulation of Fluid Flow and Energy Transport Processes Associated with High-Level Radioactive Waste Disposal in Unsaturated Alluvium,
W86-05223 5E

FLUID MECHANICS
Wave Interaction with a Rectangular Trench,
W86-04987 8B

FLUIDIZED BED PROCESS
Thermal Reactivation of Activated Carbon with a Two-Stage Fluid Bed Reactor,
W86-05144 5D

FLUIDIZED BEDS
Effect of Tracer Diffusion in Biofilm on Residence Time Distributions,
W86-05343 5D

FLUORESCENCE
Fluorescence Correction for Measurements of Enzyme Activity in Natural Waters Using Methylumbelliferyl-substrates,
W86-05087 2K

FLUORIDATION
Shortage of Water Fluoridation chemicals Developing,
W86-04976 5F

Lack of Association Between Fluoridation of Water and Cancer,
W86-05295 5F

FLUORIDES
Effect of Fluorides on Survival and Reproduction of Daphnia Magna,
W86-05024 5C

FLUOROMETRY
In Situ Pulse Light Fluorometer for Chlorophyll Determination as a Monitor for Vertical and Horizontal Phytoplankton Distribution in Lakes,
W86-05175 2H

FOAMING
Conidial Fungi from Fresh-Water Foam,
W86-05396 2I

FOOD-PROCESSING WASTES
Anaerobic Filtration of a Distillery Waste,
W86-04953 5D

Characterization of Aerobic and Facultative Anaerobic Bacteria from the Liquid Phase of an Anaerobic Fixed-Bed Digester Treating a Cheese Whey Substrate,
W86-05199 5D

FOODS
Influence of Water on Reproductive Success and Chemical Composition of Laboratory Reared Populations of Daphnia Magna,
W86-05337 5C

FOREST MANAGEMENT
Storm Flow and Sediment Losses from Site-Prepared Forestland in East Texas,
W86-05224 4C

FOREST WATERSHEDS
Comparison of Methods for Estimating Sulfate Export from a Forested Watershed,
W86-05389 5B

FORESTS
Hydrological and Geomorphological Studies of Debris Slides on Forested Hillslopes in Japan,
W86-04906 2J

Monte Carlo Simulation of Snow Depth in a Forest,
W86-05244 2C

Effects of Acid Deposition on Crops and Forests,
W86-05415 5B

FOULING
Seawater Pumped-Storage Scheme Under Study in Japan,
W86-04995 8C

Biofilm on Reverse Osmosis Membranes,
W86-05123 5D

FRACTAL FRACTURE NETWORK
Dispersion in Fractal Fracture Networks,
W86-05230 5B

FRACTURE PERMEABILITY
Dispersion in Fractal Fracture Networks,
W86-05230 5B

FRACTURE ZONES
Evaluation of Electrical Resistivity Methods in the Investigation of Karstic Features, El Cajon Dam Site, Honduras,
W86-04747 8E

FREQUENCY ANALYSIS
Approach for Frequency Analysis of Multiyear Drought Durations,
W86-05212 2A

Flood Frequency Analysis with Historical and Paleoflood Information,
W86-05225 2E

Flood Frequency Analysis Using the Cox Regression Model,
W86-05248 2E

FRESHWATER MARSHES
Nitrogen Cycling in a Freshwater Marsh of Panicum Hemitomon on the Deltaic Plain of the Mississippi River,
W86-04698 2H

FROGS
Some Observations on Hochstetter's Frog in the Catchment of the Motu River, East Cape,
W86-05197 2H

FROUDE NUMBER
Hydraulics of Two Flowing Layers with Different Densities,
W86-04714 2E

FUNCTIONAL ANALYSIS
Application of Functional Analysis to Optimization of a Variable Head Multireservoir Power System for Long-Term Regulation,
W86-05242 8C

GAGES
Installation and Operation of a Bubble Gauge Network in the Mahakam River Basin, East Kalimantan, Indonesia,
W86-04800 7B

Measurement of Open Channel Flow by the Electromagnetic Gauge,
W86-04804 7B

Hydrometric Data Capture Using Intelligent Solid State Logging Systems,
W86-04805 7B

GAGING
Two Less Conventional Methods of Flow-Gauging,
W86-04798 7B

Rising Air Float Technique for the Measurement of Stream Discharge,
W86-04799 7B

Advanced Hydrologic Instrumentation Activities within the Water Resources Division of the US Geological Survey,
W86-04815 7B

GAS CHROMATOGRAPHY
Gas-Chromatographic Elemental Analysis via Di(Trifluorethyl)Dithiocarbamato Chelates IX. Optimization of the Capillary-Gas-Chromatographic Determination of Trace Metals,
W86-04708 5A

Gas Chromatographic Evaluation of the Organic Components present in the Atmosphere at Trace Levels with the Aid of Carbopack B for Pre-Concentration of the Sample,
W86-04710 5A

Bromination and Gas Chromatographic Determination of Micro Amounts of Acrolein in Rain Water,
W86-04711 5A

Comparison of Direct Headspace and Aqueous Injection Techniques for Halogenated Hydrocarbons in Water,
W86-04712 5A

Determination of Linear Alkylbenzenesulfonates in Sewage Sludge by High-Resolution Gas Chromatography/Mass Spectrometry,
W86-04721 5A

Tire Fire Oil: Monitoring a New Environmental Pollutant,
W86-04979 5A

Methyl Bromide in Surface Drinking Waters,
W86-05331 5A

GENERATORS
Power from Mine Cooling Water,
W86-04703 8C

GEOCHEMISTRY
Geochemistry and Deposition of (7)Be in River-Estuarine and Coastal Waters,
W86-05095 2K

Biogeochemistry of PCBs in Interstitial Waters of a Coastal Marine Sediment,
W86-05292 5B

Hydrology, Development, and Biogeochemistry of Ombrogenous Peat Bogs with Special Reference to Nutrient Relocation in a Western Newfoundland Bog,
W86-05350 2H

GEOHYDROLOGY
Field Validation of the Geohydrology Simulation Model, FEWA,
W86-05071 5B

Occurence of Radioactivity in Public Water Supplies in the United States,
W86-05407 5B

GEOLOGIC FRACTURES
Dispersion in Fractal Fracture Networks,
W86-05230 5B

GEOLOGICAL CONTROL CLAYS
Geologic Control on Soil Composition and Properties, Lake Ojibway Clay Plain, Matagami, Quebec.
W86-05103 2G

GEOLOGY
Practical Applications of Geological Methods at the West Valley Low-Level Radioactive Waste Burial Ground, Western New York,
W86-05138 5E

GEOMORPHOLOGY
Morphology of a Delta Prograding by Bulk Sediment Transport,
W86-04702 2J

GIARDIA CYSTS
Using a Filter to Remove Giardia Cysts,
W86-04735 5F

GLEN CANYON DAM
Glen Canyon Dam's Quick Fix,
W86-04957 8A

GLUTAMATE DEHYDROGENASE
Ammonium Excretion and Glutamate Dehydrogenase Activity of Zooplankton in Great South Bay, New York,
W86-05184 2L

GOCZALKOWICE DAM
Succession of Communities in the Goczalkowice Dam Reservoir in the Period 1955-1982,
W86-05084 2H

GRAVITY SEPARATION
Plate Separation - Budding Conventional Technology,
W86-05011 5D

GREASE
Plate Separation - Budding Conventional Technology,
W86-05011 5D

GREAT BRITAIN
At the Root of the Matter,
W86-05122 5D

GREAT SOUTH BAY
Ammonium Excretion and Glutamate Dehydrogenase Activity of Zooplankton in Great South Bay, New York,
W86-05184 2L

GREECE
Radioactivity of Spas on the Greek Island Ikaria and Influencing Factors,
W86-04691 2K

GROUNDWATER
Role of Subsurface Water Exfiltration in Soil Erosion Processes,
W86-04904 2J

Controlling Toxicity: An Integrated Strategy,
W86-05013 5G

Organic Contamination: Whistling Past the Graveyard,
W86-05014 5G

Design and Performance of a Groundwater Treatment System for Toxic Organic Removal,
W86-05018 5G

Bromoform Formation in Ozonated Groundwater Containing Bromide and Humic Substances,
W86-05043 5F

In-Situ Study of the Occurrence and Rate of Denitrification in a Shallow Unconfined Sand Aquifer,
W86-05112 5B

Modelling of River Water Infiltration Using Oxygen-18 Data,
W86-05118 2F

New Approach to In-Situ Treatment of Contaminated Groundwaters,
W86-05286 5G

Helium Accumulation in Groundwater. II: A Model for the Accumulation of the Crustal 4He Degassing Flux,
W86-05291 2F

Use of Rain and Dry Deposition Compositions for Interpreting Ground-Water Chemistry,
W86-05394 2K

Occurence of Radioactivity in Public Water Supplies in the United States,
W86-05407 5B

GROUNDWATER AVAILABILITY
Water Table of Alder and Neighbouring Elm Stands in a Small Tributary Basin,
W86-05188 2I

GROUNDWATER DISCHARGE
Height and Speed of Capillary Rise of Water in Medium Loam Soils,
W86-04730 2G

GROUNDWATER LEVEL
Floods in Britain's Basement; Industry's Demand for Water is Plummeting. As a Result, Rising Ground Water Threatens Tunnels and Deep Foundations in Many Cities,
W86-04969 4C

GROUNDWATER MINING
Irrigated Agriculture and Ground-Water Mining on the High Plains of Texas, USA,
W86-05283 4B

Sinking Cities,
W86-05321 4B

GROUNDWATER MOVEMENT
Groundwater Movement Studied,
W86-04983 2F

Monitoring Well Screen Influences on Direct Flowmeter Measurements,
W86-05026 7B

Evolving Concepts of Subsurface Contaminant Transport,
W86-05029 5B

Decay of a Disturbed Free Surface in an Anisotropic Porous Medium,
W86-05119 2F

Curvilinear Finite Element Model for Simulating Two-Well Tracer Tests and Transport in Stratified Aquifers,
W86-05213 2F

Groundwater Flow and Sand Body Interconnectedness in a Thick, Multiple-Aquifer System,
W86-05214 2F

Stochastic Analysis of Three-Dimensional Flow in a Bounded Domain,
W86-05215 2F

Comparison of Several Methods for the Solution of the Inverse Problem in Two-Dimensional Steady State Groundwater Flow Modeling,
W86-05216 2F

Comparative Study of the Green and Ampt Analysis for a Falling Water Table in a Stratified Profile,
W86-05218 2F

Orthogonal-Upstream Finite Element Approach to Modeling Aquifer Contaminant Transport,
W86-05256 5B

Unconfined Groundwater Flow Calculation Into a Tunnel,
W86-05298 2F

GROUNDWATER POLLUTION
Delineating Zones of Contribution for Public Supply Wells to Protect Ground Water in New England,
W86-04705 5G

Denitrification in a Limestone Aquifer in Relation to the Security of Low-Nitrate Groundwater Supplies,
W86-04751 5B

Steam-Regenerated Activated Carbon: An Emission-Free, Cost-Effective Ground Water Treatment Process,
W86-04950 5G

Caustic Waste Menaces Jamaica,
W86-04970 5C

Sanitary Landfill Leachate Recycle,
W86-04971 5E

Groundwater Movement Studied,
W86-04983 2F

Volatile Organic Chemical Contamination of Groundwater Resources in the U.S.,

MANGANESE
Investigations About the Fate of Heavy Metals in Lakes: II. The Role of Iron and Manganese Remobilization to the Hypolimnic Enrichment of Heavy Metals (Untersuchungen zum Verhalten von Schwermetallen in Gewassern: II. Die Bedeutung der Eisen- und Mangan-Remobilisierung fuer die Hypolimnische Anreicherung von Schwermetallen),
W86-05088 5B

MANURE
Effects of Fertilizer, Pig Manure, and Sewage Sludge on Timothy and Soils,
W86-05382 5E

MAPPING
Tracking Salty Soil, Saving Fresh Water,
W86-04982 3C

MARINE ANIMALS
Chemical Forms of Arsenic in Marine Organisms, with Emphasis on Hemifusus Species,
W86-05374 5B

MARINE ENVIRONMENT
Safe Use of the Assimilative Capacity of the Marine Environment for Waste Disposal - Is it Feasible,
W86-05376 5G

MARINE POLLUTION
Strategy for Design of Marine Pollution Monitoring Studies,
W86-05353 5G

MARINE SEDIMENTS
Possibility of Melioration and Agricultural use of Liman and Marine Sediments,
W86-04729 5G

Biogeochemistry of PCBs in Interstitial Waters of a Coastal Marine Sediment,
W86-05292 5B

Trace Metals In Marine Surface Sediments Of The Palos Verdes Shelf, 1974 TO 1980,
W86-05307 5B

MARSH PLANTS
Prairie Marshes in Western Canada, with Specific Reference to the Ecology of Five Emergent Macrophytes,
W86-05351 2H

MARSHES
Nitrogen Cycling in a Freshwater Marsh of Panicum Hemitomon on the Deltaic Plain of the Mississippi River,
W86-04698 2H

Differences in Standing Live and Dead Crops in Estuarine Marshes on Vancouver Island,
W86-05348 2L

Prairie Marshes in Western Canada, with Specific Reference to the Ecology of Five Emergent Macrophytes,
W86-05351 2H

MASS SPECTROMETRY
Determination of Linear Alkylbenzenesulfonates in Sewage Sludge by High-Resolution Gas Chromatography/Mass Spectrometry,
W86-04721 5A

MASURIAN LAKES
Detritus in the Littoral of Several Masurian Lakes (Sources and Fates),
W86-05189 5B

MATHEMATICAL ANALYSIS
Hydraulics of Two Flowing Layers with Different Densities,
W86-04714 2E

Measure of Plankton Community Similarity Utilizing Variable Weighting of Total Density and Taxonomic Proportionality,
W86-05160 2H

Comparative Study of the Green and Ampt Analysis for a Falling Water Table in a Stratified Profile,
W86-05218 2F

Unconfined Groundwater Flow Calculation Into a Tunnel,
W86-05298 2F

MATHEMATICAL EQUATIONS
Equations for Estimating Discharge in Steep Channels with Coarse Bed Material,
W86-04791 2E

Hydrodynamic Model of Sediment Transport in Rill Flows,
W86-04926 4D

Prediction of Sediment Yield for Mountainous Basins in Columbia, South America,
W86-04927 4D

Comparison of Several Methods for the Solution of the Inverse Problem in Two-Dimensional Steady State Groundwater Flow Modeling,
W86-05216 2F

Equivalent Formulations for Solute and Water Movement in Soils,
W86-05251 2G

MATHEMATICAL MODELING
Groundwater Recharge Estimate by Numerical Modeling: A Case Study,
W86-05146 2F

MATHEMATICAL MODELS
Morphology of a Delta Prograding by Bulk Sediment Transport,
W86-04702 2J

Up-Dating of Discharge Rating Curves by Means of Mathematical Models,
W86-04789 7B

Method for Uniformizing the Stage-Discharge Relations of Stable River Beds and Its Application,
W86-04790 7B

W86-05358 7B

MONITORING MANURE
Improved Alkalimetric Monitoring for Anaerobic Digestion of High-Strength Wastes,
W86-05037 5D

MONOD MODEL
Kinetics of Anaerobic Purification of Industrial Wastewater,
W86-04745 5D

MONTE CARLO METHOD
Monte Carlo Simulation of Snow Depth in a Forest,
W86-05244 2C

MONTMORILLONITE
Adsorption of Organic Pollutants on Montmorillonite Treated with Amines,
W86-05022 5F

MOORLAND
Contact Flocculation-Filtration Of Low-Turbidity, Highly Coloured Acid Moorland Water,
W86-05303 5F

MORTALITY
Mersey Estuary (U.K.) Bird Mortalities - Causes, Consequences and Correctives,
W86-05370 5C

MOUNTAINS
Some Problems Related to Sediment Transport Measurement in Steep Mountain Streams,
W86-04867 2J

Studies of Sediment Production on Mountain Slopes,
W86-04869 4D

Applicability of the Universal Soil Loss Equation in Mountain Watersheds in Semiarid and Humid Regions,
W86-04920 4D

MULTIPLE REGRESSION ANALYSIS
Determination of the Accuracy of Water Level Observation,
W86-04801 7B

MUNICIPAL WASTES
Evaluating Maturity and Metal Transfer of MSW Compost,
W86-04972 5E

Feasibility of Constructing a Waste-to-Energy Incinerator to Generate Electricity for a Colocated Wastewater Treatment Plant,
W86-05129 5E

Municipal Sludge Composting Technology Evaluation,
W86-05131 5E

MUNICIPAL WASTEWATER
Improving POTW Performance Using the Composite Correction Program Approach: Handboodk,
W86-04830 5D

Municipal Wastewater Sludge Combustion Technology.
W86-04835 5D

Process Design Manual for Land Treatment of Municipal Wastewater: Supplement on Rapid Infiltration and Overland Flow.
W86-04840 5D

Overland Flow,
W86-04842 5D

Pretreatment by the Metal Finishing Industry,
W86-05012 5D

MUNICIPAL WATER
Shortage of Water Fluoridation Chemicals Developing,
W86-04976 5F

MUSSELS
Trace Metals in Mussels (Mytilus edulis) from the Waddenzee, Coastal North Sea and the Estuaries of Ems, Western and Eastern Scheldt,
W86-04967 5C

MUTAGENICITY
Screening Complex Hazardous Wastes for Mutagenic Activity using a Modified Version of the TLC/Salmonella Assay,
W86-04709 5A

MYCOFLORA
Myco-Ecological Studies of Two Water-Bodies from Andhra Pradesh, India,
W86-05397 2I

NAPROPAMIDE
Field Study of Napropamide Movement through Unsaturated Soil,
W86-05221 5B

NATURAL WATERS
Sorption of Trace Metals by Humic Materials in Soils and Natural Waters,
W86-04715 5B

Fluorescence Correction for Measurements of Enzyme Activity in Natural Waters Using Methylumbelliferyl-substrates,
W86-05087 2K

NEEBING-MCINTYRE FLOODWAY
Morphologic Effects of Channelization: the Case of the Neebing-McIntyre Floodway, Thunder Bay, Ontario, Canada,
W86-05408 8B

NEMATODES
Effects of Moisture on Soil Microorganisms and Nematodes: A Field Experiment,
W86-05203 2G

NEPAL
Water and Nepal,
W86-05075 5C

NETWORKS
Method For Using Computerized Customer Information in Water Distribution Network Models,
W86-04749 7B

Advances in Hydrometry.
W86-04785 7B

Determination of a Measuring Network Along Rivers,
W86-04811 7A

Advanced Hydrologic Instrumentation Activities within the Water Resources Division of the US Geological Survey,
W86-04815 7B

District Metering,
W86-05316 7B

NEUTRAL-GRAVITY PARTICLES
Plate Separation - Budding Conventional Technology,
W86-05011 5D

NEUTRALIZATION
Neutralization of Wastewaters Containing Cyanides; Part II: Elimination by Chemical Oxidation in Solution,
W86-05289 5D

NEW ENGLAND
Delineating Zones of Contribution for Public Supply Wells to Protect Ground Water in New England,
W86-04705 5G

NEW MEXICO
Soil Water Movement and Recharge Through Sand at a Semiarid Site in New Mexico,
W86-05247 2G

NEW YORK
New York City's Ozone Demonstration Plant Design,
W86-05042 5F

NEW YORK BIGHT
Fate of Trace Metals in the Sediments of the New York Bight,
W86-04834 5B

NEWFOUNDLAND
Hydrology, Development, and Biogeochemistry of Ombrogenous Peat Bogs with Special Reference to Nutrient Relocation in a Western Newfoundland Bog,
W86-05350 2H

NICKEL
Effect of Nickel on Methane Production and Butyric Acid Utilization in a Downflow Fixed-Film Reactor,
W86-04743 5D

NIGER DELTA
Analysis of Stratigraphic Control on River Bank Failure,
W86-04748 4D

NIGERIA
Analysis of Stratigraphic Control on River Bank Failure,
W86-04748 4D

Evaluation of the Water Supply and Sanitation Problems in Nigeria,
W86-05300 5F

Public Health Significance Of Industrial Pollution In Zaria, Nigeria,
W86-05301 5C

NILE RIVER
Field and Laboratory Studies on Nile Phytoplankton in Egypt. I. Some Physical and Chemical Characteristics,
W86-05173 2H

NITRATE
Design of Trickling Filter Nitrification Towers,
W86-05021 5D

NITRATES
Denitrification in a Limestone Aquifer in Relation to the Security of Low-Nitrate Groundwater Supplies,
W86-04751 5B

Second Derivative Ultraviolet Spectroscopy and Sulfamic Acid Method for Determination of Nitrates in Water,
W86-05072 5A

Relation Between Drinking Water Nitrate and Total Nitrate Intake,
W86-05149 5G

Primary Production and Effects of Enrichment with Nitrate and Phosphate on Phytoplankton in the Barra Bonita Reservoir (State of Sao Paulo, Brazil),
W86-05157 5C

NITRIFICATION
Interactions of Temperature, pH, and Biomass on the Nitrification Process,
W86-05020 5D

Design of Trickling Filter Nitrification Towers,
W86-05021 5D

Activated Sludge Control for Seasonal Nitrification,
W86-05030 5D

Prediction of Nitrification in Water Hyacinth Treatment Systems,
W86-05033 5D

Inhibition Kinetics of Nitrification in Continuous-Flow Reactors,
W86-05052 5D

NITROGEN
Effect of Irrigation Efficiencies on Nitrogen Leaching Losses,
W86-05235 3F

Evaluation of Nitrogen Availability Indexes for a Sludge Compost Amended Soil,
W86-05386 5E

Mineralization of Nitrogen in Soils Amended with Organic Wastes,
W86-05391 5E

Effect of Airborne Sulphur and Nitrogen Deposition on Aquatic and Terrestrial Heathland Vegetation,
W86-05416 5B

NITROGEN COMPOUNDS
Headwater Stream Losses of Nitrogen from Two Coastal Plain Watersheds,
W86-05398 5B

NITROGEN CYCLE
Nitrogen Cycling in a Freshwater Marsh of Panicum Hemitomon on the Deltaic Plain of the Mississippi River,
W86-04698 2H

NITROGEN OXIDE
Effects of Acid Deposition on Crops and Forests,
W86-05415 5B

NITROGEN REMOVAL
Role of Aquatic Plants in Wastewater Treatment by Artificial Wetlands,
W86-05342 5D

NORTH DAKOTA
Evaporite Mineralogy Associated with Saline Seeps in Southwestern North Dakota,
W86-05128 3C

NORTH SEA
Transport and Water Quality Modelling in the Southern North Sea in Relation to Coastal Pollution Research and Control,
W86-05377 5B

NUCLEIC ACIDS
Chlorine Dioxide Reactivity with Nucleic Acids,
W86-05341 5F

NUTRIENT AVAILABILITY
Evaluation of Nitrogen Availability Indexes for a Sludge Compost Amended Soil,
W86-05386 5E

Prediction of Available Zinc in Sewage Sludge-amended Soils,
W86-05387 5E

NUTRIENTS
Limnological Observations on Rihand Reservoir (Uttar Pradesh) with Reference to the Physical and Chemical Parameters of its Water,
W86-05165 2H

Hydrology, Development, and Biogeochemistry of Ombrogenous Peat Bogs with Special Reference to Nutrient Relocation in a Western Newfoundland Bog,
W86-05350 2H

OCEAN CIRCULATION
Laboratory Modeling of a Coastal Upwelling,
W86-04980 2L

ODOR CONTROL
Controlling Taste and Odor with Chlorine Dioxide,
W86-04733 5F

Sludge Odor Control: If At First You Don't Succeed...,
W86-04736 5D

Odor and Corrosion Control in Sanitary Sewerage Systems and Treatment Plants,
W86-04821 5D

OFF-GAS CONTROL
Reliable Ozone Disinfection using Off-gas Control,
W86-05068 5D

OHIO
Tight Money Hampers Cleveland Sewer Jobs,
W86-04754 6C

OIL
Plate Separation - Budding Conventional Technology,
W86-05011 5D

OIL INDUSTRY
Treatment of a Petrochemical Wastewater in Sequencing Batch Reactor,
W86-04945 5D

Determination of Bromide in Natural Waters by Flow Injection Analysis,
W86-04990 5A

OIL POLLUTION
Tire Fire Oil: Monitoring a New Environmental Pollutant,
W86-04979 5A

OIL SHALE
Growth and Photosynthetic Response of a Freshwater Alga, Selenastrum capricornutum, to an Oil Shale By-Product Water,
W86-05265 5C

Treatment of an In-Situ Oil-Shale Retort Water,
W86-05285 5F

OIL SLICKS
Satellite Thermal Observation of Oil Slicks on the Persian Gulf,
W86-04689 7B

OIL SPILLS
Evolution of Bacterial Populations in Salt Marsh Sediments of Ile Grande Polluted by Amoco Cadiz. (Evolution des Populations Bacteriennes dans les Sediments des Marais Maritimes de l'Ile Grande Pollues par l'Amoco Cadiz,).
W86-05167 5C

Impact of the Ixtoc-1 Oil Spill on Zooplankton,
W86-05187 5C

Ecological Impact of an Oil Spill: Utilization of Biological Indicators,
W86-05373 5C

OLIGOTROPHIC LAKES
Clearance Rates of Crustacean Macrofiltrators: The Nature of in situ Rate Depressions in a Fertilized Oligotrophic Lake in the Kuokkel Area, Northern Sweden,
W86-05154 5C

OMAHA
Omaha Moves From 'Dispose All' To Management,
W86-04974 5E

ON-SITE DISPOSAL
Design and Performance of a Groundwater Treatment System for Toxic Organic Removal,
W86-05018 5G

ON-SITE INVESTIGATIONS
On-Site Assessment of Rock Discontinuities from Resistivity Logs. T-L Log: A New Logging Technique,
W86-05113 8E

ONONDAGA LAKE
Phosphorus Deposition from the Epilimnion of Onondaga Lake,
W86-05280 2H

ONTARIO
Temporal and Spatial Trends in Metal Loadings to Sediments of the Turkey Lakes, Ontario,
W86-05346 5B

OPEN CHANNEL FLOW
Resistance to Flow and Velocity Distribution in Rigid Boundary Channels Carrying Sediment-Laden Flow,
W86-05255 2E

OPTIMIZATION
Implications of Head Loss Path Choice in the Optimization of Water Distribution Networks,
W86-05229 5F

ORANGE RIVER
Aspects of the Feeding Ecology of Turbin Water Zooplankton. In situ Studies of Community Filtration Rates in Silt-Laden Lake le Roux, Orange River, South Africa,
W86-05183 2H

OREGON
Using the Fecal Coliform Test for Sewer and Storm Drain Maintenance,
W86-04687 5D

Using a Filter to Remove Giardia Cysts,
W86-04735 5F

ORGANIC ACIDS
Methanogenic Digestion Using Mixed Substrate of Acetic, Propionic and Butyric Acids,
W86-05345 5D

ORGANIC COMPOUNDS
Gas Chromatographic Evaluation of the Organic Components present in the Atmosphere at Trace Levels with the Aid of Carbopack B for Pre-Concentration of the Sample,
W86-04710 5A

Reactivity of Nitrogenous and Other Organic Compounds with Aqueous Chlorine,
W86-04960 5F

Design and Performance of a Groundwater Treatment System for Toxic Organic Removal,
W86-05018 5G

Adsorption of Organic Pollutants on Montmorillonite Treated with Amines,
W86-05022 5F

Modeling and Performance of the Activated Sludge-Powdered Activated Carbon Process in the Presence of 4,6-Dinitro-o-Cresol,
W86-05136 5D

Turbidity Removal from Clay Suspensions by Use of Organic Polymeric Flocculants,
W86-05260 5D

Powered Activated Carbon and Ozone-Assisted Activated Sludge Treatment for Removal of Toxic Organic Compounds,
W86-05274 5D

Determination of the Percentage Adsorption of Unknown Organic Compounds from Water with a Multi-Column Technique,
W86-05332 5A

Effects of Natural and Synthetic Surface Active Substances on the Electrochemical Reduction of Cadmium in Natural Waters,
W86-05334 5B

Organic Micropollutants in Dutch Coastal Waters,
W86-05359 5B

ORGANIC LOADING
Organic Loading Study Of Full-Scale Sequencing Batch Reactors,
W86-05308 5D

ORGANIC MATTER
Tracer Measurements in Lowland Rivers,
W86-04797 7B

Comparative Removal of Toxic Pollutants by Six Wastewater Treatment Processes,
W86-05016 5D

Alternative Aluminium Flocculants Controlling Micropollutants,
W86-05404 5F

Organic Micropollutants and the Protection of Water Supplies,
W86-05405 5B

ORGANIC PESTICIDES
Effects of Temperature on the Acute Toxicity of PCP in the Midge Chironomus Riparius Meigen,
W86-04964 5C

ORGANIC SOLVENTS
Benefits of Microprocessor Control of Curing Ovens for Solvent-Based Coatings,
W86-04818 5B

ORGANIC WASTES
Omaha Moves From 'Dispose All' To Management,
W86-04974 5E

Fused Silica Open Tubular Column Optimized for the Analysis of Volatile Organic Pollutants,
W86-04985 5A

Mineralization of Nitrogen in Soils Amended with Organic Wastes,
W86-05391 5E

ORGANICS
Organic Contamination: Whistling Past the Graveyard,
W86-05014 5G

ORGANOCHLORINE INSECTICIDES
Residues of Organochlorine Insecticides in Fish from Polluted Water,
W86-05264 5B

ORGANOPHOSPHOROUS PESTICIDES
Nature of Dichlorvos Intoxication in a Freshwater Prawn, Macrobrachium Lamarrei (H. Milne Edwards),
W86-05412 5C

OVERLAND FLOW
Process Design Manual for Land Treatment of Municipal Wastewater: Supplement on Rapid Infiltration and Overland Flow.
W86-04840 5D

Overland Flow,
W86-04842 5D

Development of Drainage Networks,
W86-04921 4D

Design Model for the Overland Flow Process,
W86-05034 5D

Overland Flow Hydrographs for SCS Type II Rainfall,
W86-05239 2E

OXIDANTS
Influence of Water Preozonation on the Consumption of Oxidants,
W86-05065 5F

OXIDATION
Oxidation of 2-Chlorophenol Using Ozone and Ultraviolet Radiation,
W86-05057 5D

Neutralization of Wastewaters Containing Cyanides; Part II: Elimination by Chemical Oxidation in Solution,
W86-05289 5D

OXYGEN DEFICIT
Declining Lake Sediment Phosphorus Release and Oxygen Deficit Following Wastewater Diversion,
W86-05025 5C

Influence of an Artificial Hydraulic Regime on Water Quality in the Tidal River Lagan, Northern Ireland,
W86-05080 5G

OXYGEN TRANSFER
Evaluation of Factors Affecting the Oxygen Transfer from High-Speed Floating Surface Aerators,
W86-05133 5D

Effect of Biomass on Oxygen Transfer in RBC Systems,
W86-05134 5D

OXYGEN UPTAKE
Effect of Biomass on Oxygen Transfer in RBC Systems,
W86-05134 5D

OXYGENATION
Accuracy and Precision of Plant Scale and Shop Clean Water Oxygen Transfer Tests,
W86-05132 5D

OYSTERS
Effects of Hydraulic Dredging to Control Oyster Drills on Benthic Macrofauna of Oyster Grounds in Delaware Bay, New Jersey,
W86-05153 5C
Benthic Macrofauna Associated with the Oyster Reefs of the James River Estuary, Virginia, USA,
W86-05166 2L
Impact of Tributyl Tin (TBT) Antifouling Paints on Molluscan Fisheries,
W86-05372 5C

OZONATION
Ozonization of Humic Acids. Medium Term Toxicity Towards Daphnia Magna,
W86-05041 5C
Application of Ozone for Water Treatment in the United Kingdom Current Practice and Recent Research,
W86-05059 5F
Influence of Water Preozonation on the Consumption of Oxidants,
W86-05065 5F
Automation of a Plant Treating Water with Ozone,
W86-05066 5F
Removal of Aromatic Nitro-Compounds from Water by Ozonation,
W86-05148 5D
Catalytic Effects of Ultraviolet Light and/or Ultrasound on the Ozone Oxidation of Humic Acid and Trihalomethane Precursors,
W86-05270 5D
Principles of Ozone Oxidation and Disinfection Design,
W86-05271 5D
Control of a Fully Automated Ozone Application System,
W86-05272 5D
Treatment Efficiency of an Improved Ozonation Unit Applied to Fish Culture Situations,
W86-05273 5F
Powered Activated Carbon and Ozone-Assisted Activated Sludge Treatment for Removal of Toxic Organic Compounds,
W86-05274 5D
Ozone Absorption with Reaction in Benzenesulfonic Acid Aqueous Solutions,
W86-05284 5F

OZONE
Uses of Ozone in Water Treatment – A Review,
W86-04955 5F
Biodegradability and GAC Adsorbability of Micropollutants by Preozonation,
W86-05040 5F
New York City's Ozone Demonstration Plant Design,
W86-05042 5F
Bromoform Formation in Ozonated Groundwater Containing Bromide and Humic Substances,
W86-05043 5F
Ozonation at the 900 cfs Los Angeles Water Purification Plant,
W86-05044 5F
Oxidation of 2-Chlorophenol Using Ozone and Ultraviolet Radiation,
W86-05057 5D
Application of Ozone for Water Treatment in the United Kingdom Current Practice and Recent Research,
W86-05059 5F
Influence of Water Preozonation on the Consumption of Oxidants,
W86-05065 5F
Automation of a Plant Treating Water with Ozone,
W86-05066 5F
Reliable Ozone Disinfection using Off-gas Control,
W86-05068 5D
Ozone and Activated Carbon for Tertiary Wastewater Treatment,
W86-05269 5D

PAPUA NEW GUINEA
From Swamp to Lake: Recent changes in a Lowland Tropical Swamp,
W86-04697 5C

PARAQUAT
Removal of Paraquat, Diquat, and Amitrole from Aqueous Solution by Chemically Modified Peat,
W86-05383 5G

PARTICLE SIZE
Particle Size Characteristics of Fluvial Suspended Sediment,
W86-04934 5B

PARTICULATE MATTER
Determination of Linear Alkylbenzenesulfonates in Sewage Sludge by High-Resolution Gas Chromatography/Mass Spectrometry,
W86-04721 5A
In situ Measurements of Particulate Matter Transport in Rivers,
W86-04857 2J
Fatty Acids in Lipids from Particulate Organic Matter in a Eutrophic Lake, Lake Nakanuma, Japan,
W86-05171 5C
Some Recent Developments in the Characterization of Estuarine Particulates,
W86-05360 5A

PATH OF POLLUTANTS
Sorption of Trace Metals by Humic Materials in Soils and Natural Waters,
W86-04715 5B
Simulated Transport of Polycyclic Aromatic Hydrocarbons in Artifical Streams,
W86-04824 5B
Evolving Concepts of Subsurface Contaminant Transport,
W86-05029 5B
Field Validation of the Geohydrology Simulation Model, FEWA,
W86-05071 5B
Two-dimensional Pollutant Migration in Soils of Finite Depth,
W86-05102 5B
In-Situ Study of the Occurrence and Rate of Denitrification in a Shallow Unconfined Sand Aquifer,
W86-05112 5B
Leaching of Herbicides Through Undisturbed Cores of a Structured Clay Soil,
W86-05125 5B
Heavy Metals in Rain Water Collected Over the Reservoirs at Kozlowa Gora and Goczalkowice,
W86-05195 5B
Second-Order Approach for the Modeling of Dispersive Transport in Porous Media: 1. Theoretical Development,
W86-05205 5B
Second-Order Approach for the Modeling of Dispersive Transport in Porous Media: 2. Application to Solute Motion in Pipes and Capillary Tubes,
W86-05206 5B
Curvilinear Finite Element Model for Simulating Two-Well Tracer Tests and Transport in Stratified Aquifers,
W86-05213 2F
Sources and Sinks of Ions in a Soft Water, Acidic Lake in Florida,
W86-05217 5B
Field Study of Napropamide Movement through Unsaturated Soil,
W86-05221 5B
Use of Stream Chemistry to Estimate Hydrologic Parameters,
W86-05227 2K
Dispersion in Fractal Fracture Networks,
W86-05230 5B
Equivalent Formulations for Solute and Water Movement in Soils,
W86-05251 2G
Velocity Effects on Dispersion in Porous Media with a Single Heterogeneity,
W86-05252 5B
Orthogonal-Upstream Finite Element Approach to Modeling Aquifer Contaminant Transport,
W86-05256 5B
Residues of Organochlorine Insecticides in Fish from Polluted Water,
W86-05264 5B
Solute Dispersion and Sediment Transport in Estuaries,
W86-05361 5B
Permethrin Washoff from Cotton Plants by Simulated Rainfall,
W86-05385 5B
One-Dimensional Model of Chemical Diffusion and Sorption in Saturated Soil and Aquatic Systems,
W86-05390 5B
Photochemical and Microbial Degradation of 2,4,5-Trichloroaniline in a Freshwater Lake,
W86-05392 5B
Bacterial Profile of Petrochemical Industry Effluents,
W86-05393 5D
Role of Speciation in Mercury Methylation in Sediments and Water,
W86-05395 5B
Headwater Stream Losses of Nitrogen from Two Coastal Plain Watersheds,
W86-05398 5B

PATH OF POLLUTION
Use of Dyes and Proteins as Indicators of Virus Adsorption to Soils,
W86-05330 5B

PATHOGENIC BACTERIA
Serotypes of Vibrio parahaemolyticus Isolates from Hydrobiologically Dissimilar Aquatic Environments,
W86-05062 5A

PEAK DEMAND
Cross Solent Watermain,
W86-04753 5F

PEAKING CAPACITY
Construction of Czechoslovakia's Dlouhe Strane Project,
W86-04998 8C

PEAT
Removal of Paraquat, Diquat, and Amitrole from Aqueous Solution by Chemically Modified Peat,
W86-05383 5G

PEAT BOGS
Hydrology, Development, and Biogeochemistry of Ombrogenous Peat Bogs with Special Reference to Nutrient Relocation in a Western Newfoundland Bog,
W86-05350 2H

PEEL-HARVEY ESTUARY
Monitoring Effects of Catchment Management Practices on Phosphorus Loads into the Eutrophic Peel-Harvey Estuary, Western Australia,
W86-05357 5B

PENSTOCK
Hydro Plant Frequency Regulation,
W86-05009 8C

PERCOLATION
Rapid Infiltration,
W86-04841 5D

Determination of Saturated Hydraulic Conductivity from Soil Percolation Test Results,
W86-05124 2G

PERFORMANCE EVALUATION
Evaluation of Treatment Plant Performance: Causes, Frequency, and Duration of Upsets,
W86-05032 5D

Accuracy and Precision of Plant Scale and Shop Clean Water Oxygen Transfer Tests,
W86-05132 5D

PERIPHYTON
Early Warning of Eutrophication in Rivers by Analysis of Periphyton Chlorophyll a,
W86-04772 5A

Zonation in Periphyton Colonizing Concrete Blocks on the Shore of Lake Zegrzynskie,
W86-05193 2H

PERMEABILITY
Design of Pervious Pressure Tunnels,
W86-05008 8A

PERMEABILITY COEFFICIENT
Determination of Saturated Hydraulic Conductivity from Soil Percolation Test Results,
W86-05124 2G

PERMETHRIN
Permethrin Washoff from Cotton Plants by Simulated Rainfall,
W86-05385 5B

PERSIAN GULF
Satellite Thermal Observation of Oil Slicks on the Persian Gulf,
W86-04689 7B

PESTICIDES
Chronic Toxicity of 4-Nitrophenol to Daphnia magna Straus Under Static-Renewal and Flow-Through Conditions,
W86-04962 5C

Distribution of Carbofuran in a Rice-Paddy-Fish Microecosystem,
W86-04966 5B

Methyl Bromide in Surface Drinking Waters,
W86-05331 5A

Permethrin Washoff from Cotton Plants by Simulated Rainfall,
W86-05385 5B

PETROCHEMICAL EFFLUENT
Influence of Different Substrate pH Values on the Performance of a Downflow Anaerobic Fixed Bed Reactor Treating a Petrochemical Effluent,
W86-04744 5D

PHASE SEPARATED ANAEROBIC FILTERS
Recent Developments in Hydrogen Management During Anaerobic Biological Wastewater Treatment,
W86-04746 5D

PHENOL
Adsorption, Desorption, and Bioregeneration in an Anaerobic, Granular Activated Carbon Reactor for the Removal of Phenol,
W86-05017 5D

PHENOLS
Anaerobic Treatment of Phenol by an Expanded-Bed Reactor,
W86-05053 5D

PHILLIPINES
Electro-Mechanical Equipment for the Kalayaan Pumped-Storage Plant,
W86-04999 8C

PHOSPHATE MINING
Design and Performance of a Groundwater Treatment System for Toxic Organic Removal,
W86-05018 5G

PHOSPHATES
Detergent Phosphate Bans and Eutrophication,
W86-04719 5G

Primary Production and Effects of Enrichment with Nitrate and Phosphate on Phytoplankton in the Barra Bonita Reservoir (State of Sao Paulo, Brazil),
W86-05157 5C

PHOSPHOROUS REMOVAL
Phosphorus Transformation in a Rapid Infiltration Column,
W86-05139 5D

PHOSPHORUS
Declining Lake Sediment Phosphorus Release and Oxygen Deficit Following Wastewater Diversion,
W86-05025 5C

Availability of Phosphorus and the Species Composition of the Spring Phytoplankton in Lake Erken,
W86-05156 5C

Chemical and Microbiological Processes as Regulators of the Exchange of Substances between Sediments and Water in Shallow Eutrophic Lakes,
W86-05161 5C

Phosphorus Deposition from the Epilimnion of Onondaga Lake,
W86-05280 2H

Monitoring Effects of Catchment Management Practices on Phosphorus Loads into the Eutrophic Peel-Harvey Estuary, Western Australia,
W86-05357 5B

PHOSPHORUS REMOVAL
Detergent Phosphate Bans and Eutrophication,
W86-04719 5G

Phosphorus Removal at the Lower Molonglo Water Quality Control Centre,
W86-05081 5D

PHOTOCHEMICAL DEGRADATION
Photochemical and Microbial Degradation of 2,4,5-Trichloroaniline in a Freshwater Lake,
W86-05392 5B

PHOTOLYSIS
Singlet Oxygen in Surface Waters. 3. Photochemical Formation and Steady-State Concentrations in Various Types of Waters,
W86-04720 2K

PHOTOMETRY
Photometric Determination of Boron in Ground- and Surface Water (Photometrische Bestimmung von Bor Im Grund- und Oberflachenwasser),
W86-04707 5A

PHOTOSYNTHESIS
Photosynthetic Production of a Brackish Water Community of Chara Tomentosa L. and Its Dependence on Environmental Conditions,
W86-05151 2C

Environmental Effects on Specific Rate of Photosynthesis in Small Fertilized Lakes (Northwest of the USSR),
W86-05155 5C

Comparison of Carbon-Specific Growth Rates and Rates of Cellular Increase of Phytoplankton in Large Limnetic Enclosures,
W86-05178 2H

PHTHALATES
Environmental Fate and Aquatic Toxicology Studies on Phthalate Esters,
W86-04765 5C

PHYSICAL PROPERTIES
Field and Laboratory Studies on Nile Phytoplankton in Egypt, I. Some Physical and Chemical Characteristics,
W86-05173 2H

Some Recent Developments in the Characterization of Estuarine Particulates,
W86-05360 5A

PHYSICO-CHEMICAL STRESS
Impact of Physio-Chemical Stress on the Toxigenicity of Vibrio Cholerae,
W86-05105 5B

PHYSICOCHEMICAL PROPERTIES
Thermal and Oxygen Conditions and the Chemical Composition of the Water in the Great Masurian Lakes,
W86-05194 5C

PHYSIOLOGICAL ECOLOGY
Effects of Acid Exposure on the Ion Regulation and Seawater Adaptation of Coho Salmon (Oncorhynchus kisutch) Parrs and Smolts,
W86-05061 5C

PHYTOPLANKTON
Clearance Rates of Crustacean Macrofiltrators: The Nature of in situ Rate Depressions in a Fertilized Oligotrophic Lake in the Kuokkel Area, Northern Sweden,
W86-05154 5C

Environmental Effects on Specific Rate of Photosynthesis in Small Fertilized Lakes (Northwest of the USSR),
W86-05155 5C

Availability of Phosphorus and the Species Composition of the Spring Phytoplankton in Lake Erken,
W86-05156 5C

Primary Production and Effects of Enrichment with Nitrate and Phosphate on Phytoplankton in the Barra Bonita Reservoir (State of Sao Paulo, Brazil),
W86-05157 5C

Analysis of the Biotic Community in a Kumaun Himalayan Lake, Nainital (U.P.), India,
W86-05159 5C

Influence of Copper in Various Forms on Natural Phytoplanktonic Populations from the Saguenay River, Quebec, Canada. (Influence de la Speciation du Cuivre sur les Populations Phytoplanctoniques Naturelles de la Riviere du Saguenay, Quebec, Canada.),
W86-05162 5C

Fatty Acids in Lipids from Particulate Organic Matter in a Eutrophic Lake, Lake Nakanuma, Japan,
W86-05171 5C

Field and Laboratory Studies on Nile Phytoplankton in Egypt. I. Some Physical and Chemical Characteristics,
W86-05173 2H

Compatibility of Carbon Uptake Rates Calculated from Stable and Radioactive Isotope Data: Implications for the Design of Experimental Protocols in Aquatic Primary Productivity,
W86-05174 2H

In Situ Pulse Light Fluorometer for Chlorophyll Determination as a Monitor for Vertical and Horizontal Phytoplankton Distribution in Lakes,
W86-05175 2H

14C-Labelling Patterns of Phytoplankton: Specific Activity of Different Product Pools,
W86-05176 5A

Phytoplankton Productivity in Turbid Waters,
W86-05177 5C

Comparison of Carbon-Specific Growth Rates and Rates of Cellular Increase of Phytoplankton in Large Limnetic Enclosures,
W86-05178 2H

Seasonal Fluctuations in the Biomass and Metabolic Activity of Bacterioplankton and Phytoplankton in a Well-Mixed Estuary: the Ems-Dollard (Wadden Sea),
W86-05181 2L

Regulation of Bacterial Secondary Production in Two Eutrophic Lakes and in Experimental Enclosures,
W86-05186 5C

PHYTOTOXICITY
Effect of River Water on Phytotoxicity of Ba, Cd and Cr,
W86-05101 5C

PIKE
Impact of Pulp and Paper Mill Effluent on Egg Hatchability of Pike (Esox lucius L.),
W86-04963 5C

PILOT PLANTS
Method for Evaluation and Procurement of In-Vessel Composting Systems,
W86-04741 5D

Field Evaluation of Arsenic and Selenium Removal by Iron Coprecipitation,
W86-05015 5D

PINE TREES
Soil and Slash Pine Response to Sludge Applications in Florida,
W86-05127 5E

Effect of Airborne Sulphur and Nitrogen Deposition on Aquatic and Terrestrial Heathland Vegetation,
W86-05416 5B

PIPELINES
Sludge Management Goes the Distance,
W86-05121 5E

PLANKTON
Measure of Plankton Community Similarity Utilizing Variable Weighting of Total Density and Taxonomic Proportionality,
W86-05160 2H

Chemical and Biological Changes in Model Ponds Supplied with Post-Waste Water: III. Plankton, Periphyton, Benthos,
W86-05196 5D

PLANT PHYSIOLOGY
Studies of Diurnal Acid Fluctuations in British Isoetid-type Submerged Aquatic Macrophytes,
W86-05064 5C

PLANT WATER POTENTIAL
Water Relations of Chromium VI Treated Bush Bean Plants (Phaseolus vulgaris) L. cv. Contender) under both Normal and Water Stress Conditions,
W86-04701 5C

PLANTS
Germination of Ten Shoreline Plants in Relation to Seed Size, Soil Particle Size and Water Level: An Experimental Study,
W86-04694 2I

PLASTIC PIPES
Water is the Key to Municipal Growth,
W86-04734 6D

PLASTICS
Plastic Lining on Riverton Unit, Wyoming,
W86-05240 8G

PLATE SEPARATION
Plate Separation - Budding Conventional Technology,
W86-05011 5D

PO RIVER
Analysis of a 24-Hour Cycle of Zooplankton Sampling in a Lagoon of the Po River Delta,
W86-05179 2L

POLAND
Detritus in the Littoral of Several Masurian Lakes (Sources and Fates),
W86-05189 5B

POLICY MAKING
Organic Contamination: Whistling Past the Graveyard,
W86-05014 5G

Estuarine, Coastal and Ocean Pollution: EEC Policy and Research,
W86-05352 5G

POLJES
Specific Hydrometry of Karst Regions,
W86-04812 2F

POLLUTANT IDENTIFICATION
Determination of Dicamba and 2,4-D in Water and Soil by Isotope Dilution GC/MS,
W86-04692 5A

Photometric Determination of Boron in Ground- and Surface Water (Photometrische Bestimmung von Bor Im Grund- und Oberflachenwasser),
W86-04707 5A

Gas-Chromatographic Elemental Analysis via Di(Trifluorethyl)Dithiocarbamato Chelates IX. Optimization of the Capillary-Gas-Chromatographic Determination of Trace Metals,
W86-04708 5A

Gas Chromatographic Evaluation of the Organic Components present in the Atmosphere at Trace Levels with the Aid of Carbopack B for Pre-Concentration of the Sample,
W86-04710 5A

Bromination and Gas Chromatographic Determination of Micro Amounts of Acrolein in Rain Water,
W86-04711 5A

Comparison of Direct Headspace and Aqueous Injection Techniques for Halogenated Hydrocarbons in Water,
W86-04712 5A

Metal-Binding Proteins as Metal Pollution Indicators,
W86-04763 5C

Simplified Method for the Extraction of the Metals Fe, Zn, Cu, Ni, Cd, Pb, Cr, Co and Mn from Soils and Sewage Sludges,
W86-05076 5A

Methyl Bromide in Surface Drinking Waters,
W86-05331 5A

Determination of the Percentage Adsorption of Unknown Organic Compounds from Water with a Multi-Column Technique,
W86-05332 5A

Evaluation of the Toxic Components of Toxaphene in Lake Michigan Lake Trout,
W86-05400 5A

POLLUTANTS
Heavy Metals in Rain Water Collected Over the Reservoirs at Kozlowa Gora and Goczalkowice,
W86-05195 5B

Alternative Aluminium Flocculants Controlling Micropollutants,
W86-05404 5F

POLLUTION
Mersey Estuary Pollution Alleviation Scheme,
W86-05304 5D

POLLUTION LOAD
Analysis of the Inshore Macrozoobenthic Community in Lake Naini Tal, UP, India,
W86-05172 2H

POLLUTION LOADS
Temporal and Spatial Trends in Metal Loadings to Sediments of the Turkey Lakes, Ontario,
W86-05346 5B

POLYCHLORINATED BIPHENYLS
Biogeochemistry of PCBs in Interstitial Waters of a Coastal Marine Sediment,
W86-05292 5B

Bioassay System for Industrial Chemical Effects on the Waste Treatment Process: PCB Interactions,
W86-05312 5D

POLYELECTROLYTES
Effects of Synthetic Polyelectrolytes on Selected Aquatic Organisms,
W86-05050 5C

POLYVINYL CHLORIDE PIPE
Water is the Key to Municipal Growth,
W86-04734 6D

PONDS
Chemical and Biological Changes in Model Ponds Supplied with Post-Waste Water: III. Plankton, Periphyton, Benthos,
W86-05196 5D

Enteric Luminous Microflora of the Pond-Cultured Milk Fish Chanos chanos (Forskal),
W86-05204 2H

PONORS
Specific Hydrometry of Karst Regions,
W86-04812 2F

POPULATION DYNAMICS
Seasonal Dynamics of Skistodiaptomus pallidus Herrick and Other Zooplankton Populations in Deer Lake, S. W. British Columbia,
W86-05180 2H

POROUS MEDIA
Second-Order Approach for the Modeling of Dispersive Transport in Porous Media: 1. Theoretical Development,
W86-05205 5B

Second-Order Approach for the Modeling of Dispersive Transport in Porous Media: 2. Application to Solute Motion in Pipes and Capillary Tubes,
W86-05206 5B

Velocity Effects on Dispersion in Porous Media with a Single Heterogeneity,
W86-05252 5B

PORTLAND CEMENTS
Leaching Tests of Heavy Metals Stabilized with Portland Cement,
W86-05054 5E

PORTSMOUTH
Salvaging a Water Reservoir,
W86-04739 8A

POTABLE WATER
Uses of Ozone in Water Treatment -- A Review,
W86-04955 5F

Disinfection for Potable Reuse,
W86-05048 5F

Application of Ozone for Water Treatment in the United Kingdom Current Practice and Recent Research,
W86-05059 5F

POTASSIUM
Potassium Losses in Runoff and Drainage Waters from Cropped, Large-scale Lysimeters,
W86-05388 5B

POWER FUNCTIONS
Height and Speed of Capillary Rise of Water in Medium Loam Soils,
W86-04730 2G

POWER HEAD
Application of Functional Analysis to Optimization of a Variable Head Multireservoir Power System for Long-Term Regulation,
W86-05242 8C

POWERHOUSE
Underground Works at Kenya's Kiambere Project,
W86-05006 8A

POWERPLANTS
Innovative Design Overcomes Multiple Institutional Barriers at Hydro Plant,
W86-04682 8C

PRECIPITATION
Solution to Residential Sewer Backups,
W86-04686 5D

Automated Ion Chromatographic Determination of Anions In Precipitation Samples,
W86-04984 5A

World's Highest Dam Conquers Harsh Environment,
W86-05002 8D

Two-Wavelength (0.86 cm and 3.2 cm) Radar Observation of Microphysical Process in Stratiform Precipitation Part I. Attenuation of Radar Wave Due to Precipitation Particles and Correction Method,
W86-05091 2B

Two-Wavelength (0.86 cm and 3.2 cm) Radar Observation of Microphysical Process in Stratiform Precipitation Part II. Study on Size Distribution Change of Precipitation Particles,
W86-05092 2B

New Technique for Monitoring the Water Vapor in the Atmosphere,
W86-05097 2B

Time Variation of Rn 222 Progeny Concentrations in Rainwater,
W86-05142 2B

Heavy Metals in Rain Water Collected Over the Reservoirs at Kozlowa Gora and Goczalkowice,
W86-05195 5B

State Estimation of a Scalar Dynamic Precipitation Model from Time-Aggregate Observations,
W86-05220 2B

Seasonal and Regional Variability of Parameters for Stochastic Daily Precipitation Models: South Dakota, U.S.A.,
W86-05257 2B

PRECIPITATION FORECASTING
Yes, Precipitation Forecasts have Improved,
W86-05070 2B

PREDICTION
Prediction of the Toxicity of Copper to Australian Freshwater Animals,
W86-04777 5C

Proposed Method for Accurately Calculating Sediment Yields from Reservoir Deposition Volumes,
W86-04913 2J

PRESSURE REGULATOR VALVE
Jones Fork Small Hydro Scheme,
W86-04727 8C

PRESSURE SHAFTS
Underground Works at Kenya's Kiambere Project,
W86-05006 8A

PRETREATMENT OF WATER
Pretreatment by the Metal Finishing Industry,
W86-05012 5D

PRICING
Water Demand Estimation Under Block Rate Pricing: A Simultaneous Equation Approach,
W86-05243 6D

PRIMARY PRODUCTIVITY
Photosynthetic Production of a Brackish Water Community of Chara Tomentosa L. and Its Dependence on Environmental Conditions,
W86-05151 2C

Primary Production and Effects of Enrichment with Nitrate and Phosphate on Phytoplankton in the Barra Bonita Reservoir (State of Sao Paulo, Brazil),
W86-05157 5C

Phytoplankton Productivity in Turbid Waters,
W86-05177 5C

PRIMARY SLUDGE
Performance of SBR/Denitrification with a Primary Sludge Carbon Source,
W86-05035 5D

Kinetics and Stoichiometry of SBR/Denitrification with a Primary Sludge Carbon Source,
W86-05036 5D

PRIORITY POLLUTANTS
Comparative Removal of Toxic Pollutants by Six Wastewater Treatment Processes,
W86-05016 5D

Adsorption of Organic Pollutants on Montmorillonite Treated with Amines,
W86-05022 5F

Oxidation of 2-Chlorophenol Using Ozone and Ultraviolet Radiation,
W86-05057 5D

PROBABILISTIC PROCESS
Disjunctive Kriging: 1. Overview of Estimation and Conditional Probability,
W86-05207 6A

Disjunctive Kriging: 2. Examples,
W86-05208 6A

PROCESS CONTROL
Influence of Different Substrate pH Values on the Performance of a Downflow Anaerobic Fixed Bed Reactor Treating a Petrochemical Effluent,
W86-04744 5D

Feedforward Control of a Wastewater Plant,
W86-05335 5D

PROCUREMENT
Method for Evaluation and Procurement of In-Vessel Composting Systems,
W86-04741 5D

PRODUCTIVITY
Epipelic Algal Flora of the River Wye System, Wales, UK. 1. Productivity and Total Biomass Dynamics,
W86-05158 2H

PROGRADATION
Morphology of a Delta Prograding by Bulk Sediment Transport,
W86-04702 2J

PROJECT PLANNING
Significance of Environmental Impacts: an Explorarion of the Concept,
W86-05410 6G

PROTEIN
Cadmium-Binding Protein (Metallothionein) in Carp,
W86-04757 5C

PROTEINS
Occurrence of Cadmium in Crabs (Cancer pagurus) and the Isolation and Properties of Cadmium Metallothionein,
W86-04756 5A

Copper-Binding Proteins in Liver of Bluegills Exposed to Increased Soluble Copper under Field and Laboratory Conditions,
W86-04758 5C

Cadmium Accumulation and Protein Binding Patterns in Tissues of the Rainbow Trout, Salmo gairdneri,
W86-04759 5C

Transition Metal-Binding Proteins from Three Chesapeake Bay Fish Species,
W86-04760 5C

Metal-Binding Proteins as Metal Pollution Indicators,
W86-04763 5C

PROTOZOA
Method for Enumerating Protozoa in a Variety of Freshwater Habitats,
W86-05201 5A

PUBLIC HEALTH
Health Effects and Risks from Rn222 in Drinking Water,
W86-05143 5C

Public Health Significance Of Industrial Pollution In Zaria, Nigeria,
W86-05301 5C

PUBLIC OPINION
Informational/Educational Approaches to Public Attitudes on Potable Reuse of Wastewater,
W86-04827 5D

PUBLIC PARTICIPATION
Organic Contamination: Whistling Past the Graveyard,
W86-05014 5G

PUBLIC RELATIONS
Informational/Educational Approaches to Public Attitudes on Potable Reuse of Wastewater,
W86-04827 5D

Public Relations Ploys Have Transformed Regulatory Issue into Consumer Concern,
W86-05058 6E

PUBLICLY OWNED TREATMENT WORKS
Improving POTW Performance Using the Composite Correction Program Approach: Handboodk,
W86-04830 5D

PUEBLO
Water is the Key to Municipal Growth,
W86-04734 6D

PULP AND PAPER INDUSTRY
Impact of Pulp and Paper Mill Effluent on Egg Hatchability of Pike (Esox lucius L.),
W86-04963 5C

PUMP-TURBINES
Electro-Mechanical Equipment for the Kalayaan Pumped-Storage Plant,
W86-04999 8C

PUMP WELLS
Submersible Pumps Help Improve Water Supply from Deep Limestone Well,
W86-05320 8C

PUMPED STORAGE
Entrainment Descriptions for Mathematical Modeling of Pumped-Storage Inflows in Reservoirs,
W86-04940 8B

Seawater Pumped-Storage Scheme Under Study in Japan,
W86-04995 8C

Bath County: The World's Largest Pumped-Storage Plant Commissioned,
W86-04996 8C

Scale Model Tests for Austria's Kuhtai Pumped-Storage Plant,
W86-04997 8C

Construction of Czechoslovakia's Dlouhe Strane Project,
W86-04998 8C

Electro-Mechanical Equipment for the Kalayaan Pumped-Storage Plant,
W86-04999 8C

Construction of Spain's Cortes-La Muela Scheme,
W86-05000 8C

Techniques for Soviet Pumped-Storage Plant Construction,
W86-05003 8C

PUMPING
Submersible Pumps Help Improve Water Supply from Deep Limestone Well,
W86-05320 8C

PUMPING PLANTS
Simplicity is Mark of Pump Station in the Round,
W86-05120 8C

PUMPING TESTS
Analysis of Flow to a Large-Diameter Well During the Recovery Period,
W86-05401 4B

PUMPS
Submersible Propeller Pump as an Alternative to the Tubular Axial Flow Pump,
W86-04986 8C

Submersible Pumps Help Improve Water Supply from Deep Limestone Well,
W86-05320 8C

QUASIPARTICLE MODELS
Sorption of Trace Metals by Humic Materials in Soils and Natural Waters,
W86-04715 5B

QUEBEC
Geologic Control on Soil Composition and Properties, Lake Ojibway Clay Plain, Matagami, Quebec.
W86-05103 2G

Migration Patterns of an Asymmetric Meandering River: The Rouge River, Quebec,
W86-05219 2E

RADAR
Two-Wavelength (0.86 cm and 3.2 cm) Radar Observation of Microphysical Process in Stratiform Precipitation Part I. Attenuation of Radar Wave Due to Precipitation Particles and Correction Method,
W86-05091 2B

Two-Wavelength (0.86 cm and 3.2 cm) Radar Observation of Microphysical Process in Stratiform Precipitation Part II. Study on Size Distribution Change of Precipitation Particles,
W86-05092 2B

Achieving Improved Frequency Response of the Rain Structure from Spaceborne Radar Altimeters by Employing Deconvolution Methods,
W86-05098 2B

Accuracy of Rainfall Estimates by Radar, Part I: Calibration by Telemetering Raingauges,
W86-05109 2B

Accuracy of Rainfall Estimates by Radar, Part II: Comparison with Raingauge Network,
W86-05110 2B

Accuracy in Rainfall Estimates by Radar, Part III: Application for Short-Term Flood Forecasting,
W86-05111 2B

RADIOACTIVE SPRINGS
Radioactivity of Spas on the Greek Island Ikaria and Influencing Factors,
W86-04691 2K

RADIOACTIVE TRACERS
Flood Flow Gauging with Tritium in Southern Africa,
W86-04796 7B

Identification and Quantification of Sediment Sources Using 137-Cs,
W86-04931 2J

RADIOACTIVE WASTE DISPOSAL
Practical Applications of Geological Methods at the West Valley Low-Level Radioactive Waste Burial Ground, Western New York,
W86-05138 5E

Simulation of Fluid Flow and Energy Transport Processes Associated with High-Level Radioactive Waste Disposal in Unsaturated Alluvium,
W86-05223 5E

RADIOACTIVITY
Occurence of Radioactivity in Public Water Supplies in the United States,
W86-05407 5B

RADIOISOTOPES
Contamination of Firn Layers by Radioactive Fission Products from Atmospheric Fallout,
W86-05141 5B

RADIOMETRY
Relation Between L-Band Soil Emittance and Soil Water Content,
W86-04688 7B

Satellite Thermal Observation of Oil Slicks on the Persian Gulf,
W86-04689 7B

RADON
Occurence of Radioactivity in Public Water Supplies in the United States,
W86-05407 5B

RADON RADIOISOTOPES
Time Variation of Rn 222 Progeny Concentrations in Rainwater,
W86-05142 2B

Health Effects and Risks from Rn222 in Drinking Water,
W86-05143 5C

RAIN
Gas Chromatographic Evaluation of the Organic Components present in the Atmosphere at Trace Levels with the Aid of Carbopack B for Pre-Concentration of the Sample,
W86-04710 5A

Bromination and Gas Chromatographic Determination of Micro Amounts of Acrolein in Rain Water,
W86-04711 5A

Two-Wavelength (0.86 cm and 3.2 cm) Radar Observation of Microphysical Process in Stratiform Precipitation Part I. Attenuation of Radar Wave Due to Precipitation Particles and Correction Method,
W86-05091 2B

Two-Wavelength (0.86 cm and 3.2 cm) Radar Observation of Microphysical Process in Stratiform Precipitation Part II. Study on Size Distribution Change of Precipitation Particles,
W86-05092 2B

Achieving Improved Frequency Response of the Rain Structure from Spaceborne Radar Altimeters by Employing Deconvolution Methods,
W86-05098 2B

Rainwater for Drinking in Sri Lanka,
W86-05145 3B

RAIN COMPOSITION
Use of Rain and Dry Deposition Compositions for Interpreting Ground-Water Chemistry,
W86-05394 2K

RAIN GAGES
Accuracy of Rainfall Estimates by Radar, Part II: Comparison with Raingauge Network,
W86-05110 2B

Accuracy in Rainfall Estimates by Radar, Part III: Application for Short-Term Flood Forecasting,
W86-05111 2B

RAINFALL
Satellite Data as Basis for the Estimation of Rainfall and Runoff,
W86-04809 7B

Rainfall Investigations at Cardington and Winchcombe 1954-67,
W86-05045 2B

Effect of Qinghai-Tibet Plateau Forcing on the Meso-Scale Rain-Bearing Circulation systems over Eastern China during Presummer Rainy Season,
W86-05090 2B

Accuracy of Rainfall Estimates by Radar, Part I: Calibration by Telemetering Raingauges,
W86-05109 2B

Accuracy of Rainfall Estimates by Radar, Part II: Comparison with Raingauge Network,
W86-05110 2B

Accuracy in Rainfall Estimates by Radar, Part III: Application for Short-Term Flood Forecasting,
W86-05111 2B

Time Variation of Rn 222 Progeny Concentrations in Rainwater,
W86-05142 2B

Overland Flow Hydrographs for SCS Type II Rainfall,
W86-05239 2E

Binary Time Series Obtained from Continuous Time Point Processes Describing Rainfall,
W86-05249 2B

RAINFALL IMPACT
Determination of the Parameters of Water Intake by Soil With the Energy Characteristics of Rain Taken into Account,
W86-04732 2G

Instrumentation for Studies of the Erosive Power of Rainfall,
W86-04881 7B

Effects of Moisture on Soil Microorganisms and Nematodes: A Field Experiment,
W86-05203 2G

RAINFALL RATE
New Method for Obtaining a Spatially Averaged Infiltration Rate from Rainfall and Runoff Rates,
W86-05074 2G

RAINFALL-RUNOFF RELATIONSHIPS
Haddington Flood Warning System,
W86-04808 7B

Gully Hydrology and Related Soil Properties in Lesotho,
W86-04911 2E

Observational Rainfall-Runoff Analysis for Estimating Effects of Cloud Seeding on water Resources in Northern Israel,
W86-05115 3B

Hydrologic Characteristics and Modelling of a Small Forested Catchment in Southeastern New South Wales. Pre-Logging Condition,
W86-05116 2E

Drainage from a Uniform Soil Layer on a Hillslope,
W86-05209 2E

Overland Flow Hydrographs for SCS Type II Rainfall,
W86-05239 2E

RAINFALL SIMULATORS
Soil Erosion Under Simulated Rainfall in the Field and Laboratory: Variability of Erosion Under Controlled Conditions,
W86-04882 2J

Laboratory and Field Testing of a Programmable Plot-Sized Rainfall Simulator,
W86-04883 2J

Outdoor Portable Rainfall Erosion Laboratory,
W86-04884 7B

RAINGAGES
Accuracy of Rainfall Estimates by Radar, Part I: Calibration by Telemetering Raingauges,
W86-05109 2B

RAPID INFILTRATION
Rapid Infiltration,
W86-04841 5D

RATE STRUCTURES
Summer Discount Methods in Sanitary Sewer Rate Structures,
W86-04684 6C

REAERATION COEFFICIENT
Reaeration Rate Estimation Using the Lag in Dissolved Oxygen Concentration,
W86-05060 2E

RECHARGE
Determination of the Soil Water Budget From Suction Pressure Curves,
W86-04731 2G

Soil Water Movement and Recharge Through Sand at a Semiarid Site in New Mexico,
W86-05247 2G

RECHARGE BASINS
Analytical Solutions for Strip Basin Recharge to Aquifers with Cauchy Boundary Conditions,
W86-05108 2F

RECREATION
Ingenuity Solves the City's Drainage and Recreational Space Needs,
W86-04737 4A

Phosphorus Removal at the Lower Molongo Water Quality Control Centre,
W86-05081 5D

RECYCLING
Recycling – Key to One Steel Mill's Pollution Control,
W86-04956 5D

Sanitary Landfill Leachate Recycle,
W86-04971 5E

Omaha Moves From 'Dispose All' To Management,
W86-04974 5E

Blast Furnace Recycle Water Quality and Reactions of Lead and Zinc,
W86-05056 5F

REFLECTANCE
Achieving Improved Frequency Response of the Rain Structure from Spaceborne Radar Altimeters by Employing Deconvolution Methods,
W86-05098 2B

REGIONAL VARIATION
Seasonal and Regional Variability of Parameters for Stochastic Daily Precipitation Models: South Dakota, U.S.A.,
W86-05257 2B

REGRESSION ANALYSIS
Practical Guidelines for the Use of Zooplankton Length-Weight Regression Equations,
W86-05182 2H

REGULATIONS
Estimating Risk to Human Health,
W86-04977 5B

REHABILITATION
Salvaging a Water Reservoir,
W86-04739 8A

Evaluation of High Density Cross Flow Media for Rehabilitating an Existing Trickling Filter,
W86-05031 5D

RELIABILITY
Confirmation of the Water Quality Model CE-QUAL-R1 Using Data from Eau Galle Reservoir, Wisconsin,
W86-04941 5B

REMEDIES
Remedial Action at Waste Disposal Sites (Revised): Handbook.
W86-04820 5D

REMOTE SENSING
Relation Between L-Band Soil Emittance and Soil Water Content,
W86-04688 7B

Satellite Thermal Observation of Oil Slicks on the Persian Gulf,
W86-04689 7B

Satellite Data as Basis for the Estimation of Rainfall and Runoff,
W86-04809 7B

REPRODUCTION
Effect of Fluorides on Survival and Reproduction of Daphnia Magna,
W86-05024 5C

RESEARCH PRIORITIES
Advanced Hydrologic Instrumentation Activities within the Water Resources Division of the US Geological Survey,
W86-04815 7B

Estuarine, Coastal and Ocean Pollution: EEC Policy and Research,
W86-05352 5G

RESERVOIR CAPACITY
Effect of Serial Correlation on Reservoir Size,
W86-05253 2H

RESERVOIR CONSTRUCTION
Salvaging a Water Reservoir,
W86-04739 8A

RESERVOIR SILTING
Proposed Method for Accurately Calculating Sediment Yields from Reservoir Deposition Volumes,
W86-04913 2J

RESERVOIRS
Entrainment Descriptions for Mathematical Modeling of Pumped-Storage Inflows in Reservoirs,
W86-04940 8B

Construction of Spain's Cortes-La Muela Scheme,
W86-05000 8C

Small Asynchronous Hydrogenerators and their Contribution to Energy Recovery in the Water Industry,
W86-05077 8C

Succession of Communities in the Goczalkowice Dam Reservoir in the Period 1955-1982,
W86-05084 2H

Primary Production and Effects of Enrichment with Nitrate and Phosphate on Phytoplankton in the Barra Bonita Reservoir (State of Sao Paulo, Brazil),
W86-05157 5C

Comparative Limnology of Several Reservoirs in Central India,
W86-05164 5C

Limnological Observations on Rihand Reservoir (Uttar Pradesh) with Reference to the Physical and Chemical Parameters of its Water,
W86-05165 2H

Heavy Metals in Rain Water Collected Over the Reservoirs at Kozlowa Gora and Goczalkowice,
W86-05195 5B

Application of Functional Analysis to Optimization of a Variable Head Multireservoir Power System for Long-Term Regulation,
W86-05242 8C

Synopsis of Analytic Solutions for the Temperature Distribution in a River Downstream from a Dam or Reservoir,
W86-05258 5B

RESIDUAL CHLORINE
Bench Testing of On-line Total Residual Chlorine Analyzers,
W86-05069 5A

RESISTIVITY
On-Site Assessment of Rock Discontinuities from Resistivity Logs. T-L Log: A New Logging Technique,
W86-05113 8E

RESOURCES DEVELOPMENT
Papago Water Supply Project: Class III Archaeological Survey for Schuk Toak and San Xavier Districts; Research Design,
W86-04817 6G

RESPIRATION
Photosynthetic Production of a Brackish Water Community of Chara Tomentosa L. and Its Dependence on Environmental Conditions,
W86-05151 2C

RETENTION TIME
Distribution of Retention Times in Model Biological Filters Containing Packed Spheres,
W86-05329 5D

Methanogenic Digestion Using Mixed Substrate of Acetic, Propionic and Butyric Acids,
W86-05345 5D

REVERSE OSMOSIS
Economics of Membrane Treatment of Wastewaters Containing Firefighting Foam,
W86-04947 5D

Biotreated Coal Liquefaction Wastewater: Identification of Organics by Composite RO Membrane Concentration, HPLC, and GC/MS,
W86-04949 5D

Biofilm on Reverse Osmosis Membranes,
W86-05123 5D

Reverse Osmosis Modules for Water Desalination,
W86-05259 3A

RICE
Distribution of Carbofuran in a Rice-Paddy-Fish Microecosystem,
W86-04966 5B

RIHAND RESERVOIR
Limnological Observations on Rihand Reservoir (Uttar Pradesh) with Reference to the Physical and Chemical Parameters of its Water,
W86-05165 2H

RILL EROSION
Effect of Soil Characteristics on Erosion and Nutrient Loss,
W86-04908 2J

RISKS
Estimating Risk to Human Health,
W86-04977 5B

RIVER BASINS
Installation and Operation of a Bubble Gauge Network in the Mahakam River Basin, East Kalimantan, Indonesia,
W86-04800 7B

Developments in Hydrometry in Central America and Brazil,
W86-04813 7B

River Basins,
W86-04816 8I

Accuracy of Estimating Basin Denudation Processes from Suspended Sediment Measurements,
W86-04864 2J

Basin-Wide Impacts of Irrigation Efficiency,
W86-05236 3F

Roles Along the Rivers,
W86-05327 6E

RIVER BEDS
River Mechanics,
W86-04750 2J

Method for Uniformizing the Stage-Discharge Relations of Stable River Beds and Its Application,
W86-04790 7B

Equations for Estimating Discharge in Steep Channels with Coarse Bed Material,
W86-04791 2E

Long Term Prediction of the Extremes of River Bed Level Fluctuations,
W86-04909 2E

Morphological Investigations on the Lower Salzach River Downstream of Salzburg,
W86-04918 2J

RIVER DEE
River Dee Scheme and Intake Protection Systems,
W86-04732 5F

RIVER ENGINEERING
River Mechanics,
W86-04750 2J

RIVER FLOW
Migration Patterns of an Asymmetric Meandering River: The Rouge River, Quebec,
W86-05219 2E

RIVER LAGAN
Influence of an Artificial Hydraulic Regime on Water Quality in the Tidal River Lagan, Northern Ireland,
W86-05080 5G

RIVER MECHANICS
River Mechanics,
W86-04750 2J

RIVER MORPHOLOGY
Morphological Investigations on the Lower Salzach River Downstream of Salzburg,
W86-04918 2J

RIVER WYE
Epipelic Algal Flora of the River Wye System, Wales, UK. 1. Productivity and Total Biomass Dynamics,
W86-05158 2H

RIVERS
Freshwater Biological Monitoring,
W86-04767 5A

Performance of an Invertebrate Colonisation Sampler (S. Aaf.U.) in Biological Surveillance of Lowland Rivers,
W86-04769 5A

Biological Surveillance in Welsh Rivers for Water Quality and Conservation Assessment,
W86-04770 5A

Invertebrate Drift in the Biological Monitoring of Water Quality,
W86-04771 5A

Early Warning of Eutrophication in Rivers by Analysis of Periphyton Chlorophyll a,
W86-04772 5A

Flood Flow Gauging with Tritium in Southern Africa,
W86-04796 7B

Tracer Measurements in Lowland Rivers,
W86-04797 7B

Determination of the Accuracy of Water Level Observation,
W86-04801 7B

Automation of Daily Water Discharge Computation for Rivers with Different Regimes,
W86-04814 7C

Measurement of Bed Load in Rivers,
W86-04844 2J

Increased Bag Size Improves Helley-Smith Bed Load Sampler for Use in Streams with High Sand and Organic Matter Transport,
W86-04845 2J

Efficiency of Basket Type Bed Load Samplers,
W86-04846 2J

Development of a Sand Bed Load Sampler for the Yangtze River,
W86-04847 2J

Experimental Investigations on the Initiation of Bed Load Transport in Gravel Rivers,
W86-04848 2J

Development of Nuclear Sediment Concentration Gauges for Use on the Yellow River,
W86-04850 2J

Latest Achievements in the Development of Nuclear Suspended Sediment Gauges,
W86-04851 2J

In situ Measurements of Particulate Matter Transport in Rivers,
W86-04857 2J

Sediment Transport Sampling for Environmental Data Collection,
W86-04859 7B

Sediment Sampling in Rivers and Canals,
W86-04860 7B

Accuracy and Precision of Suspended Sediment Loads,
W86-04862 7C

Study of the Variability of Suspended Sediment Measurements,
W86-04863 7B

Sediment Measurement in the Yellow River,
W86-04871 2J

Measurement of Sediment Yield and Transport in Mountain Torrents in Japan,
W86-04872 2J

Morphological Investigations on the Lower Salzach River Downstream of Salzburg,
W86-04918 2J

Prediction of Sediment Yield for Mountainous Basins in Columbia, South America,
W86-04927 4D

Sediment Quality Related to Discharge in a Mineralized Region of Wales,
W86-04929 5B

Analysis of the Vertical Distribution of High Sediment Concentrations in the Yellow River and Studies of Methods of Observation,
W86-04936 2J

Health Hazards Associated with Windsurfing on Polluted Water,
W86-04943 5C

Hexabromobenzene and Its Debrominated Compounds in River and Estuary Sediments in Japan,
W86-04968 5B

Geochemistry and Deposition of (7)Be in River-Estuarine and Coastal Waters,
W86-05095 2K

Compound-Specific Determination of Arsenite at Sub-nanogram Concentrations in Freshwater and Seawater,
W86-05107 5A

Modelling of River Water Infiltration Using Oxygen-18 Data,
W86-05118 2F

Field and Laboratory Studies on Nile Phytoplankton in Egypt. I. Some Physical and Chemical Characteristics,
W86-05173 2H

Some Observations on Hochstetter's Frog in the Catchment of the Motu River, East Cape,
W86-05197 2H

Method for Enumerating Protozoa in a Variety of Freshwater Habitats,
W86-05201 5A

Synopsis of Analytic Solutions for the Temperature Distribution in a River Downstream from a Dam or Reservoir,
W86-05258 5B

RIVERTON UNIT
Plastic Lining on Riverton Unit, Wyoming,
W86-05240 8G

ROCK MATRICES
Measurement of Important Parameters Determining Aqueous Phase Diffusion Rates through Crystalline Rock Matrices,
W86-05297 5B

ROCK PROPERTIES
Design of Pervious Pressure Tunnels,
W86-05008 8A

ROCKFILL DAMS
World's Highest Dam Conquers Harsh Environment,
W86-05002 8D

ROCKS
On-Site Assessment of Rock Discontinuities from Resistivity Logs. T-L Log: A New Logging Technique,
W86-05113 8E

ROGUN DAM
World's Highest Dam Conquers Harsh Environment,
W86-05002 8D

ROOT ZONE
At the Root of the Matter,
W86-05122 5D

Chemical Reactions within Root Zone of Arid Zone Soils,
W86-05233 5B

ROSOCYANIN
Photometric Determination of Boron in Ground- and Surface Water (Photometrische Bestimmung von Bor Im Grund- und Oberflachenwasser),
W86-04707 5A

ROTATING BIOLOGICAL CONTACTOR
Energy Usage of Rotating Biological Contactor Facilities,
W86-05019 5D

ROUGE RIVER
Migration Patterns of an Asymmetric Meandering River: The Rouge River, Quebec,
W86-05219 2E

RUN-OF-RIVER
Small Hydro Cascade Developments in China,
W86-04723 8C

RUN-OF-RIVER HYDRO
Standard Design for Six Mini Hydro Sites in Indonesia,
W86-04725 8C

RUNNING WATERS
Invertebrate Drift in the Biological Monitoring of Water Quality,
W86-04771 5A

RUNOFF
Satellite Data as Basis for the Estimation of Rainfall and Runoff,
W86-04809 7B

Automation of Daily Water Discharge Computation for Rivers with Different Regimes,
W86-04814 7C

Recent Developments in the Explanation and Prediction of Erosion and Sediment Yield.
W86-04896 2J

Effects of Slope Length and Terracing on Runoff and Erosion on a Tropical Soil,
W86-04899 2E

Impacts of Soil Characteristics on Soil Erodibility,
W86-04900 2J

Variations in Runoff and Erosion Under Various Methods of Protection,
W86-04901 2J

Surface Flow and Erosional Processes in Semiarid Mesoscale Channels and Drainage Basins,
W86-04910 2J

Gully Hydrology and Related Soil Properties in Lesotho,
W86-04911 2E

Erosional Processes and Sediment Yield in the Upper Oldman River Basin, Alberta, Canada,
W86-04916 4D

Sediment Dynamics in a Partially Cultivated Catchment in New South Wales, Australia,
W86-05114 2J

Drainage from a Uniform Soil Layer on a Hillslope,
W86-05209 2E

RUNOFF FORECASTING
Monte Carlo Simulation of Snow Depth in a Forest,
W86-05244 2C

RUNOFF RATE
New Method for Obtaining a Spatially Averaged Infiltration Rate from Rainfall and Runoff Rates,
W86-05074 2G

SAGUENAY RIVER
Influence of Copper in Various Forms on Natural Phytoplanktonic Populations from the Saguenay River, Quebec, Canada. (Influence de la Speciation du Cuivre sur les Populations Phytoplanctoniques Naturelles de la Riviere du Saguenay, Quebec, Canada.),
W86-05162 5C

SALINE-FRESHWATER INTERFACES
Dynamics of a Tidal Estuary: Estimation of the Principal Factors. (Estimation des Parametres Fondamentaux de la Dynamique d'un Estuaire a Marees),
W86-05170 2L

SALINE SOILS
Evaporite Mineralogy Associated with Saline Seeps in Southwestern North Dakota,
W86-05128 3C

SALINE WATER
Simulated Crop-Water Production Functions for Several Crops When Irrigated with Saline Waters,
W86-04690 3C

Optimal Ratios of Saline and Nonsaline Irrigation Waters for Crop Production,
W86-05126 3C

Drainage Required to Manage Salinity,
W86-05232 3F

SALINE WATER INTRUSION
Salinity Intrusion in the Eastmain River Estuary Following a Major Reduction of Freshwater Input,
W86-05096 2L

SALINITY
Some Observations on the Effects of Salinity on Ion Distributions and Cell Ultrastructure in Wheat Leaf Mesophyll Cells,
W86-04699 3C

Tracking Salty Soil, Saving Fresh Water,
W86-04982 3C

Chemical Reactions within Root Zone of Arid Zone Soils,
W86-05233 5B

Salt Problems from Increased Irrigation Efficiency,
W86-05234 5B

SALMON
Juvenile Anadromous Atlantic Salmon of Three Lakes of Newfoundland,
W86-05163 2H

SALMONELLA ASSAY
Screening Complex Hazardous Wastes for Mutagenic Activity using a Modified Version of the TLC/Salmonella Assay,
W86-04709 5A

SALT MARSHES
Evolution of Bacterial Populations in Salt Marsh Sediments of Ile Grande Polluted by Amoco Cadiz. (Evolution des Populations Bacteriennes dans les Sediments des Marais Maritimes de l'Ile Grande Pollues par l'Amoco Cadiz,).
W86-05167 5C

SAMPLING
Measurement of Bed Load in Rivers,
W86-04844 2J

Increased Bag Size Improves Helley-Smith Bed Load Sampler for Use in Streams with High Sand and Organic Matter Transport,
W86-04845 2J

Efficiency of Basket Type Bed Load Samplers,
W86-04846 2J

Development of a Sand Bed Load Sampler for the Yangtze River,
W86-04847 2J

Analysis of a Simple Suspended Load Integrating Sampler,
W86-04854 2J

Recent Developments in Pump Samplers for the Measurement of Sand Transport,
W86-04855 2J

Field Measurements of Suspended Sediment Concentration in the Surf Zone,
W86-04856 2J

In situ Measurements of Particulate Matter Transport in Rivers,
W86-04857 2J

Sediment Measurement Techniques Used by the Soil Conservation Service of New South Wales, Australia,
W86-04858 2J

Sediment Transport Sampling for Environmental Data Collection,
W86-04859 7B

Sediment Sampling in Rivers and Canals,
W86-04860 7B

Reliability of Suspended Sediment Load Data,
W86-04861 7C

Accuracy and Precision of Suspended Sediment Loads,
W86-04862 7C

Study of the Variability of Suspended Sediment Measurements,
W86-04863 7B

Measurement of Sediment Yield and Transport in Mountain Torrents in Japan,
W86-04872 2J

Measurement of Suspended Sediment and Bed Load in Sand Bed Channels and the Associated Problems,
W86-04873 2J

Significance, Measurement, and Analysis of Sediment Discharges of Flashy Streams,
W86-04874 2J

Soil Water Extractor that Minimizes CO2 Degassing and pH Errors,
W86-05246 2G

SAN DIEGO
Sludge Management Alternatives for San Diego,
W86-04718 5E

SAND
Recent Developments in Pump Samplers for the Measurement of Sand Transport,
W86-04855 2J

Soil Water Movement and Recharge Through Sand at a Semiarid Site in New Mexico,
W86-05247 2G

NTA Biodegradation and Removal in Subsurface Sandy Soil,
W86-05339 5B

SAND AQUIFERS
Groundwater Flow and Sand Body Interconnectedness in a Thick, Multiple-Aquifer System,
W86-05214 2F

SAND FILTERS
Phosphorus Transformation in a Rapid Infiltration Column,
W86-05139 5D

Algae Removal by Fine Sand/Silt Filtration,
W86-05344 5F

SAND QQUIFERS
In-Situ Study of the Occurrence and Rate of Denitrification in a Shallow Unconfined Sand Aquifer,
W86-05112 5B

SANITARY LANDFILLS
Sanitary Landfill Leachate Recycle,
W86-04971 5E

SANITARY WASTEWATER
Lift Station Design,
W86-04959 8A

SANITATION
Infectious Diseases and Field Water Supply and Sanitation Among Migrant Farm Workers,
W86-04944 5C

Evaluation of the Water Supply and Sanitation Problems in Nigeria,
W86-05300 5F

SAROTHERODON MOSSAMBICUS
Impairment of Thyroid Activity in Sarotherodon Mossambicus Due to DDT Treatment,
W86-05267 5B

SATELLITE TECHNOLOGY
Satellite Thermal Observation of Oil Slicks on the Persian Gulf,
W86-04689 7B

Satellite Data as Basis for the Estimation of Rainfall and Runoff,
W86-04809 7B

Towards a Satellite-Based Hydrometric Data Collection System,
W86-04810 7B

New Technique for Monitoring the Water Vapor in the Atmosphere,
W86-05097 2B

Achieving Improved Frequency Response of the Rain Structure from Spaceborne Radar Altimeters by Employing Deconvolution Methods,
W86-05098 2B

SATURATED SOILS
One-Dimensional Model of Chemical Diffusion and Sorption in Saturated Soil and Aquatic Systems,
W86-05390 5B

SATURATION ZONE
Prediction of Surface Saturation Zones in Natural Catchments by Topographic Analysis,
W86-05226 2E

SAVANNAH RIVER
Benthic Macroinvertebrate Community Structural and Functional Group Response to Thermal Enhancement in the Savannah River and a Coastal Plain Tributary,
W86-05089 5C

SCALLOPS
Cadmium-Binding Proteins in the Scallop Pecten maximus,
W86-04764 5C

SCHENECTADY
Method for Evaluation and Procurement of In-Vessel Composting Systems,
W86-04741 5D

SCOUR
Erosion and Recovery of Sediment Concentration in the River Channel Downstream from Danjiankou Reservoir,
W86-04912 2J

SCOUT-SEAL GROUT
Durable Chemical Grout Solves 'Case of the Disappearing Lake',
W86-04742 8A

SCUM
Plate Separation - Budding Conventional Technology,
W86-05011 5D

SEALANTS
Seawater Pumped-Storage Scheme Under Study in Japan,
W86-04995 8C

SEASONAL NITRIFICATION
Activated Sludge Control for Seasonal Nitrification,
W86-05030 5D

SEASONAL VARIATION
Influence of Season, Source and Distance on Physical and Chemical Properties of Suspended Sediment,
W86-04932 5B

Seasonal and Regional Variability of Parameters for Stochastic Daily Precipitation Models: South Dakota, U.S.A.,
W86-05257 2B

Seasonal and Diurnal Variation of Energy Budget Components in Coniferous Forests,
W86-05296 2D

SEBAGO LAKE
Monitoring Sebago Lake Water Quality Below the Thermocline,
W86-05027 5F

SECOND DERIVATIVE ULTRAVIOLET SPECTROSCOPY
Second Derivative Ultraviolet Spectroscopy and Sulfamic Acid Method for Determination of Nitrates in Water,
W86-05072 5A

SECONDARY WASTEWATER TREATMENT
Study of Operational Ultraviolet Disinfection Equipment at Secondary Treatment Plants,
W86-05047 5D

SEDIMENT
Surface Flow and Erosional Processes in Semiarid Mesoscale Channels and Drainage Basins,
W86-04910 2J

Identification and Quantification of Sediment Sources Using 137-Cs,
W86-04931 2J

Sediment Dynamics in a Partially Cultivated Catchment in New South Wales, Australia,
W86-05114 2J

Vertical Migration and Mortality of Marine Benthos in Dredged Material: A Synthesis,
W86-05169 5C

SEDIMENT CHARACTERISTICS
Sediment Quality Related to Discharge in a Mineralized Region of Wales,
W86-04929 5B

SEDIMENT CONCENTRATION
Erosion and Recovery of Sediment Concentration in the River Channel Downstream from Danjiankou Reservoir,
W86-04912 2J

SEDIMENT CONCENTRATION

Analysis of the Vertical Distribution of High Sediment Concentrations in the Yellow River and Studies of Methods of Observation,
W86-04936 2J

SEDIMENT DISCHARGE

Sediment Availability and the Prediction of Storm-Period Sediment Yields,
W86-04928 4D

SEDIMENT EROSION

Recent Developments in the Explanation and Prediction of Erosion and Sediment Yield.
W86-04896 2J

Sediment Production Under Various Forest-Site Conditions,
W86-04898 2J

Sediment Modelling and Data Sources: A Compromise in Assessment,
W86-04922 2J

SEDIMENT LOSS

Storm Flow and Sediment Losses from Site-Prepared Forestland in East Texas,
W86-05224 4C

SEDIMENT TRANSPORT

Morphology of a Delta Prograding by Bulk Sediment Transport,
W86-04702 2J

Erosion and Sediment Transport Measurement: Symposium.
W86-04843 2J

Measurement of Bed Load in Rivers,
W86-04844 2J

Increased Bag Size Improves Helley-Smith Bed Load Sampler for Use in Streams with High Sand and Organic Matter Transport,
W86-04845 2J

Efficiency of Basket Type Bed Load Samplers,
W86-04846 2J

Development of a Sand Bed Load Sampler for the Yangtze River,
W86-04847 2J

Experimental Investigations on the Initiation of Bed Load Transport in Gravel Rivers,
W86-04848 2J

Nuclear Techniques for Measuring Sediment Transport in Natural Streams, Examples From Instrumented Basins,
W86-04849 2J

Development of Nuclear Sediment Concentration Gauges for Use on the Yellow River,
W86-04850 2J

Latest Achievements in the Development of Nuclear Suspended Sediment Gauges,
W86-04851 2J

Continuous Measurement of Suspended Sediment in Rivers by Means of a Double Beam Turbidity Meter,
W86-04852 2J

Use of Turbidity Monitors to Assess Sediment Yield in East Java, Indonesia,
W86-04853 2J

Analysis of a Simple Suspended Load Integrating Sampler,
W86-04854 2J

Recent Developments in Pump Samplers for the Measurement of Sand Transport,
W86-04855 2J

Field Measurements of Suspended Sediment Concentration in the Surf Zone,
W86-04856 2J

In situ Measurements of Particulate Matter Transport in Rivers,
W86-04857 2J

Sediment Measurement Techniques Used by the Soil Conservation Service of New South Wales, Australia,
W86-04858 2J

Sediment Transport Sampling for Environmental Data Collection,
W86-04859 7B

Sediment Sampling in Rivers and Canals,
W86-04860 7B

Reliability of Suspended Sediment Load Data,
W86-04861 7C

Accuracy and Precision of Suspended Sediment Loads,
W86-04862 7C

Study of the Variability of Suspended Sediment Measurements,
W86-04863 7B

Accuracy of Estimating Basin Denudation Processes from Suspended Sediment Measurements,
W86-04864 2J

Techniques Applied in Determining Sediment Loads in South African Rivers,
W86-04865 2J

Measurement of Debris Flow and Sediment-Laden Flow Using a Conveyor-Belt Flume in a Laboratory,
W86-04866 7B

Some Problems Related to Sediment Transport Measurement in Steep Mountain Streams,
W86-04867 2J

Integrated Debris Flow Observations,
W86-04868 2J

Studies of Sediment Production on Mountain Slopes,
W86-04869 4D

New Methods of Measurement of Slow Particulate Processes on Hillside Slopes,
W86-04870 7B

Sediment Measurement in the Yellow River,
W86-04871 2J

Measurement of Sediment Yield and Transport in Mountain Torrents in Japan,
W86-04872 2J

Measurement of Suspended Sediment and Bed Load in Sand Bed Channels and the Associated Problems,
W86-04873 2J

Significance, Measurement, and Analysis of Sediment Discharges of Flashy Streams,
W86-04874 2J

Data Requirements for Sediment, Erosion and Transport Simulation,
W86-04876 7A

Upland Erosion: Evaluation and Measurement,
W86-04877 2J

Analyses of Different Processes Governing Soil Erosion by Water in the Tropics,
W86-04878 2J

Investigation of Source Areas of Sediment and Sediment Transport by Overland Flow Along Arid Hillslopes,
W86-04886 2J

Erosion and Sediment Transport Measurement in a Weathered Granite Mountain Area,
W86-04892 2J

Erosion and Sediment Transport Processes in Step-Pool Torrents,

Cadmium and Lead Cycling Between Water, Sediment, and Biota in an Artificially Contaminated Mud Flat on Borkum (F.R.G.),
W86-05365 5B

Distribution of Mercury in the Sediments and Fishes of the Lagoons of Aveiro, Portugal,
W86-05366 5B

Role of Speciation in Mercury Methylation in Sediments and Water,
W86-05395 5B

SEDIMENTS TRANSPORT
Sediment Dynamics in a Partially Cultivated Catchment in New South Wales, Australia,
W86-05114 2J

SEICHES
Climatology of Internal Waves in a Deep Temperate Lake,
W86-05100 2H

SELENASTRUM CAPRICORNUTUM
Growth and Photosynthetic Response of a Freshwater Alga, Selenastrum capricornutum, to an Oil Shale By-Product Water,
W86-05265 5C

SELENATE
Rapid Determination in Water of Chloride, Sulphate, Sulphite, Selenite, Selenate and Arsenate Among Other Inorganic and Organic Solutes by Ion Chromatography With UV Detection Below 195 nm,
W86-05302 5A

SELENITE
Rapid Determination in Water of Chloride, Sulphate, Sulphite, Selenite, Selenate and Arsenate Among Other Inorganic and Organic Solutes by Ion Chromatography With UV Detection Below 195 nm,
W86-05302 5A

SELENIUM
Field Evaluation of Arsenic and Selenium Removal by Iron Coprecipitation,
W86-05015 5D

SELF-PURIFICATION
Chemical and Biological Changes in Model Ponds Supplied with Post-Waste Water: III. Plankton, Periphyton, Benthos,
W86-05196 5D

SEMIARID LANDS
Soil Water Movement and Recharge Through Sand at a Semiarid Site in New Mexico,
W86-05247 2G

SENEGAL RIVER
Irrigation Water Requirements for Senegal River Basin,
W86-05238 6D

SEPARATION TECHNIQUES
Copper (2+), Zinc (2+), and Nickel (2+) Uptake by Activated Sludge,
W86-04755 5D

Design of Rapid Small-Scale Adsorption Tests for a Constant Diffusivity,
W86-05135 5D

PAC-Activated Sludge Treatment of a Steel Mill Coke-Plant Wastewater,
W86-05137 5D

NTA Biodegradation and Removal in Subsurface Sandy Soil,
W86-05339 5B

Algae Removal by Fine Sand/Silt Filtration,
W86-05344 5F

SEPTIC TANK EFFLUENT
Chemical Quality of Perched Septic Tank Effluent for Plant Use and Recharge,
W86-05311 5D

SEPTIC TANKS
Septage Treatment and Disposal: Handbook,
W86-04828 5D

NTA Biodegradation and Removal in Subsurface Sandy Soil,
W86-05339 5B

SEPTIC WASTEWATER
Septage Treatment and Disposal: Handbook,
W86-04828 5D

SEQUENCING BATCH REACTORS
Performance of SBR/Denitrification with a Primary Sludge Carbon Source,
W86-05035 5D

Kinetics and Stoichiometry of SBR/Denitrification with a Primary Sludge Carbon Source,
W86-05036 5D

Organic Loading Study Of Full-Scale Sequencing Batch Reactors,
W86-05308 5D

Technology Evaluation of Sequencing Batch Reactors,
W86-05309 5D

SETTLING FLUX THEORY
Relationship between SVI and Activated Sludge Settling Characteristics,
W86-05082 5D

SEWAGE BACTERIA
Comparison of Muller-Kauffmann Tetrathionate Broth with Rappaport-Vassiliadis (RV) Medium for the Isolation of Salmonellas from Sewage Sludge,
W86-04994 5A

SEWAGE SLUDGE
Simplified Method for the Extraction of the Metals Fe, Zn, Cu, Ni, Cd, Pb, Cr, Co and Mn from Soils and Sewage Sludges,
W86-05076 5A

SEWER INFILTRATION
Durable Chemical Grout Solves 'Case of the Disappearing Lake',
W86-04742 8A

SEWER SYSTEMS
Summer Discount Methods in Sanitary Sewer Rate Structures,
W86-04684 6C

Used Chassis Makes Sewer and Catch Basin Cleaner Affordable,
W86-04685 5D

Solution to Residential Sewer Backups,
W86-04686 5D

Using the Fecal Coliform Test for Sewer and Storm Drain Maintenance,
W86-04687 5D

Simplicity is Mark of Pump Station in the Round,
W86-05120 8C

SEWERS
Big Bucks Saved on Sewer Rehabilitation Project,
W86-04740 8A

SHEAR
Wind-Forced Motions in Stratified Lakes and Their Effect on Mixed-Layer Shear,
W86-05279 2H

SHEET RUNOFF
Development of Sheet Erosion on Intensively Used Soils,
W86-04905 2J

SHORELINE
Germination of Ten Shoreline Plants in Relation to Seed Size, Soil Particle Size and Water Level: An Experimental Study,
W86-04694 2I

SIERRA LEONE
Seasonality of Bacterial Quality of Water in a Tropical Developing Country (Sierra Leone),
W86-05106 5A

SILL
Hydraulics of Two Flowing Layers with Different Densities,
W86-04714 2E

SILT
Aspects of the Feeding Ecology of Turbin Water Zooplankton. In situ Studies of Community Filtration Rates in Silt-Laden Lake le Roux, Orange River, South Africa,
W86-05183 2H

SIMULATED RAINFALL
Permethrin Washoff from Cotton Plants by Simulated Rainfall,
W86-05385 5B

SIMULATION
Using Soil Survey Information to Characterize the Soil-Water State,
W86-04713 2G

Mathematical Simulation of Erosion on Graded Terraces,
W86-04919 4D

Field Validation of the Geohydrology Simulation Model, FEWA,
W86-05071 5B

SIMULATION ANALYSIS
Curvilinear Finite Element Model for Simulating Two-Well Tracer Tests and Transport in Stratified Aquifers,
W86-05213 2F

Simulation of Fluid Flow and Energy Transport Processes Associated with High-Level Radioactive Waste Disposal in Unsaturated Alluvium,
W86-05223 5E

Monte Carlo Simulation of Snow Depth in a Forest,
W86-05244 2C

SIMULTANEOUS EQUATIONS
Water Demand Estimation Under Block Rate Pricing: A Simultaneous Equation Approach,
W86-05243 6D

SINGLE PHASE ANAEROBIC FILTER
Recent Developments in Hydrogen Management During Anaerobic Biological Wastewater Treatment,
W86-04746 5D

SINGLET OXYGEN
Singlet Oxygen in Surface Waters. 3. Photochemical Formation and Steady-State Concentrations in Various Types of Waters,
W86-04720 2K

SINKHOLES
Durable Chemical Grout Solves 'Case of the Disappearing Lake',
W86-04742 8A

SLIP CIRCLE MODEL
Analysis of Stratigraphic Control on River Bank Failure,
W86-04748 4D

SLOPE EROSION
Rate of Erosion Processes on Experimental Areas in the Marchiazza Basin (Northwestern Italy),
W86-04888 4D

SLOPES
Studies of Sediment Production on Mountain Slopes,
W86-04869 4D

New Methods of Measurement of Slow Particulate Processes on Hillside Slopes,
W86-04870 7B

Investigation of Source Areas of Sediment and Sediment Transport by Overland Flow Along Arid Hillslopes,
W86-04886 2J

Rate of Erosion Processes on Experimental Areas in the Marchiazza Basin (Northwestern Italy),
W86-04888 4D

Establishment of Experimental Plots for Studying Runoff and Soil Loss in the Rolling Loess Regions of China,
W86-04889 2J

Drainage from a Uniform Soil Layer on a Hillslope,
W86-05209 2E

SLUDGE
Determination of Linear Alkylbenzenesulfonates in Sewage Sludge by High-Resolution Gas Chromatography/Mass Spectrometry,
W86-04721 5A

Filtrate and cake quality in sludge dewatering,
W86-04954 5E

Omaha Moves From 'Dispose All' To Management,
W86-04974 5E

Comparison of Muller-Kauffmann Tetrathionate Broth with Rappaport-Vassiliadis (RV) Medium for the Isolation of Salmonellas from Sewage Sludge,
W86-04994 5A

Field Evaluation of Arsenic and Selenium Removal by Iron Coprecipitation,
W86-05015 5D

Design and Performance of a Groundwater Treatment System for Toxic Organic Removal,
W86-05018 5G

Evaluation of Nitrogen Availability Indexes for a Sludge Compost Amended Soil,
W86-05386 5E

Prediction of Available Zinc in Sewage Sludge-amended Soils,
W86-05387 5E

SLUDGE COMBUSTION
Use and Disposal of Municipal Wastewater Sludge,
W86-04826 5D

Municipal Wastewater Sludge Combustion Technology.
W86-04835 5D

Sludge Incineration Facilities,
W86-04836 5D

Improving Sludge Incineration Methods,
W86-04837 5D

Cocombustion of Sludge and Solid Wastes,
W86-04838 5D

Emerging Technology,
W86-04839 5D

SLUDGE CONDITIONING
Accuracy and Precision of Plant Scale and Shop Clean Water Oxygen Transfer Tests,
W86-05132 5D

SLUDGE DISPOSAL
Evaluating the In-Vessel Composting Option, Part I,
W86-04716 5D

Denver's Dual Utilization Sludge Program,
W86-04717 5E

Sludge Management Alternatives for San Diego,
W86-04718 5E

Use and Disposal of Municipal Wastewater Sludge,
W86-04826 5D

Estimating Sludge Management Costs.
W86-04829 5D

Municipal Wastewater Sludge Combustion Technology.
W86-04835 5D

Sludge Incineration Facilities,
W86-04836 5D

Improving Sludge Incineration Methods,
W86-04837 5D

Cocombustion of Sludge and Solid Wastes,
W86-04838 5D

Emerging Technology,
W86-04839 5D

Environmental Aspects of the Combustion of Sewage Sludge in a Utility Boiler,
W86-04948 5E

Sludge Management Goes the Distance,
W86-05121 5E

Soil and Slash Pine Response to Sludge Applications in Florida,
W86-05127 5E

Monitoring and Evaluating Composting Process Performance,
W86-05130 5E

Municipal Sludge Composting Technology Evaluation,
W86-05131 5E

Land Application of Domestic Wastewater, Wood Production, and Sludge Composting: an Integrated Design,
W86-05293 3C

Availability of Applied Heavy Metals as a Function of Type of Soil Material and Metal Source,
W86-05299 5E

Mineralization of Nitrogen in Soils Amended with Organic Wastes,
W86-05391 5E

Alkylate Sludge Reuse Potential,
W86-05406 5E

SLUDGE DRYING
Estimating Sludge Management Costs.
W86-04829 5D

Water Content and Electric Potential Distributions in Gelatinous Bentonite Sludge with Electroosmotic Dewatering,
W86-05261 5D

SLUDGE EXCESS
Some Rheological Features of Concentrated Excess Activated Sludge of Thixotropic Nature,
W86-05262 5D

SLUDGE FILTERS
Limitations of Sludge Filtration Theory at Constant Vacuum Pressure,
W86-05287 5D

SLUDGE UTILIZATION
Alkylate Sludge Reuse Potential,
W86-05406 5E

SLUDGE VOLUME INDEX
Relationship between SVI and Activated Sludge Settling Characteristics,
W86-05082 5D

SMALL HYDRO
Economic Limits of Small and Low-Head Hydro,
W86-04724 6B

Jones Fork Small Hydro Scheme,
W86-04727 8C

Developing Small Hydro in India,
W86-04728 8C

SNAILS
Occurrence of Gastropoda in the Lake Littoral and Their Role in the Production and Transformation of Detritus I. Snails in the Littoral of Mikolajskie Lake -- General Characteristics of Occurrence,
W86-05190 2H

Occurrence of Gastropoda in the Lake Littoral and Their Role in the Production and Transformation of Detritus II. Ecological Activity of Snails,
W86-05191 2H

SNOW
World's Highest Dam Conquers Harsh Environment,
W86-05002 8D

Two-Wavelength (0.86 cm and 3.2 cm) Radar Observation of Microphysical Process in Stratiform Precipitation Part I. Attenuation of Radar Wave Due to Precipitation Particles and Correction Method,
W86-05091 2B

Two-Wavelength (0.86 cm and 3.2 cm) Radar Observation of Microphysical Process in Stratiform Precipitation Part II. Study on Size Distribution Change of Precipitation Particles,
W86-05092 2B

Experiments on Aerosol Scavenging by Natural Snow Crystals Part III. The Effect of Snow Crystal Charge on Collection Efficiency,
W86-05093 2C

SNOW DEPTH
Monte Carlo Simulation of Snow Depth in a Forest,
W86-05244 2C

SNOW SURVEYS
Monte Carlo Simulation of Snow Depth in a Forest,
W86-05244 2C

SODIUM HYDROXIDE
Influence of Different Substrate pH Values on the Performance of a Downflow Anaerobic Fixed Bed Reactor Treating a Petrochemical Effluent,
W86-04744 5D

SOFTWARE
Database Management,
W86-05010 7C

SOIL
Distribution of Carbofuran in a Rice-Paddy-Fish Microecosystem,
W86-04966 5B

SOIL AMENDMENTS
Availability of Applied Heavy Metals as a Function of Type of Soil Material and Metal Source,
W86-05299 5E

Mineralization of Nitrogen in Soils Amended with Organic Wastes,
W86-05391 5E

SOIL CHARACTERISTICS
Impacts of Soil Characteristics on Soil Erodibility,
W86-04900 2J

SOIL CHEMISTRY
Acid Rain - A Further Look at the Evidence,
W86-04704 5B

Sorption of Trace Metals by Humic Materials in Soils and Natural Waters,
W86-04715 5B

Possibility of Melioration and Agricultural use of Liman and Marine Sediments,
W86-04729 5G

SOIL CONTAMINATION
Determination of Dicamba and 2,4-D in Water and Soil by Isotope Dilution GC/MS,
W86-04692 5A

SOIL CREEP
New Methods of Measurement of Slow Particulate Processes on Hillside Slopes,
W86-04870 7B

SOIL DEVELOPMENT
Possibility of Melioration and Agricultural use of Liman and Marine Sediments,
W86-04729 5G

SOIL DISPOSAL FIELDS
Process Design Manual for Land Treatment of Municipal Wastewater: Supplement on Rapid Infiltration and Overland Flow.
W86-04840 5D

Overland Flow,
W86-04842 5D

SOIL EROSION
Upland Erosion: Evaluation and Measurement,
W86-04877 2J

Analyses of Different Processes Governing Soil Erosion by Water in the Tropics,
W86-04878 2J

Study of the Dynamics of Drop Erosion Under Laboratory Conditions,
W86-04879 2J

Field Measurement of Splash Erosion,
W86-04880 2J

Relationship Between Three Scales of Erosion Measurement on Two Small Basins in Sierra Leone,
W86-04891 2J

Land Erosion, Research Equipment, Forecasting Methods and Prospects for Their Improvement,
W86-04895 2J

Effects of Slope Length and Terracing on Runoff and Erosion on a Tropical Soil,
W86-04899 2E

Results of Recent Research on Erosion Processes in Hungary,
W86-04903 2J

Effect of Soil Characteristics on Erosion and Nutrient Loss,
W86-04908 2J

Soil Erosion and Agriculture in the World: An Assessment and Hydrological Implications,
W86-04923 4D

Estimation of Extreme Sediment Transport from Torrential Drainage Basins in the East Alps,
W86-04924 4D

SOIL LOSS
National Erosion Inventory of the Soil Conservation Service, US Department of Agriculture, 1977-1979,
W86-04875 7C

Portable Rill Meter for Field Measurement of Soil Loss,
W86-04890 7B

SOIL MANAGEMENT
Tracking Salty Soil, Saving Fresh Water,
W86-04982 3C

SOIL MECHANICS
Integrated Debris Flow Observations,
W86-04868 2J

Studies of Sediment Production on Mountain Slopes,
W86-04869 4D

New Methods of Measurement of Slow Particulate Processes on Hillside Slopes,
W86-04870 7B

Some Laboratory Techniques of Investigating Land Erosion,
W86-04885 2J

Field Measurements of Rates of Bank Erosion and Bank Material Strength,
W86-04893 7B

SOIL MOISTURE
Effects of Moisture on Soil Microorganisms and Nematodes: A Field Experiment,
W86-05203 2G

SOIL MORPHOLOGY
Using Soil Survey Information to Characterize the Soil-Water State,
W86-04713 2G

SOIL ORGANIC MATTER
Feedlot Manure Use on Desert Cropland,
W86-04973 5E

SOIL PHYSICAL PROPERTIES
Geologic Control on Soil Composition and Properties, Lake Ojibway Clay Plain, Matagami, Quebec.
W86-05103 2G

SOIL PROFILES
Evidence for Movement of Heavy Metals in a Soil Irrigated with Untreated Wastewater,
W86-05322 5E

SOIL SATURATION
Prediction of Surface Saturation Zones in Natural Catchments by Topographic Analysis,
W86-05226 2E

SOIL SOLUTION
Tracking Salty Soil, Saving Fresh Water,
W86-04982 3C

SOIL STABILITY
Recent Developments in the Explanation and Prediction of Erosion and Sediment Yield.
W86-04896 2J

Impacts of Soil Characteristics on Soil Erodibility,
W86-04900 2J

Variations in Runoff and Erosion Under Various Methods of Protection,
W86-04901 2J

SOIL SURVEY
Using Soil Survey Information to Characterize the Soil-Water State,
W86-04713 2G

SOIL TESTS
Evaluating Maturity and Metal Transfer of MSW Compost,
W86-04972 5E

SOIL TYPES
Chemical Reactions within Root Zone of Arid Zone Soils,
W86-05233 5B

Availability of Applied Heavy Metals as a Function of Type of Soil Material and Metal Source,
W86-05299 5E

Use of Dyes and Proteins as Indicators of Virus Adsorption to Soils,
W86-05330 5B

SOIL WATER
Relation Between L-Band Soil Emittance and Soil Water Content,
W86-04688 7B

Using Soil Survey Information to Characterize the Soil-Water State,
W86-04713 2G

Height and Speed of Capillary Rise of Water in Medium Loam Soils,
W86-04730 2G

Determination of the Soil Water Budget From Suction Pressure Curves,
W86-04731 2G

Determination of the Parameters of Water Intake by Soil With the Energy Characteristics of Rain Taken into Account,
W86-04732 2G

Groundwater Movement Studied,
W86-04983 2F

Determination of Saturated Hydraulic Conductivity from Soil Percolation Test Results,
W86-05124 2G

Investigation of Water Movement in the Unsaturated Zone Under an Irrigated Area using Environmental Tritium,
W86-05210 2G

Field Study of Napropamide Movement through Unsaturated Soil,
W86-05221 5B

Soil Water Extractor that Minimizes CO2 Degassing and pH Errors,
W86-05246 2G

Soil Water Movement and Recharge Through Sand at a Semiarid Site in New Mexico,
W86-05247 2G

Equivalent Formulations for Solute and Water Movement in Soils,
W86-05251 2G

SOIL WATER MOVEMENT
Groundwater Movement Studied,
W86-04983 2F

SOIL WATER POTENTIAL
Predictions of Soil-Water Potentials in the North-Western Sonoran Desert,
W86-04695 2G

SOIL WATER SUCTION
Determination of the Soil Water Budget From Suction Pressure Curves,
W86-04731 2G

SOILS
Simplified Method for the Extraction of the Metals Fe, Zn, Cu, Ni, Cd, Pb, Cr, Co and Mn from Soils and Sewage Sludges,
W86-05076 5A

SOILWATER MOVEMENT
Investigation of Water Movement in the Unsaturated Zone Under an Irrigated Area using Environmental Tritium,
W86-05210 2G

SOLID WASTE
Design and Performance of a Groundwater Treatment System for Toxic Organic Removal,
W86-05018 5G

SOLID WASTE DISPOSAL
Feasibility of Constructing a Waste-to-Energy Incinerator to Generate Electricity for a Colocated Wastewater Treatment Plant,
W86-05129 5E

SOLIDS
Adsorption of Lead and Zinc on Blast Furnace Iron Oxide Solids,
W86-05055 5D

SOLUTE TRANSPORT
Second-Order Approach for the Modeling of Dispersive Transport in Porous Media: 2. Application to Solute Motion in Pipes and Capillary Tubes,
W86-05206 5B

Field Study of Napropamide Movement through Unsaturated Soil,
W86-05221 5B

Equivalent Formulations for Solute and Water Movement in Soils,
W86-05251 2G

Solute Dispersion and Sediment Transport in Estuaries,
W86-05361 5B

Investigation of Material Transport and Load in Tidal Rivers,
W86-05362 5B

Comparison of Methods for Estimating Sulfate Export from a Forested Watershed,
W86-05389 5B

SOLVENTS
Benefits of Microprocessor Control of Curing Ovens for Solvent-Based Coatings.
W86-04818 5B

SORPTION
One-Dimensional Model of Chemical Diffusion and Sorption in Saturated Soil and Aquatic Systems,
W86-05390 5B

SOUTH AFRICA
Techniques Applied in Determining Sediment Loads in South African Rivers,
W86-04865 2J

Aspects of the Feeding Ecology of Turbin Water Zooplankton. In situ Studies of Community Filtration Rates in Silt-Laden Lake le Roux, Orange River, South Africa,
W86-05183 2H

SOUTH DAKOTA
Seasonal and Regional Variability of Parameters for Stochastic Daily Precipitation Models: South Dakota, U.S.A.,
W86-05257 2B

SPAIN
Construction of Spain's Cortes-La Muela Scheme,
W86-05000 8C

SPATIAL RANDOM FUNCTIONS
Statistical Inference of Spatial Random Functions,
W86-05254 2A

SPECIATION
Role of Speciation in Mercury Methylation in Sediments and Water,
W86-05395 5B

SPECTROSCOPY
NMR Studies of Crab and Plaice Metallothioneins,
W86-04761 5C

SPILLWAY GATES
Control of Spillway Gates During Floods,
W86-04993 8A

SPLASH EROSION
Field Measurement of Splash Erosion,
W86-04880 2J

SPOIL BANKS
Wind and Water Erosion of Waste Heaps at Concentration Plants for Potassium Production,
W86-04894 5B

Marine Benthos in Relation to Pore Water Chemistry and Sediment Geochemistry of Simulated Dredged Material,
W86-05152 5C

Vertical Migration and Mortality of Marine Benthos in Dredged Material: A Synthesis,
W86-05169 5C

SPRAY IRRIGATION
Upgrading with Spray Irrigation,
W86-04975 5E

SPRING WATER
Using a Filter to Remove Giardia Cysts,
W86-04735 5F

SPRINKLERS
Determination of the Parameters of Water Intake by Soil With the Energy Characteristics of Rain Taken into Account,
W86-04732 2G

SRI LANKA
Rainwater for Drinking in Sri Lanka,
W86-05145 3B

STABILITY ANALYSIS
Armor Layer Stability of Rubble-Mound Breakwaters,
W86-04988 8B

Leaching Tests of Heavy Metals Stabilized with Portland Cement,
W86-05054 5E

STAGE-DISCHARGE RELATIONS
Equations for Estimating Discharge in Steep Channels with Coarse Bed Material,
W86-04791 2E

Improvement of Ultrasonic Flowmeter in Rivers in Japan,
W86-04802 7B

STANDARDS
Viruses in Drinking Water,
W86-04978 5F

Ecologically Derived Guidelines for Managing Two New Zealand Lakes,
W86-05399 6E

STANDING CROPS
Differences in Standing Live and Dead Crops in Estuarine Marshes on Vancouver Island,
W86-05348 2L

STANDING WAVES
Laboratory Modeling of a Coastal Upwelling,
W86-04980 2L

STATISTICAL ANALYSIS
Daily Flow Statistics of Alaskan Streams,
W86-04784 4A

Disjunctive Kriging: 1. Overview of Estimation and Conditional Probability,
W86-05207 6A

Disjunctive Kriging: 2. Examples,
W86-05208 6A

Statistical Inference of Spatial Random Functions,
W86-05254 2A

STATISTICAL HYDROLOGY
Statistical Inference of Spatial Random Functions,
W86-05254 2A

STATISTICAL METHODS
Practical Guidelines for the Use of Zooplankton Length-Weight Regression Equations,
W86-05182 2H

Comparison of Several Methods for the Solution of the Inverse Problem in Two-Dimensional Steady State Groundwater Flow Modeling,
W86-05216 2F

STATISTICS
Daily Flow Statistics of Alaskan Streams,
W86-04784 4A

STOCHASTIC PROCESSES
Stochastic Analysis of Three-Dimensional Flow in a Bounded Domain,
W86-05215 2F

STOICHIOMETRY
Kinetics and Stoichiometry of SBR/Denitrification with a Primary Sludge Carbon Source,
W86-05036 5D

STORAGE RESERVOIRS
Salvaging a Water Reservoir,
W86-04739 8A

STORM DRAINS
Using the Fecal Coliform Test for Sewer and Storm Drain Maintenance,
W86-04687 5D

STORM FLOW
Storm Flow and Sediment Losses from Site-Prepared Forestland in East Texas,
W86-05224 4C

STORM RUNOFF
Ingenuity Solves the City's Drainage and Recreational Space Needs,
W86-04737 4A

Prediction of Surface Saturation Zones in Natural Catchments by Topographic Analysis,
W86-05226 2E

STORM SEEPAGE
Role of Subsurface Water Exfiltration in Soil Erosion Processes,
W86-04904 2J

STORM SEWERS
Solution to Residential Sewer Backups,
W86-04686 5D

Flow Measurement in Open and Closed Conduits of Gravitational Urban Storm Sewer Networks,
W86-04787 7B

STORM WASTEWATER
Lift Station Design,
W86-04959 8A

STORM WATER
State-Of-The-Art Update on Combined Sewer Overflow Control,
W86-05038 5D

STRATIFIED FLOW
Influence of an Artificial Hydraulic Regime on Water Quality in the Tidal River Lagan, Northern Ireland,
W86-05080 5G

Curvilinear Finite Element Model for Simulating Two-Well Tracer Tests and Transport in Stratified Aquifers,
W86-05213 2F

Comparative Study of the Green and Ampt Analysis for a Falling Water Table in a Stratified Profile,
W86-05218 2F

STRATIFIED LAKES
Wind-Forced Motions in Stratified Lakes and Their Effect on Mixed-Layer Shear,
W86-05279 2H

STREAM BIOTA
Relationship Between Microbial Activity of Stream Sediments, Determined by Three Different Methods, and Abiotic Variables,
W86-05202 5A

STREAM CHEMISTRY
Use of Stream Chemistry to Estimate Hydrologic Parameters,
W86-05227 2K

STREAM DISCHARGE
Hydrometric Cableways in the Yangtze Valley,
W86-04786 7B

STREAM FLOW
Long Term Prediction of the Extremes of River Bed Level Fluctuations,
W86-04909 2E

STREAM GAGES
Hydrometric Cableways in the Yangtze Valley,
W86-04786 7B

STREAMFLOW
Rising Air Float Technique for the Measurement of Stream Discharge,
W86-04799 7B

Erosion and Sediment Tranport Processes in Step-Pool Torrents,
W86-04907 2J

STREAMFLOW FORECASTING
Up-Dating of Discharge Rating Curves by Means of Mathematical Models,
W86-04789 7B

STREAMS
Daily Flow Statistics of Alaskan Streams,
W86-04784 4A

Nuclear Techniques for Measuring Sediment Transport in Natural Streams, Examples From Instrumented Basins,
W86-04849 2J

Some Problems Related to Sediment Transport Measurement in Steep Mountain Streams,
W86-04867 2J

Significance, Measurement, and Analysis of Sediment Discharges of Flashy Streams,
W86-04874 2J

Predicting pH, Alkalinity, and Total Acidity in Stream Water During Episodic Events,
W86-05250 5B

STRUCTURAL ENGINEERING
Effects of Water Interactions on Engineering Structures,
W86-05276 8B

STRUCTURE
Unusual Microorganisms Observed in New Zealand Hot Springs,
W86-05200 5A

SUBSIDENCE
Sinking Cities,
W86-05321 4B

SUBSTRATE SPECIFICITIES
Recent Developments in Hydrogen Management During Anaerobic Biological Wastewater Treatment,
W86-04746 5D

SULFATES
Acid Rain - A Further Look at the Evidence,
W86-04704 5B

Rapid Determination in Water of Chloride, Sulphate, Sulphite, Selenite, Selenate and Arsenate Among Other Inorganic and Organic Solutes by Ion Chromatography With UV Detection Below 195 nm,
W86-05302 5A

Comparison of Methods for Estimating Sulfate Export from a Forested Watershed,
W86-05389 5B

SULFITES
Rapid Determination in Water of Chloride, Sulphate, Sulphite, Selenite, Selenate and Arsenate Among Other Inorganic and Organic Solutes by Ion Chromatography With UV Detection Below 195 nm,
W86-05302 5A

SULFUR
Sulfur Oxides Control Technology Series: Flue Gas Desulfurization; Lime/Limestone Processes,
W86-04819 5D

Sulfur Oxides Control Technology Series: Flue Gas Desulfurization; Spray Dryer Processes,
W86-04831 5D

Flue Gas Desulfurization Inspection and Performance Evaluation: Manual.
W86-04832 5D

Operation and Maintenance Manual for Electrostatic Precipitators,
W86-04833 5D

SULFUR DIOXIDE
Effects of Acid Deposition on Crops and Forests,
W86-05415 5B

SULFUR DIOXIDE EMISSIONS
Acid Rain - A Further Look at the Evidence,
W86-04704 5B

SULFURIC ACID
Distribution of Acid Deposition in Germany,
W86-05413 5B

SULPHUR
Effect of Airborne Sulphur and Nitrogen Deposition on Aquatic and Terrestrial Heathland Vegetation,
W86-05416 5B

SURFACE FLOW
Surface Flow and Erosional Processes in Semi-arid Mesoscale Channels and Drainage Basins,
W86-04910 2J

SURFACE WATER
Sanitary Landfill Leachate Recycle,
W86-04971 5E

Controlling Toxicity: An Integrated Strategy,
W86-05013 5G

Organic Contamination: Whistling Past the Graveyard,
W86-05014 5G

Prediction of Surface Saturation Zones in Natural Catchments by Topographic Analysis,
W86-05226 2E

Occurence of Radioactivity in Public Water Supplies in the United States,
W86-05407 5B

SURFACE WATERS
Singlet Oxygen in Surface Waters. 3. Photochemical Formation and Steady-State Concentrations in Various Types of Waters,
W86-04720 2K

SURFACTANTS
Effects of Natural and Synthetic Surface Active Substances on the Electrochemical Reduction of Cadmium in Natural Waters,
W86-05334 5B

SURGE CHAMBERS
Underground Works at Kenya's Kiambere Project,
W86-05006 8A

SURGE TANK
Jones Fork Small Hydro Scheme,
W86-04727 8C

SURVEYS
Quantitative Technique for Estimating the Boundaries of Wetlands from Vegetation Data,
W86-05411 2I

SURVIVAL
Effect of Fluorides on Survival and Reproduction of Daphnia Magna,
W86-05024 5C

SUSPENDE SEDIMENTS
Accuracy of Estimating Basin Denudation Processes from Suspended Sediment Measurements,
W86-04864 2J

SUSPENDED LOAD
Investigation of Material Transport and Load in Tidal Rivers,
W86-05362 5B

SUSPENDED SEDIMENT
Development of Nuclear Sediment Concentration Gauges for Use on the Yellow River,
W86-04850 2J

In situ Measurements of Particulate Matter Transport in Rivers,
W86-04857 2J

Reliability of Suspended Sediment Load Data,
W86-04861 7C

Accuracy and Precision of Suspended Sediment Loads,
W86-04862 7C

Measurement of Debris Flow and Sediment-Laden Flow Using a Conveyor-Belt Flume in a Laboratory,
W86-04866 7B

Particle Size Characteristics of Fluvial Suspended Sediment,
W86-04934 5B

Temporal Variation of Suspended Sediment Properties,
W86-04935 5B

SUSPENDED SEDIMENTS
Latest Achievements in the Development of Nuclear Suspended Sediment Gauges,
W86-04851 2J

Continuous Measurement of Suspended Sediment in Rivers by Means of a Double Beam Turbidity Meter,
W86-04852 2J

Use of Turbidity Monitors to Assess Sediment Yield in East Java, Indonesia,
W86-04853 2J

Analysis of a Simple Suspended Load Integrating Sampler,
W86-04854 2J

Field Measurements of Suspended Sediment Concentration in the Surf Zone,
W86-04856 2J

Sediment Sampling in Rivers and Canals,
W86-04860 7B

Study of the Variability of Suspended Sediment Measurements,
W86-04863 7B

Measurement of Suspended Sediment and Bed Load in Sand Bed Channels and the Associated Problems,
W86-04873 2J

Significance, Measurement, and Analysis of Sediment Discharges of Flashy Streams,
W86-04874 2J

Sediment Quality Related to Discharge in a Mineralized Region of Wales,
W86-04929 5B

Influence of Season, Source and Distance on Physical and Chemical Properties of Suspended Sediment,
W86-04932 5B

Analysis of the Vertical Distribution of High Sediment Concentrations in the Yellow River and Studies of Methods of Observation,
W86-04936 2J

Phytoplankton Productivity in Turbid Waters,
W86-05177 5C

Role of Suspended Sediment in Irrigation Return Flow Chemistry, Southern Alberta,
W86-05211 5B

Water Discharge and Suspended Sediment Concentrations in the Amazon River: 1982-1984,
W86-05222 2E

SWAMPS
From Swamp to Lake: Recent changes in a Lowland Tropical Swamp,
W86-04697 5C

SWIMMING
Health Hazards Associated with Windsurfing on Polluted Water,
W86-04943 5C

TADJIK SSR
World's Highest Dam Conquers Harsh Environment,
W86-05002 8D

TALIHA MINI HYDRO
Implementing the Taliha Mini Hydro Scheme in Zaire,
W86-04726 8A

TASTE
Controlling Taste and Odor with Chlorine Dioxide,
W86-04733 5F

River Dee Scheme and Intake Protection Systems,
W86-04752 5F

TELEMETRY
Flow Measurement in Open and Closed Conduits of Gravitational Urban Storm Sewer Networks,
W86-04787 7B

Towards a Satellite-Based Hydrometric Data Collection System,
W86-04810 7B

Developments in Hydrometry in Central America and Brazil,
W86-04813 7B

District Metering,
W86-05316 7B

TELEOSTS
In Vivo Metabolism of Fenitrothion (0,0-dimethyl-0-(4-nitro-m-tolyl) phosphorothioate) in Fresh Water Teleost (Tilapia Mossambica),
W86-05268 5B

TEMPERATURE
Interactions of Temperature, pH, and Biomass on the Nitrification Process,
W86-05020 5D

TEMPERATURE EFFECTS
Effects of Temperature on the Acute Toxicity of PCP in the Midge Chironomus Riparius Meigen,
W86-04964 5C

Analysis of the Inshore Macrozoobenthic Community in Lake Naini Tal, UP, India,
W86-05172 2H

TEMPORAL DISTRIBUTION
Temporal Variation of Suspended Sediment Properties,
W86-04935 5B

Time Variation of Rn 222 Progeny Concentrations in Rainwater,
W86-05142 2B

TENSIOMETERS
Determination of the Soil Water Budget From Suction Pressure Curves,
W86-04731 2G

TEST WELLS
Monitoring Well Screen Influences on Direct Flowmeter Measurements,
W86-05026 7B

THEORETICAL ANALYSIS
Modeling and Performance of the Activated Sludge-Powdered Activated Carbon Process in the Presence of 4,6-Dinitro-o-Cresol,
W86-05136 5D

Distribution of Retention Times in Model Biological Filters Containing Packed Spheres,
W86-05329 5D

THERMAL EFFECTS
Influence of Temperature on Bacterial Development in Waters,
W86-05275 5F

THERMAL POLLUTION
Benthic Macroinvertebrate Community Structural and Functional Group Response to Thermal Enhancement in the Savannah River and a Coastal Plain Tributary,
W86-05089 5C

Synopsis of Analytic Solutions for the Temperature Distribution in a River Downstream from a Dam or Reservoir,
W86-05258 5B

THERMAL REACTIVATION
Thermal Reactivation of Activated Carbon with a Two-Stage Fluid Bed Reactor,
W86-05144 5D

THERMAL SPRINGS
Unusual Microorganisms Observed in New Zealand Hot Springs,
W86-05200 5A

THERMOCLINE
Monitoring Sebago Lake Water Quality Below the Thermocline,
W86-05027 5F

Limnological Observations on Rihand Reservoir (Uttar Pradesh) with Reference to the Physical and Chemical Parameters of its Water,
W86-05165 2H

THIN LAYER CHROMATOGRAPHY
Screening Complex Hazardous Wastes for Mutagenic Activity using a Modified Version of the TLC/Salmonella Assay,
W86-04709 5A

THOROSEAL
Salvaging a Water Reservoir,
W86-04739 8A

THYROID ACTIVITY
Impairment of Thyroid Activity in Sarotherodon Mossambicus Due to DDT Treatment,
W86-05267 5B

TIDAL HYDRAULICS
Dynamics of a Tidal Estuary: Estimation of the Principal Factors. (Estimation des Parametres Fondamentaux de la Dynamique d'un Estuaire a Marees),
W86-05170 2L

Analysis of a 24-Hour Cycle of Zooplankton Sampling in a Lagoon of the Po River Delta,
W86-05179 2L

TIDAL POWERPLANTS
Tidal Power Engineering in the USSR,
W86-05005 8A

TIDAL RIVERS
Standardization of Water Quality Information in a Tidal River,
W86-05356 5B

Investigation of Material Transport and Load in Tidal Rivers,
W86-05362 5B

TIME SERIES ANALYSIS
Binary Time Series Obtained from Continuous Time Point Processes Describing Rainfall,
W86-05249 2B

TIMOTHY
Effects of Fertilizer, Pig Manure, and Sewage Sludge on Timothy and Soils,
W86-05382 5E

TIRES
Tire Fire Oil: Monitoring a New Environmental Pollutant,
W86-04979 5A

TISSUE ANALYSIS
Environmental pH Influences Growth and Tissue Chemistry of the Submersed Macrophyte Vallisneria americana,
W86-05347 5C

TOPOGRAPHY
Prediction of Surface Saturation Zones in Natural Catchments by Topographic Analysis,
W86-05226 2E

TOXICITY
Influence of Different Substrate pH Values on the Performance of a Downflow Anaerobic Fixed Bed Reactor Treating a Petrochemical Effluent,
W86-04744 5D

Copper-Binding Proteins in Liver of Bluegills Exposed to Increased Soluble Copper under Field and Laboratory Conditions,
W86-04758 5C

Environmental Fate and Aquatic Toxicology Studies on Phthalate Esters,
W86-04765 5C

Freshwater Biological Monitoring: Keynote Address,
W86-04768 5A

Toxicity Testing with Freshwater Macroinvertebrates: Methods and Application in Environmental Management,
W86-04776 5A

Prediction of the Toxicity of Copper to Australian Freshwater Animals,
W86-04777 5C

Application of an Algal Assay to Assess Toxicity and Eutrophication in Polluted Streams,
W86-04780 5C

Microbial Mutagenicity Testing of Water Samples,
W86-04781 5A

Bacillus Subtilis/Microsome Rec-Assay for the Detection of Mutagens in Waters of a Municipal Wastewater Treatment Plant,
W86-04782 5A

Chronic Toxicity of 4-Nitrophenol to Daphnia magna Straus Under Static-Renewal and Flow-Through Conditions,
W86-04962 5C

Effects of Temperature on the Acute Toxicity of PCP in the Midge Chironomus Riparius Meigen,
W86-04964 5C

Accumulation and Metabolic Effects of Di-n-Butyltin Dichloride in the Freshwater Clam, Anodonta Anatina,
W86-04965 5C

Tire Fire Oil: Monitoring a New Environmental Pollutant,
W86-04979 5A

Controlling Toxicity: An Integrated Strategy,
W86-05013 5G

Effect of Fluorides on Survival and Reproduction of Daphnia Magna,
W86-05024 5C

Effects of Synthetic Polyelectrolytes on Selected Aquatic Organisms,
W86-05050 5C

Studies on the Acute Toxicity of Pollutants to Freshwater Macroinvertebrates: 3. Ammonia,
W86-05086 5C

Influence of Copper in Various Forms on Natural Phytoplanktonic Populations from the Saguenay River, Quebec, Canada. (Influence de la Speciation du Cuivre sur les Populations Phytoplanctoniques Naturelles de la Riviere du Saguenay, Quebec, Canada.),
W86-05162 5C

TOXIGENICITY
Impact of Physio-Chemical Stress on the Toxigenicity of Vibrio Cholerae,
W86-05105 5B

TOXINS
Organic Contamination: Whistling Past the Graveyard,
W86-05014 5G

Comparative Removal of Toxic Pollutants by Six Wastewater Treatment Processes,
W86-05016 5D

Design and Performance of a Groundwater Treatment System for Toxic Organic Removal,
W86-05018 5G

Nature of Dichlorvos Intoxication in a Freshwater Prawn, Macrobrachium Lamarrei (H. Milne Edwards),
W86-05412 5C

TRACE LEVELS
Determination of Carbonate Traces in High-Purity Water by Means of Chromatography,
W86-05281 5F

TRACE METALS
Gas-Chromatographic Elemental Analysis via Di(Trifluorethyl)Dithiocarbamato Chelates IX. Optimization of the Capillary-Gas-Chromatographic Determination of Trace Metals,
W86-04708 5A

Sorption of Trace Metals by Humic Materials in Soils and Natural Waters,
W86-04715 5B

Fate of Trace Metals in the Sediments of the New York Bight,
W86-04834 5B

Trace Metals in Mussels (Mytilus edulis) from the Waddenzee, Coastal North Sea and the Estuaries of Ems, Western and Eastern Scheldt,
W86-04967 5C

Evaluating Maturity and Metal Transfer of MSW Compost,
W86-04972 5E

Trace Metals In Marine Surface Sediments Of The Palos Verdes Shelf, 1974 TO 1980,
W86-05307 5B

Analytical Quality Control (AQC) for Monitoring Trace Metals in the Coastal and Estuarine Environment,
W86-05355 5G

Sediment Mobility and Its Contribution to Trace Metal Cycling and Retention in a Macrotidal Estuary,
W86-05363 5B

TRACERS
Advances in Hydrometry.
W86-04785 7B

Tracer Measurements in Lowland Rivers,
W86-04797 7B

Curvilinear Finite Element Model for Simulating Two-Well Tracer Tests and Transport in Stratified Aquifers,
W86-05213 2F

Use of Dyes and Proteins as Indicators of Virus Adsorption to Soils,
W86-05330 5B

Effect of Tracer Diffusion in Biofilm on Residence Time Distributions,
W86-05343 5D

Bacillus Phages as Tracers of Water Movement,
W86-05367 5B

TRAINING
Selecting Effective Software for Water and Wastewater Treatment Facilities,
W86-05319 5D

TREES
Water Table of Alder and Neighbouring Elm Stands in a Small Tributary Basin,
W86-05188 2I

TRENCHES
Wave Interaction with a Rectangular Trench,
W86-04987 8B

TRIBUTYL TIN
Impact of Tributyl Tin (TBT) Antifouling Paints on Molluscan Fisheries,
W86-05372 5C

TRICHLOROETHYLENE
Estimating Risk to Human Health,
W86-04977 5B

TRICKLING FILTERS
Comparative Removal of Toxic Pollutants by Six Wastewater Treatment Processes,
W86-05016 5D

Design of Trickling Filter Nitrification Towers,
W86-05021 5D

Evaluation of High Density Cross Flow Media for Rehabilitating an Existing Trickling Filter,
W86-05031 5D

Phosphorus Transformation in a Rapid Infiltration Column,
W86-05139 5D

Distribution of Retention Times in Model Biological Filters Containing Packed Spheres,
W86-05329 5D

TRIHALOMETHANE
Catalytic Effects of Ultraviolet Light and/or Ultrasound on the Ozone Oxidation of Humic Acid and Trihalomethane Precursors,
W86-05270 5D

TRITIUM
Flood Flow Gauging with Tritium in Southern Africa,
W86-04796 7B

Investigation of Water Movement in the Unsaturated Zone Under an Irrigated Area using Environmental Tritium,
W86-05210 2G

TROPHIC LEVEL
Thermal and Oxygen Conditions and the Chemical Composition of the Water in the Great Masurian Lakes,
W86-05194 5C

TROPHIC LEVELS
Automated Multispecies Biomonitoring Employing Fish and Aquatic Invertebrates of Various Trophic Levels,
W86-04775 5A

TROPICAL REGIONS
Analyses of Different Processes Governing Soil Erosion by Water in the Tropics,
W86-04878 2J

Seasonality of Bacterial Quality of Water in a Tropical Developing Country (Sierra Leone),
W86-05106 5A

TROUT
Cadmium Accumulation and Protein Binding Patterns in Tissues of the Rainbow Trout, Salmo gairdneri,
W86-04759 5C

Evaluation of the Toxic Components of Toxaphene in Lake Michigan Lake Trout,
W86-05400 5A

TUNISIA
Eutrophication in Northern Tunisia,
W86-05150 5C

TUNNEL CONSTRUCTION
Underground Works at Kenya's Kiambere Project,
W86-05006 8A

TUNNEL DESIGN
Optimum Capacity and Tunnel Diameter of Run-Of-River Plants,
W86-05007 8A

Design of Pervious Pressure Tunnels,
W86-05008 8A

TUNNEL HYDRAULICS
Design of Pervious Pressure Tunnels,
W86-05008 8A

TUNNELS
Tight Money Hampers Cleveland Sewer Jobs,
W86-04754 6C

Underground Works at Kenya's Kiambere Project,
W86-05006 8A

Unconfined Groundwater Flow Calculation Into a Tunnel,
W86-05298 2F

TURBIDITY
Continuous Measurement of Suspended Sediment in Rivers by Means of a Double Beam Turbidity Meter,
W86-04852 2J

Use of Turbidity Monitors to Assess Sediment Yield in East Java, Indonesia,
W86-04853 2J

Phytoplankton Productivity in Turbid Waters,
W86-05177 5C

Aspects of the Feeding Ecology of Turbid Water Zooplankton. In situ Studies of Community Filtration Rates in Silt-Laden Lake le Roux, Orange River, South Africa,
W86-05183 2H

Contact Flocculation-Filtration Of Low-Turbidity, Highly Coloured Acid Moorland Water,
W86-05303 5F

TURBIDITY REMOVAL
Turbidity Removal from Clay Suspensions by Use of Organic Polymeric Flocculants,
W86-05260 5D

TURBINES
Power from Mine Cooling Water,
W86-04703 8C

TURKEY LAKES
Temporal and Spatial Trends in Metal Loadings to Sediments of the Turkey Lakes, Ontario,
W86-05346 5B

TWO-LAYER FLOW
Hydraulics of Two Flowing Layers with Different Densities,
W86-04714 2E

ULTAVIOLET LIGHT
Catalytic Effects of Ultraviolet Light and/or Ultrasound on the Ozone Oxidation of Humic Acid and Trihalomethane Precursors,
W86-05270 5D

ULTRAFILTRATION
Economics of Membrane Treatment of Wastewaters Containing Firefighting Foam,
W86-04947 5D

ULTRAPURE WATER
Ultrapure Water in the Microelectronics Industry,
W86-05288 5F

ULTRASONICS
Improvement of Ultrasonic Flowmeter in Rivers in Japan,
W86-04802 7B

Experiences Gained During the Hydraulic Investigations on the Cooling Water System of a Thermal Power Station,
W86-04803 8C

Catalytic Effects of Ultraviolet Light and/or Ultrasound on the Ozone Oxidation of Humic Acid and Trihalomethane Precursors,
W86-05270 5D

ULTRAVIOLET RADIATION
Photodegradation of the Herbicide Glyphosate in Water,
W86-04961 5D

Study of Operational Ultraviolet Disinfection Equipment at Secondary Treatment Plants,
W86-05047 5D

Disinfection of Low Quality Wastewaters by Ultraviolet Light Irradiation,
W86-05049 5D

Oxidation of 2-Chlorophenol Using Ozone and Ultraviolet Radiation,
W86-05057 5D

Rapid Determination in Water of Chloride, Sulphate, Sulphite, Selenite, Selenate and Arsenate Among Other Inorganic and Organic Solutes by Ion Chromatography With UV Detection Below 195 nm,
W86-05302 5A

UNDERGROUND POWERPLANTS
Underground Works at Kenya's Kiambere Project,
W86-05006 8A

UNDERGROUND STORAGE TANKS
Groundwater Protection Starts Below the Surface,
W86-05063 'G

UNIFORM SOIL LAYER
Drainage from a Uniform Soil Layer on a Hillslope,
W86-05209 2E

UNIFORMITY COEFFICIENT
Method for Uniformizing the Stage-Discharge Relations of Stable River Beds and Its Application,
W86-04790 7B

UNITED KINGDOM
Application of Ozone for Water Treatment in the United Kingdom Current Practice and Recent Research,
W86-05059 5F

UNITED STATES
Acid Rain in Western Europe and Northeastern United States – A Technical Appraisal,
W86-05039 5B

UNSATURATED FLOW
Investigation of Water Movement in the Unsaturated Zone Under an Irrigated Area using Environmental Tritium,
W86-05210 2G

UNSTEADY FLOW
Flow Measurement in Open and Closed Conduits of Gravitational Urban Storm Sewer Networks,
W86-04787 7B

UP-FLOW ANAEROBIC SLUDGE BLANKET REACTOR
Kinetics of Anaerobic Purification of Industrial Wastewater,
W86-04745 5D

UPFLOW ANAEROBIC SLUDGE BED
Application of the Upflow Anaerobic Sludge Bed (UASB) Process for Treatment of Complex Wastewaters at Low Temperatures,
W86-05263 5D

UPWELLING
Laboratory Modeling of a Coastal Upwelling,
W86-04980 2L

URBAN AREAS
Sinking Cities,
W86-05321 4B

URBAN DRAINAGE
Monitoring Water Quantity and Water Quality in an Urban Basin,
W86-04807 7B

USER CHARGES
Summer Discount Methods in Sanitary Sewer Rate Structures,
W86-04684 6C

USSR
Techniques for Soviet Pumped-Storage Plant Construction,
W86-05003 8C

Large Concrete Dam Construction in the USSR,
W86-05004 8A

Tidal Power Engineering in the USSR,
W86-05005 8A

VALLISNERIA AMERICANA
Environmental pH Influences Growth and Tissue Chemistry of the Submersed Macrophyte Vallisneria americana,
W86-05347 5C

VANCOUVER ISLAND
Differences in Standing Live and Dead Crops in Estuarine Marshes on Vancouver Island,
W86-05348 2L

VARIED FLOW
Application of Functional Analysis to Optimization of a Variable Head Multireservoir Power System for Long-Term Regulation,
W86-05242 8C

VEGETATION
Quantitative Technique for Estimating the Boundaries of Wetlands from Vegetation Data,
W86-05411 2I

VEGETATION EFFECTS
Channel Adjustments to the Removal of Log Steps: an Experiment in a Mountain Stream,
W86-05409 4D

VERTICAL CIRCULATION
Diagnostic Study on the Vertical Circulation and the Maintenance Mechanisms of the Cyclonic Gyre in Lake Biwa,
W86-05094 2H

VERTICAL DISTRIBUTION
In Situ Pulse Light Fluorometer for Chlorophyll Determination as a Monitor for Vertical and Horizontal Phytoplankton Distribution in Lakes,
W86-05175 2H

VIBRIO
Impact of Physio-Chemical Stress on the Toxigenicity of Vibrio Cholerae,
W86-05105 5B

VIBRIO PARAHAEMOLYTICUS
Serotypes of Vibrio parahaemolyticus Isolates from Hydrobiologically Dissimilar Aquatic Environments,
W86-05062 5A

VIRGINIA
Salvaging a Water Reservoir,
W86-04739 8A

Bath County: The World's Largest Pumped-Storage Plant Commissioned,
W86-04996 8C

VIRUSES
Viruses in Drinking Water,
W86-04978 5F

Use of Dyes and Proteins as Indicators of Virus Adsorption to Soils,
W86-05330 5B

Chlorine Dioxide Reactivity with Proteins,
W86-05340 5F

Chlorine Dioxide Reactivity with Nucleic Acids,
W86-05341 5F

VOLATILE FATTY ACIDS
Kinetics of Anaerobic Purification of Industrial Wastewater,
W86-04745 5D

VOLATILE HYDROCARBONS
Analysis of Volatile Hydrocarbon Losses from Quiescent Water Solutions,
W86-05228 5B

VOLATILE ORGANIC COMPOUNDS
Volatile Organic Chemical Contamination of Groundwater Resources in the U.S.,
W86-05028 5B

VOLATILE POLLUTANTS
Fused Silica Open Tubular Column Optimized for the Analysis of Volatile Organic Pollutants,
W86-04985 5A

VOLATILITY
Benefits of Microprocessor Control of Curing Ovens for Solvent-Based Coatings.
W86-04818 5B

WADDEN SEA
Seasonal Fluctuations in the Biomass and Metabolic Activity of Bacterioplankton and Phytoplankton in a Well-Mixed Estuary: the Ems-Dollard (Wadden Sea),
W86-05181 2L

WAIGANI LAKE
From Swamp to Lake: Recent changes in a Lowland Tropical Swamp,
W86-04697 5C

WALES
Epipelic Algal Flora of the River Wye System, Wales, UK. 1. Productivity and Total Biomass Dynamics,
W86-05158 2H

WASHOFF
Permethrin Washoff from Cotton Plants by Simulated Rainfall,
W86-05385 5B

WASTE DISPOSAL
Sulfur Oxides Control Technology Series: Flue Gas Desulfurization; Lime/Limestone Processes,
W86-04819 5D

Remedial Action at Waste Disposal Sites (Revised): Handbook.
W86-04820 5D

Use and Disposal of Municipal Wastewater Sludge,
W86-04826 5D

Sulfur Oxides Control Technology Series: Flue Gas Desulfurization; Spray Dryer Processes,
W86-04831 5D

Flue Gas Desulfurization Inspection and Performance Evaluation: Manual.
W86-04832 5D

Operation and Maintenance Manual for Electrostatic Precipitators,
W86-04833 5D

Municipal Wastewater Sludge Combustion Technology,
W86-04835 5D

Sludge Incineration Facilities,
W86-04836 5D

Improving Sludge Incineration Methods,
W86-04837 5D

Cocombustion of Sludge and Solid Wastes,
W86-04838 5D

Emerging Technology,
W86-04839 5D

Process Design Manual for Land Treatment of Municipal Wastewater: Supplement on Rapid Infiltration and Overland Flow.
W86-04840 5D

Overland Flow,
W86-04842 5D

Leaching Tests of Heavy Metals Stabilized with Portland Cement,
W86-05054 5E

Monitoring and Evaluating Composting Process Performance,
W86-05130 5E

Safe Use of the Assimilative Capacity of the Marine Environment for Waste Disposal - Is it Feasible,
W86-05376 5G

WASTE DISPOSAL SITES
Remedial Action at Waste Disposal Sites (Revised): Handbook.
W86-04820 5D

WASTE MANAGEMENT
Sulfur Oxides Control Technology Series: Flue Gas Desulfurization; Lime/Limestone Processes,
W86-04819 5D

Sulfur Oxides Control Technology Series: Flue Gas Desulfurization; Spray Dryer Processes,
W86-04831 5D

Flue Gas Desulfurization Inspection and Performance Evaluation: Manual.
W86-04832 5D

Operation and Maintenance Manual for Electrostatic Precipitators,
W86-04833 5D

WASTE TREATMENT
Treatment, Waste Management and Cost for Removal of Radioactivity from Drinking Water,
W86-05282 5F

Bioassay System for Industrial Chemical Effects on the Waste Treatment Process: PCB Interactions,
W86-05312 5D

WASTE TREATMENT FACILITIES
Method for Evaluation and Procurement of In-Vessel Composting Systems,
W86-04741 5D

WASTES
Electroplating Industry.
W86-04823 5D

WASTEWATER
Septage Treatment and Disposal: Handbook,
W86-04828 5D

Improving POTW Performance Using the Composite Correction Program Approach: Handboodk,
W86-04830 5D

Model to predict BOD from COD values,
W86-04951 5A

Comparison of Muller-Kauffmann Tetrathionate Broth with Rappaport-Vassiliadis (RV) Medium for the Isolation of Salmonellas from Sewage Sludge,
W86-04994 5A

WASTEWATER DISPOSAL
Remedial Action at Waste Disposal Sites (Revised): Handbook.
W86-04820 5D

Evidence for Movement of Heavy Metals in a Soil Irrigated with Untreated Wastewater,
W86-05322 5E

WASTEWATER DISPOSAL

Effects of Fertilizer, Pig Manure, and Sewage Sludge on Timothy and Soils,
W86-05382 5E

WASTEWATER DIVERSION

Declining Lake Sediment Phosphorus Release and Oxygen Deficit Following Wastewater Diversion,
W86-05025 5C

WASTEWATER FACILITIES

Flow Measurement at Sewage Treatment Plants,
W86-04806 7B

Plate Seperation - Budding Conventional Technology,

TENNESSEE TECHNOLOGICAL UNIV., COOKEVILLE.
Automated Multispecies Biomonitoring Employing Fish and Aquatic Invertebrates of Various Trophic Levels,
W86-04775 5A

TEXAS A AND M UNIV., COLLEGE STATION. DEPT. OF RANGE SCIENCE.
Storm Flow and Sediment Losses from Site-Prepared Forestland in East Texas,
W86-05224 4C

TEXAS UNIV. AT AUSTIN. BUREAU OF ECONOMIC GEOLOGY.
Groundwater Flow and Sand Body Interconnectedness in a Thick, Multiple-Aquifer System,
W86-05214 2F

TEXAS UNIV. AT AUSTIN. DEPT. OF CIVIL ENGINEERING.
Daily Water Use in Nine Cities,
W86-05241 3D

TEXAS UNIV. AT DALLAS, RICHARDSON.
Ozone and Activated Carbon for Tertiary Wastewater Treatment,
W86-05269 5D

THESSALONIKI UNIV., SALONIKA (GREECE). SCHOOL OF TECHNOLOGY.
Analytical Solutions for Strip Basin Recharge to Aquifers with Cauchy Boundary Conditions,
W86-05108 2F

TOHOKU UNIV., SENDAI (JAPAN). BIOLOGICAL INST.
Water Table of Alder and Neighbouring Elm Stands in a Small Tributary Basin,
W86-05188 2I

TOHOKU UNIV., SENDAI (JAPAN). DEPT. OF CIVIL ENGINEERING.
Methanogenic Digestion Using Mixed Substrate of Acetic, Propionic and Butyric Acids,
W86-05345 5D

TOKYO INST. OF TECH. (JAPAN). DEPT. OF ENVIRONMENTAL CHEMISTRY AND ENGINEERING.
Turbidity Removal from Clay Suspensions by Use of Organic Polymeric Flocculants,
W86-05260 5D

Some Rheological Features of Concentrated Excess Activated Sludge of Thixotropic Nature,
W86-05262 5D

TOKYO UNIV. OF AGRICULTURE AND TECHNOLOGY (JAPAN). DEPT. OF FORESTRY.
Hydrological and Geomorphological Studies of Debris Slides on Forested Hillslopes in Japan,
W86-04906 2J

TORRENT AND AVALANCHE CONTROL RESEARCH INST., VIENNA (AUSTRIA).
Estimation of Extreme Sediment Transport from Torrential Drainage Basins in the East Alps,
W86-04924 4D

TOYABO CO. LTD., OTSU (JAPAN).
Reverse Osmosis Modules for Water Desalination,
W86-05259 3A

TRIER UNIV. (GERMANY, F.R.). ABT. FUER ANORGANISCHE UND ANALYTISCHE.
Photometric Determination of Boron in Ground- and Surface Water (Photometrische Bestimmung von Bor Im Grund- und Oberflachenwasser),
W86-04707 5A

TSUKUBA UNIV. (JAPAN). INST. OF BIOLOGICAL SCIENCES.
Fatty Acids in Lipids from Particulate Organic Matter in a Eutrophic Lake, Lake Nakanuma, Japan,
W86-05171 5C

TSUKUBA UNIV. (JAPAN). INST. OF GEOSCIENCE.
Role of Subsurface Water Exfiltration in Soil Erosion Processes,
W86-04904 2J

TUDOR ENGINEERING CO., SAN FRANCISCO, CA.
Jones Fork Small Hydro Scheme,
W86-04727 8C

UKAEA ATOMIC ENERGY RESEARCH ESTABLISHMENT, HARWELL (ENGLAND). CHEMISTRY DIV.
Measurement of Important Parameters Determining Aqueous Phase Diffusion Rates through Crystalline Rock Matrices,
W86-05297 5B

UNDERGROUND RESOURCE MANAGEMENT, INC., AUSTIN, TX.
New Approach to In-Situ Treatment of Contaminated Groundwaters,
W86-05286 5G

UNITED NATIONS DEVELOPMENT PROGRAMME, FREETOWN (SIERRA LEONE). RURAL WATER SUPPLY PROGRAMME.
Seasonality of Bacterial Quality of Water in a Tropical Developing Country (Sierra Leone),
W86-05106 5A

UNIVERSIDAD AUTONOMA DE BARCELONA (SPAIN). DEPT. DE QUIMICA ANALITICA.
Sequential Flow-Injection Determinations of Calcium and Magnesium in Waters,
W86-04989 5A

UNIVERSIDAD AUTONOMA DE BARCELONA (SPAIN). FACULTY OF SCIENCES.
Water Relations of Chromium VI Treated Bush Bean Plants (Phaseolus vulgaris) L. cv. Contender) under both Normal and Water Stress Conditions,
W86-04701 5C

UNIVERSIDAD AUTONOMA METROPOLITANA, MEXICO CITY. DEPT. OF HYDRAULIC ENGINEERING.
Modeling and Performance of the Activated Sludge-Powdered Activated Carbon Process in the Presence of 4,6-Dinitro-o-Cresol,
W86-05136 5D

UNIVERSIDAD COMPLUTENSE DE MADRID (SPAIN). DEPT. DE QUIMICA INDUSTRIAL.
Copper (2+), Zinc (2+), and Nickel (2+) Uptake by Activated Sludge,
W86-04755 5D

UNIVERSIDAD SIMON BOLIVAR, CARACAS (VENEZUELA). GRADUATE PROGRAM IN HYDROLOGY AND WATER RESOURCES.
Development of Drainage Networks,
W86-04921 4D

UNIVERSIDADE FEDERAL DE SAO CARLOS (BRAZIL). DEPT. OF ZOOLOGY.
Primary Production and Effects of Enrichment with Nitrate and Phosphate on Phytoplankton in the Barra Bonita Reservoir (State of Sao Paulo, Brazil),
W86-05157 5C

UNIVERSITY COLL., CARDIFF (WALES). DEPT. OF BIOCHEMISTRY.
Cadmium Accumulation and Protein Binding Patterns in Tissues of the Rainbow Trout, Salmo gairdneri,
W86-04759 5C

UNIVERSITY COLL., CARDIFF (WALES). DEPT. OF PLANT SCIENCE.
Epipelic Algal Flora of the River Wye System, Wales, UK. 1. Productivity and Total Biomass Dynamics,
W86-05158 2H

UNIVERSITY COLL. OF SWANSEA (WALES). DEPT. OF CHEMICAL ENGINEERING.
Effect of Nickel on Methane Production and Butyric Acid Utilization in a Downflow Fixed-Film Reactor,
W86-04743 5D

UNIVERSITY COLL. OF WALES, ABERYSTWYTH. DEPT. OF GEOGRAPHY.
Sediment Quality Related to Discharge in a Mineralized Region of Wales,
W86-04929 5B

UNIVERSITY OF EAST ANGLIA, NORWICH (ENGLAND). SCHOOL OF ENVIRONMENTAL SCIENCES.
River Mechanics,
W86-04750 2J

Evaporite Mineralogy Associated with Saline Seeps in Southwestern North Dakota,
W86-05128 3C

UNIVERSITY OF SOUTH FLORIDA, TAMPA. COLL. OF PUBLIC HEALTH.
Chlorine Dioxide Reactivity with Proteins,
W86-05340 5F

UNIVERSITY OF SOUTHERN CALIFORNIA, LOS ANGELES. DEPT. OF MECHANICAL ENGINEERING.
Laboratory Modeling of a Coastal Upwelling,
W86-04980 2L

UNIVERSITY OF STRATHCLYDE, GLASGOW (SCOTLAND). DEPT. OF CIVIL ENGINEERING.
Data Requirements for Sediment, Erosion and Transport Simulation,
W86-04876 7A

Sediment Modelling and Data Sources: A Compromise in Assessment,
W86-04922 2J

UNIVERSITY OF WALES INST. OF SCIENCE AND TECHNOLOGY, CARDIFF. DEPT. OF APPLIED BIOLOGY.
Toxicity Testing with Freshwater Macroinvertebrates: Methods and Application in Environmental Management,
W86-04776 5A

Studies on the Acute Toxicity of Pollutants to Freshwater Macroinvertebrates: 3. Ammonia,
W86-05086 5C

Bacillus Phages as Tracers of Water Movement,
W86-05367 5B

UNIVERSITY OF WESTERN ONTARIO, LONDON. GEOTECHNICAL RESEARCH CENTRE.
Two-dimensional Pollutant Migration in Soils of Finite Depth,
W86-05102 5B

UNIVERSITY OF WYOMING RESEARCH CORP., LARAMIE. WESTERN RESEARCH INST.
Growth and Photosynthetic Response of a Freshwater Alga, Selenastrum capricornutum, to an Oil Shale By-Product Water,
W86-05265 5C

Treatment of an In-Situ Oil-Shale Retort Water,
W86-05285 5F

UPPSALA UNIV. (SWEDEN). LIMNOLOGISKA INSTITUTIONEN.
Clearance Rates of Crustacean Macrofiltrators: The Nature of in situ Rate Depressions in a Fertilized Oligotrophic Lake in the Kuokkel Area, Northern Sweden,
W86-05154 5C

Availability of Phosphorus and the Species Composition of the Spring Phytoplankton in Lake Erken,
W86-05156 5C

UPSTATE FRESHWATER INST., INC., SYRACUSE, NY.
Phosphorus Deposition from the Epilimnion of Onondaga Lake,
W86-05280 2H

UTAH STATE UNIV., LOGAN. DEPT. OF AGRICULTURAL AND IRRIGATION ENGINEERING.
Basin-Wide Impacts of Irrigation Efficiency,
W86-05236 3F

UTAH UNIV., SALT LAKE CITY. COLL. OF HEALTH, PHYSICAL EDUCATION, AND RECREATION.
Infectious Diseases and Field Water Supply and Sanitation Among Migrant Farm Workers,
W86-04944 5C

UTRECHT RIJKSUNIVERSITEIT (NETHERLANDS). LAB. OF CHEMICAL ANIMAL PHYSIOLOGY.
Accumulation and Metabolic Effects of Di-n-Butyltin Dichloride in the Freshwater Clam, Anodonta Anatina,
W86-04965 5C

UTTAR PRADESH IRRIGATION RESEARCH INST. ROORKEE (INDIA).
Sediment Sampling in Rivers and Canals,
W86-04860 7B

VALLEY SANITARY DISTRICT, INDIO, CA.
Evaluation of High Density Cross Flow Media for Rehabilitating an Existing Trickling Filter,
W86-05031 5D

VICTORIA UNIV. OF MANCHESTER (ENGLAND). DEPT. OF ZOOLOGY.
Effectiveness of Sampling Strategies for Intertidal Monitoring,
W86-05358 7B

VIRGINIA DEPT. OF GENERAL SERVICES, RICHMOND. DIV. OF CONSOLIDATED LAB. SERVICES.
Tire Fire Oil: Monitoring a New Environmental Pollutant,
W86-04979 5A

VIRGINIA INST. OF MARINE SCIENCE, GLOUCESTER POINT.
Benthic Macrofauna Associated with the Oyster Reefs of the James River Estuary, Virginia, USA,
W86-05166 2L

VIRGINIA POLYTECHNIC INST. AND STATE UNIV., BLACKSBURG. CENTER FOR ENVIRONMENTAL STUDIES.
Freshwater Biological Monitoring: Keynote Address,
W86-04768 5A

Comparison of Biomonitoring Techniques for Evaluating Effects of Jet Fuel on Bluegill Sunfish (Lepomis macrochirus),
W86-04778 5C

VIRGINIA POLYTECHNIC INST. AND STATE UNIV., BLACKSBURG. DEPT. OF AGRONOMY.
Prediction of Available Zinc in Sewage Sludge-amended Soils,
W86-05387 5E

VIRGINIA POWER, WARM SPRINGS.
Bath County: The World's Largest Pumped-Storage Plant Commissioned,
W86-04996 8C

VIRGINIA UNIV., CHARLOTTESVILLE. DEPT. OF ENVIRONMENTAL SCIENCES.
Sinking Cities,
W86-05321 4B

VIZGAZDALKODASI TUDOMANYOS KUTATO INTEZET, BUDAPEST (HUNGARY).
Flow Measurement in Open and Closed Conduits of Gravitational Urban Storm Sewer Networks,
W86-04787 7B

Experiences Gained During the Hydraulic Investigations on the Cooling Water System of a Thermal Power Station,
W86-04803 8C

Flow Measurement at Sewage Treatment Plants,
W86-04806 7B

Latest Achievements in the Development of Nuclear Suspended Sediment Gauges,
W86-04851 2J

VOLGA INST. OF HYDRAULIC ENGINEERING AND MELIORATION, ENGEL'S (USSR).
Height and Speed of Capillary Rise of Water in Medium Loam Soils,
W86-04730 2G

VRIJE UNIV., BRUSSELS (BELGIUM). LAB. OF HYDROLOGY.
Tracer Measurements in Lowland Rivers,
W86-04797 7B

BEST COPY AVAILABLE

SELECTED WATER RESOURCES ABSTRACTS (SWRA) is produced by the Geological Survey, U.S. Department of the Interior, and published monthly by the National Technical Information Service (NTIS), U.S. Department of Commerce.

SWRA is available to Federal agencies and their contractors or grantees in water resources research upon request, citing contract or grant number and sponsoring agency. Write: Water Resources Division, U.S. Geological Survey, MS 425, Reston, VA 22092. The **SWRA Journal** is also available on subscription from NTIS, 5285 Port Royal Road, Springfield, VA 22161. Annual subscription rates for the North American Continent are: Journal only, $115, Journal and Annual Indexes, $145; Indexes only, $50. Other addressees, write for prices.

Some documents abstracted in this journal can be purchased from NTIS. Price codes are given in the entries and a current code-price conversion table is printed on the outside back cover. Other documents are available from originating organizations or authors as indicated in the citation.

WATER RESOURCES
ABSTRACTS

A monthly publication of the Geological Survey,
U.S. Department of the Interior

ANNUAL CUMULATED INDEXES TO VOLUME 19, 1986

PART 1 AUTHOR
ORGANIZATION
ACCESSION NUMBER

MARCH 3, 1849

The Secretary of the Interior has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department. Use of funds for printing this periodical has been approved by the Office of Management and Budget through September 30, 1987.

I

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering the wisest use of our land and water resources, protecting our fish and wildlife, preserving the environmental and cultural values of our national parks and historical places, and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to assure that their development is in the best interests of all our people. The Department also has a major responsibility for American Indian reservation communities and for people who live in Island Territories under U.S. administration.

PREFACE

Selected Water Resources Abstracts, a monthly journal, includes abstracts of current and earlier pertinent monographs, journal articles, reports, and other publication formats. These documents cover water resources as treated in the life, physical, and social sciences and the related engineering and legal aspects of the characteristics, supply condition, conservation, control, use, or management of water resources. Each abstract includes a full bibliographic citation and a set of descriptors which are listed in the **Water Resources Thesaurus.** The abstract entries are classified into 10 fields and 60 groups similar to the water resources research categories established by the Committee on Water Resources Research of the then Federal Council for Science and Technology.

Selected Water Resources Abstracts is designed to serve the scientific and technical information needs of scientists, engineers, and managers as one of several services of the Water Resources Scientific Information Center. The cumulative SWRA file from 1968 and monthly updates are available also in magnetic tape through lease from NTIS.

THE WATER RESOURCES SCIENTIFIC INFORMATION CENTER DOES NOT PROVIDE COPIES OF DOCUMENTS ABSTRACTED IN THIS JOURNAL. Sufficient bibliographic information is given to enable readers to order the desired documents from local libraries or other sources.

Comments and suggestions concerning the contents and arrangement of this bulletin are welcome.

AUTHOR INDEX

AALDERINK, R. H.
Quantification of Wind Induced Resuspension in a Shallow Lake,
W86-01230 1904 2H

ABADIE-MAUMERT, F. A.
Utilization of Ozone for the Treatment of Recyclable Papers,
W86-05540 1912 5D

ABAM, T. K. S.
Analysis of Stratigraphic Control on River Bank Failure,
W86-04748 1911 4D

ABBASI, S. A.
Examination of Environmentally Safe Levels of Zinc (II), Cadmium (II) and Lead (II) with Reference to Impact on Channelfish Nuria denricus,
W86-04661 1910 5C

Wastewater Treatment Using Aquatic Plants. Survivability and Growth of Salvinia molesta (Mitchell) Over Waters Treated with Zinc (II) and the Subsequent Utilization of the Harvested Weeds for Energy (Biogas) Production,
W86-05294 1911 5D

ABBENNEY-MICKSON, S.
Scaling the Exponential Soil-Water Diffusivity for Soils from Ghana,
W86-01659 1905 2G

ABBOTT, P. O.
Hydrology of Area 61 Northern Great Plains and Rocky Mountain Coal Provinces, Colorado and New Mexico,
W86-02934 1908 2E

Selected Climatological and Hydrologic Data, Raton Basin, Huerfano and Las Animas Counties, Colorado, and Colfax County, New Mexico,
W86-02839 1907 2E

Water-Resources Appraisal of the Upper Arkansas River Basin from Leadville to Pueblo, Colorado,
W86-03025 1908 2E

ABDEL-DAYEM, M. S.
Artesian and Anisotropic Effects on Drain Spacing,
W86-05927 1912 4B

ABDEL-GAWAD, S. M.
Numerical Simulation of Rectangular Settling Tanks,
W86-01390 1905 5D

ABDEL-GHAFFAR, A. M.
Nonlinear Dynamic Analyses of an Earth Dam,
W86-01088 1904 8D

ABDUL-JABBAR, A. S.
Relationships Between Crop Water Stress Index and Alfalfa Yield and Evapotranspiration,
W86-00468 1902 2I

ABE, I.
Relation Between Activated Carbon Adsorption and Water Quality Indexes,
W86-06160 1912 5D

ABE, S.
Effects of Cross Dykes on Alternate Bars,
W86-05641 1912 2J

ABE, T.
Policy Relevant Information and Public Attitudes: Is Public Ignorance a Barrier to Nonpoint Pollution Management,
W86-06017 1912 5G

ABEELE, W. V.
Distribution of Plutonium and Americium Beneath a 33-yr-old Liquid Waste Disposal Site,
W86-04416 1910 5B

ABELIOVICH, A.
Nitrification of Ammonia in Wastewater. Field Observations and Laboratory Studies,
W86-06150 1912 5D

ABER, J. D.
Factors Controlling Mass Loss and Nitrogen Dynamics of Plant Litter Decaying in Northern Streams,
W86-00637 1903 2K

ABIJOROH, D.
Public Health Significance Of Industrial Pollution In Zaria, Nigeria,
W86-05301 1911 5C

ABOITIZ, M.
Stochastic Soil Moisture Estimation and Forecasting for Irrigated Fields,
W86-04172 1910 2G

ABRAHAM, M.
Serotypes of Vibrio parahaemolyticus Isolates from Hydrobiologically Dissimilar Aquatic Environments,
W86-05062 1911 5A

ABRAHAMS, A. D.
Objective Identification of Meanders and Bends,
W86-05117 1911 2E

ABRAMOV, A. M.
Determination of the Parameters of Water Intake by Soil With the Energy Characteristics of Rain Taken into Account,
